Acro's ladder hook is a must have for safety. The ideal tool for climbing on a roof more safely; it is especially helpful when working with weak decking, wet or icy surfaces, and steep pitches. Secure almost any ladder to your roof simply by attaching Ladder Hook to a ladder, rolling them up the roof and flipping it over so the hook sits on the opposite peak. The Swivel head angles across roofing contours for maximum contact surface. The reinforced rod around the hook results in a 300 lb. Capacity; only one hook is needed per ladder. When used with an extension ladder; only use 1 section to assure it sits properly flat on the roof surface.
