

Berwick, Melbourne Contemporary Driveway

Applicator:
Morgan Paving Systems

Project size:

40 square metres

Coatings used:
"Autumn" with "Sunset"
border SuperStone

This contemporary home benefited from the addition of a stunning surface treatment to its bland concreted driveway. SuperStone™ - the hard wearing, flexible, natural stone finish is the ideal fusion of style and function.

An impressive border was created with the use of "Sunset" on the perimeter highlighting the "Autumn" centre.

Gold Coast Water Front Walkway

Applicator:

Morgan Paving Systems

Coatings used:

"Autumn" and "Alpine"
SuperStone

This prestigious riverside property on the Gold Coast received an impressive architectural re-development with a contemporary feel. The transformation included the resurfacing of all exterior horizontal surfaces including walkways, stairways and side paths. A challenge in the project was working with the combination of "rigid" concrete and "flexible" asphalt surfaces. SuperStone™ was selected to deliver a continuous surface over the different substrates. The specially formulated resin binding the stone offers the optimum combination of flexibility, bond strength and UV stability. A blend of "Autumn" and "Alpine" natural coloured stone was selected to complement the surroundings.

North Sydney Traditional Driveway

Applicator:

Morgan Paving Systems

Project size:

350 square metres

Coatings used:

Autumn SuperStone

This private home is a heritage listed property in northern Sydney. When renovations were planned, all works were required to meet the codes of North Sydney Council and the stringent heritage listing requirements as managed by City Plan Services. A traditional crushed rock appearance was called for.

The landscape architects Taylor Bremmer selected SuperStone™ in "Autumn" for its natural stone appearance laid over an asphalt base for the optimum marriage of function and aesthetic appeal.
