

Retina Imaging Policy

We pride ourselves on providing our patients with the best possible standard of care.

Because of this, we now perform the optomap® Retinal Exam on all of our patients over the age of 12. The Doctors strongly believe that the optomap Retinal Exam helps to make your comprehensive eye exam more thorough and recommend this be done at each vision examination. The optomap provides the doctor with an image of the retinas in the back of your eyes with a much wider view than could be seen otherwise, allowing us to detect eye disease more easily.

Today, we will perform this fast, easy, and comfortable screening test as part of your annual comprehensive examination. The \$30 fee for this procedure is not covered by all insurance companies and could be in-addition to your examination fee or vision plan co-pay.

By offering the optomap®, the doctor may not need to dilate your eyes. Any questions you have about the optomap® Retinal Exam can be directed to the doctor when the images are reviewed during your examination.

Thank you for allowing us to monitor the health of your eyes. We strongly believe that this additional test allows us to diagnose problems which would be more difficult to diagnose otherwise.

Sincerely-

Drs. Cripe, Stephens, Stickel, and McGuire
