SCOPE F-LINK RADIO LINKING FOR CONTROL PANELS

F-Link provides monitored radio linking between fire control panels. A system consists of two or more F-Link units working together to form a mesh network with each unit operating as both a transmitter and receiver. The radio link between units is monitored for faults in accordance with the relevant sections of BS5839-1:2017 (24.2b) and BSEN54-25:2008 (4.2.6).

There is an additional output on the Master unit for connection to an optional paging transmitter, which sends alarm and fault messages to pocket pagers.

The worlds most advanced wireless fire solution

The Hyfire system raises wireless fire detection and alarm systems to new levels of reliability and flexibility. The system utilises the latest wireless technologies to provide rapid, yet economic wireless fire system installations with the minimum of disturbance to the surroundings.

With over 1, 000, 000 devices installed worldwide, an established wireless protocol and an impressive list of international third party approvals and accreditations, designers and installers can feel confident that they are choosing a system with a proven record.

With its fully wireless or hybrid capability and an impressive range of field devices the system lends itself easily to a wide variety of applications.

The Hyfire system is equally at home protecting a sensitive heritage building, extending an existing wired system in a busy hotel environment or providing temporary protection for a building site.

Works with Haes Elan control panels when ordered with Vega protocol

Electro-Detectors

Zerio Plus

With 240 devices across a maximum of 100 zones, the Zerio Plus system offers the perfect solution for small domestic buildings up to large commercial premises.

Setting the system up could not be simpler. Each device is programmed onto the system using a clearly laid out user-friendly menu structure. There is no need to connect the device with a programming lead, as the configuration is achieved by radio.

Location descriptions can be added by using a PC or simply programmed using a standard PC keyboard plugged into the panel or for a single device the in-built keypad.

With analogue detector functionality and complex multi-path

fault tolerant signalling, the system minimises false alarms whilst providing maximum protection for the occupants of a building. In order to increase the radio range of the system, either wired or radio booster panels can be installed at appropriate positions.

Third party approved to EN54 Part 25.

HAESCOMM EMERGENCY VOICE COMMUNICATION SYSTEM

The Haescomm EVCS concept covers **Fire Telephone** and **Disabled Refuge Systems**, as well as integrating **Emergency Assist Alarm Systems** in a single solution.

The use of networking in every controller ensures scalability and removes redundancy on sites allowing them to evolve from single stand alone systems to complex site wide campus scenarios.

REFUGE ALARM

HAESCOMM TMS TOUCH SCREEN MASTER STATION

The HC-TMS network touch-screen controller has an integrated 2 to 8 line exchange and power supply, allowing control and connectivity in a single unit.

It can also integrate with HC-228 units. By using a touch screen, the operation of the panel is user friendly and intuitive.

- ✓ 4.3" full colour touch screen
- ✓ Integrated Assist Call with acknowledge
- ✓ Expandable from 2 to 512 lines with 64 network devices

wireless technology

XPander is a system in which individual detectors, call points and alarm devices communicate with the XP95 loop by radio signals. An interface is connected to the loop in the same way as any other interface, such as an Input/Output Unit.

Every XPander device is assigned an address and this address is recognised by the control panel in the same way as the address of any device connected directly to the loop wiring.

OSID BEAM DETECTORS

Open-area Smoke Imaging Detection

3D Volumetric Coverage

Open-area Smoke Imaging Detection (OSID) by Xtralis is a new innovation in beam smoke detection technology.

Advanced optical imaging technology provides a low cost, reliable and easy-to-install solution that overcomes typical beam detection issues such as alignment difficulties.

VESDA ASPIRATING SMOKE DETECTION

The worlds No. 1 brand of Aspirating Smoke Detector

VESDA by Xtralis very early warning smoke detectors provide the earliest warning of a potential fire.

- ✓ Telecommunications facilities
- ✓ Server rooms
- ✓ Financial data centers
- ✓ Clean rooms

VESDA-E VEA ADDRESSABLE ASPIRATING SMOKE DETECTORS
NEW

The VESDA-E VEA series of detectors combine VESDA reliability and early warning smoke detection with pinpoint addressability and a variety of annunciation options that truly surpass traditional spot detectors. They use patented air sampling points and multi-channel microbore air-sampling.

As a multi-channel addressable system, the VEA detector is able to divide a protected space into sampling locations, enabling the localization of potential sources of fire for faster incident response.

Please contact our sales team for more details

VESDA-E VEU ASPIRATING SMOKE DETECTORS
NEW

The VEU aspirating smoke detectors are the premium detector of the VESDA-E range. An ultra wide sensitivity range, 15 times greater than VESDA VLP, and provision for more sampling holes provide an increased coverage in high airflow applications by at least 40%.

NEW

Introducing Signaline FT-EN - Signaline FT-EN is a revolution for linear heat detection. Approved to EN54 part 28, Signaline FT-EN uses the latest in heat sensitive polymer technology to offer users fast and reliable fire detection.

Signaline LocatorPlus-EN

- 2 x Alarm Zones
- 1000m of Signaline FT-EN cable per zone
- Automatic alarm indication display
- Alarm relay contact

Signaline FT-EN Linear Heat Detector

- 78°C or 88°C alarm temperature
- Low smoke zero Halogen
- UV stable and chemical resistant
- Up to 1000m per zone

Signaline FT-EOL-EN

- Dual zone end of line unit
- Alarm test push button
- Fault alarm switch
- IP66 rated

Signaline FT-EN low smoke zero halogen linear heat detection cables are designed to be UV and corrosive resistant, meaning they can be used in the harshest of environments. The new LocatorPlus-EN monitoring module has two separate zones, each capable of connecting up to 1000 metres of cable.

Completing the installation is easy with the Signaline FT-EOL-EN. This end of line monitoring device comes complete with a fault and alarm test switches meaning live heat testing is no longer required.

X10 INDUSTRIAL SOUNDER & SOUNDER BEACONS

The new X10 industrial sounder, and sounder beacon range from Eaton are tough and durable signalling solutions, designed to meet the challenges within the harshest of environments.

Powering Business Worldwide

Silicone rubber seal and labyrinth sealing edges for protection from dust and high pressure water

The X10 sounder and sounder beacon range has been specifically designed for installation in tough industrial environments. Its silicone rubber seals and labyrinth sealing edges deflect water and protect against dust ingress. As a consequence, the X10 range is rated to IP66 and IP69k, making it suitable for wash down areas including food handling areas and aggregate processing plants such as cement works.

Wide range of options. Simple customisation to suit your needs.

Available in over 100 combinations X10 is specified by you and your signalling requirements. Choose between 3 housing sizes, 4 housing colours, 6 modular colour LED beacons and 102 tones.

SCORPION DETECTOR TEST EQUIPMENT

scorpion®

Scorpion is a new, innovative solution for testing smoke detectors and aspirating detection systems installed in hard-to-access locations. A Scorpion head unit is a smoke generator installed next to the detector. When required it generates smoke which is directed towards the detector providing a safe functional test.

No more struggling with those hard-to-access detectors. No access? No excuses

Do you have sites with hard to access detectors? Do you sometimes turn away service contracts because of the potential cost of having to hire specialist equipment or services in order to test devices in lift shafts, void spaces or on high ceilings?

Scorpion could be the ideal solution for you and your clients.

GUARDIAN CARE HOME SWING FREE ELECTRO MAGNETIC DOOR CLOSER

Guardian

by EXIDOR

NEW

Care Home Residents Door Closer....

Guardian by Exidor is a unique swing free door closer, developed specifically to meet the needs of care home facilities. In a class of its own the Guardian offers specific features that reduce the risk of injury to residents as well as eradicating the need to wedge doors open.

ANTI-SLAM FINGER PROTECTION:

The swing free mode of a closer can allow a door to slam shut. Regardless as to whether this is accidental, deliberate or just caused by a draught, it poses a real risk to frail residents and care home workers alike. Exidor's Guardian closer has been developed with an anti-slam function which controls and slows the motion of the door.

DRIFT RESISTANCE:

If a door is unbalanced it can naturally swing open or closed, or it can swing with a draught. This can result in a resident wedging the door open and invalidating it as a fire door. The Guardian closer offers a low level control on the door, which stops it from drifting from its open position, at the same time as allowing it to operate freely to the user.

The Guardian door closer is the only unit on the market specifically designed to meet the needs of residential care facilities.
