

PRESS RELEASE

Australia's Leading Engine Remanufacturer Opens 2017 Apprenticeship Intake

Australia's largest and one of the world's leading remanufacturers of automotive, heavy diesel and industrial engines and cylinder heads, HM Gem Engines, has opened its apprenticeship application intake for 2017.

Servicing automotive, heavy diesel, transport, industrial and marine clients throughout Australia the company will take up to ten apprentices in the coming year for placement in the Dandenong main workshop or one of the ten satellite operations throughout Victoria, South Australia and Australia's eastern seaboard.

Apprentices will be under the supervision of some of Australia's most experienced tradesmen in this field and will receive high levels of engineering training on a broad range of the world's leading names in engines and components using some of the most advanced machinery and equipment available.

HM Gem Engines is privately owned and has an outstanding employment record with a strong family ethos employing many long serving highly skilled personnel. The company has received the Prime Ministers 'Employer of the Year' award on no less than four occasions and was acknowledged as the 'Best Engine Reconditioner' in the 2016 VACC inaugural Awards to Industry.

"Successful applicants will have a passion for engineering perfection working with fine tolerances with a strong interest in remanufacturing some of the most complex engines and components back to original specifications," said HM Gem General Manager Dean Taylor. "Our preference is for applicants to have Year 12 certificate or as a minimum Year 11, as an apprenticeship opens up an excellent career path with the company and within the industry," he said.

Founded in 1969, HM Gem Engines is today a QA accredited engine remanufacturer to ISO9001 status employing in excess of 200 personnel within the group and has an on-going commitment to training tradesmen for the future of the industry.

Young people aspiring to become tradesmen of the future in a dynamic automotive and commercial service industry should contact their nearest HM Gem Engine outlet.
