Aceable final test answers

How many questions are on the aceable test. Ace final exam. Aceable ohio final exam answers. Aceable final exam answers.

When it comes to user-experience, Aceable traffic schools can't match up to theirs, but having the answers ready makes it quicker. Below are the level assessment and final exam answers: The correct position to adjust your rearview mirror is Sitting up straight and looking straight ahead. If you need to change the radio station, wait Until the road is clear. Following other drivers too closely is NOT an example of aggressive driving. Warning lights are NOT considered a driving distraction. Aggressive drivers can be dangerous because they drive recklessly. The time period when drivers are most at risk of driving while drowsy is 12 AM - 6 AM Areas that cannot be seen by the driver are called Blind spots. You are 23 times more likely to crash if texting while driving. Inability to focus, yawning, and drifting between lanes are signs of Drowsy driving. Your sense of Sight is the most crucial sense for driving. Emma should Check her side mirrors before driving forward when the light turns green. Broken yellow lines separate One-lane roads where you can't pass. You may turn left on red When you're in a residential area. The only time you should enter two-way left turn lanes placed in the middle of two-way roads is To make a safe left turn. At the sight of this, Stella must Slow down to watch for pedestrians before crossing. Railroad warning signs warn If we are approaching or next to a railroad. This sign indicates The road ahead is only for 4-wheel drive vehicles. In a lane with this sign, don't switch lanes. Only high-occupancy vehicles can use it in the morning, but not at other times. You won't get a ticket from just anyone; only police officers can give them out. If you see this sign on a two-lane road, be aware that the number of lanes might soon be reduced, causing merging traffic. No speeding up is needed; instead, be cautious and speed down if possible. The road will become much narrower soon. You can avoid getting points for a traffic violation by taking traffic violator school or doing community service. You have 60 days to register your newly purchased vehicle. BAC stands for Blood Alcohol Concentration. Other financial responsibilities of car owners include registration, insurance, and gas, but not organ and tissue donations. If pulled over by an officer, stop in the right shoulder and cooperate. Not having car insurance is illegal. Liability insurance covers expenses caused by others under your policy. The court will suspend a minor's license for one year if convicted of using alcohol or controlled substances while driving. Possessing a fake ID might get your license suspended. Don't fail to change your oil regularly, or you might face suspension. On the highway, an hour before sunset, turn on your headlights when you can barely see a vehicle 500 feet ahead. The gearshift lever is usually located on the center console or steering column in an automatic transmission vehicle. ABS stands for Antilock Brake System. The windshield wiper and washer controls are often found on one switch. A good way to prevent car break-ins is not to leave valuables inside. Change your oil every 10,000 miles. An old car is more likely to be stolen than a new one. You know this because When your tires are worn. You hear a squealing noise while braking. After 3,000 miles. The warning light on your dashboard comes on. Replace the pads in your disc brakes when one of these conditions occurs. The display that counts the number of miles a vehicle has driven over its lifetime is called the odometer. To turn right, push the signal lever down. Pete's mother has a physical disability. He borrows her car to go to the grocery store and parks in one of the spaces reserved for customers with disabilities up front. No, he should not park there as it is reserved for people with disabilities, not their drivers. To avoid highway hypnosis, stop every 2 hours or 100 miles, don't drive more than 8 hours a day. If the road becomes wet or crowded, decrease your following distance to maintain safety. The acceleration lane on expressways is used for leaving the freeway. Most fatal crashes that involve speeding happen when driving on highways, not just freeways. When parallel parking, first pull up even with the front car, about two feet out from the space. The suggested safe following distance for drivers is 4 seconds or more. To avoid accidents, good defensive drivers steer clear of other driver's blind spots. Before changing gears to reverse, have a clear view of the rear window and ensure you're not in anyone else's path. At a 4-way stop, drivers who arrived first should go next. If your vehicle overheats, turn off the AC but do not remove the radiator cap as it can cause further damage. You should also pull over to safety. Your engine might be flooded if you smell gasoline while driving. For recovery from hydroplaning, apply gradual pressure to brakes to regain control. You shouldn't turn off your car if the accelerator sticks because it will affect your ability to use power steering and your vehicle's stability. You can never be held liable for trying to help someone in need. When driving in fog, avoid using high-beam headlights as they can make it difficult for other drivers to see. Instead, use low-beam headlights or wait until the visibility improves. Driving on icy roads will affect your stopping distance and increase the risk of accidents. You should give more space to bicyclists, pedestrians, and motorcyclists in bad weather because their ability to stop or maneuver is compromised. Always take risks. You must do all of the following when aiding the injured in a crash EXCEPT: refrain from lifting or moving the victim unless absolutely necessary, stop serious bleeding with thick cloths, call an ambulance, and move the victim. Which zone does your vehicle occupy? The 6th zone is incorrect; instead, consider the spin zone as a humorous option. Avoid hitting animals on the road at all costs. Bicyclists must always ride as close to the right curb or edge of the road as possible, with no exceptions. Pedestrians who are drinking or under the influence of alcohol and/or drugs should stay off the streets altogether. When you see a school bus in the opposite lane dropping off students without a median, it's okay to go once the red lights turn off, but only if there's no other traffic around. If you approach a horse on the road while driving, you shouldn't honk your horn so it will get out of the way; instead, follow any orders given by the animal's owner and avoid making sudden movements. A dog is allowed to ride in the bed of a truck as long as it's properly secured. Bike crashes are most common when the driver turns in front of the path of a biker or fails to give a biker the right of way at an intersection. When stopped in an intersection at a red light, if you're in the lane left of a semi-truck, be on the lookout for the truck making a wide left turn. A pedestrian may walk against traffic (on the left side of the street) if there aren't sidewalks available. Only illegal drug use can negatively alter your vision and cause a crash. The two major drug categories are stimulants and depressants. Alcohol is a depressant that affects coordination, judgement, perception, and emotional state. A consequence of refusing a law enforcement officer's request to take a breathalyzer or blood test is that your driver license will be automatically suspended. Drinking one drink can impair your ability to drive. The most common drug (besides alcohol) found in crashes involving impaired drivers is marijuana. If you drive with a BAC level of 0.08% or more (or any measurable amount if under 21), your driver license will be suspended. Even if you're not convicted in court for driving under the influence (DUI), a breathalyzer is still an important tool that measures your blood alcohol content. It's essential when it comes to drinking and driving. For those under 21, there's a zero-tolerance policy when it comes to driving after consuming alcohol or drugs. Both prescription and over-the-counter drugs can impair your ability to drive safely. On packed snow, it's best to drive at normal speed. When changing lanes, make sure to look over your shoulder in the direction you plan to move. The most common factor in traffic collisions is violating stop signs and signals. When driving, remember that broken white lines mean you can pass when it's safe. If someone's drinking, the best course of action is to ensure they have a sober friend or return safely. There #####ARTICLE Circular traffic patterns require attention to avoid congestion by maintaining sufficient distance from the vehicle ahead before exiting an intersection. Be cautious not to tailgate, follow too closely, or drive at high speeds within a roundabout. Additionally, refrain from passing when there's a solid double yellow line in your lane. Adjusting the radio station is best done while driving on streets with low speed limits or when there are no nearby cars. It's also acceptable when stopped at a red light. The acronym BAC stands for Blood Alcohol Concentration, not Blood Alcohol Crime or other options. A vehicle's tachometer measures revolutions per minute (RPM), not tacos, fuel level, or miles per hour (MPH). Passing another vehicle is generally not allowed within 100 feet of an intersection or on curves and hills with a double solid yellow line. To counter aggressive driving, increasing your following distance, planning ahead, and not tailgating are good methods; limiting your following distance to less than one second is not. To give yourself time to brake or maneuver, keep a safe cushion of space around you, not an egg timer, other drivers alongside you, or a warm blanket. When a pedestrian is in the crosswalk, they have the right of way, not the driver or whoever has the green light.
