Exide Global

- Executive Offices
- Manufacturing
- Primary Distribution Centres
- Recycling Plants

Exide Batteries parent company, Ramcar, founded in 1919, has evolved into a world class stored electrical energy solutions provider of automotive, motorcycle, deep cycle, motive, and industrial applications and a recycler of Used Lead Acid Batteries (ULAB). It operates in 38 countries around the world and is supported by its various affiliates and exclusive suppliers:

FUNCTION	COUNTRY	CAPABILITY
Manufacturing	USA Philippines	Batteries Batteries
Recycling	Philippines Malaysia	ULAB's ULAB's
Engineering	Philippines	R&D, Tool-making, Process design
IT	Philippines	Customised solutions
Sales & Distribution	Philippines Malaysia Australia New Zealand USA	Sales, Service, Boost charging, OCM Supply.

Exide Batteries has a proud Australasian heritage dating back to 1935 and continues to be market leaders through implementation of specifically designed products and programs for our local market. We utilise leading edge technology to provide ultimate durability delivering consistency in performance, making Exide the right choice for the Australian and New Zealand automotive industry.

Exide Batteries Australiasia

Our vast distribution network of sales, distribution and ULAB collection facilities provides security to our customers in delivering superior service, supply and responsiveness.

Key Partnerships

Driving quality & technological leadership

As a leading supplier to Original Equipment Manufacturers (OEM) we continually work with our partners to deliver design, technology & quality (DTQ) in producing the highest performing batteries for today's car parc, ahead of time for the Aftermarket.

Our long standing partnerships with both Holden & Toyota OEM and to the majority of all the other past Australian & New Zealand OEM manufacturers, Exide has been challenged with continually exceeding quality & performance demands that flow through to our broader product range.

Exide Batteries prides itself on designing and manufacturing a leading edge comprehensive range of products, built using its vast intellectual property and experience, obtained with over 60 years of partnering with our OEM customers both locally and overseas.

The company policy of protecting our treasured environment is supported by our own Recycling Plant, which generates the necessary materials from Used Lead Acid Batteries (ULAB's). Approximately 80% of our products are manufactured using recycled materials.

Mitsubishi Product Excellence

Exide Batteries is an accredited ISO9002 supplier (certified in 1992) and holder of ISO/TS16949:2002, (certified in 1995) and covers the Quality Management System for design, manufacturing, sales & distribution of lead acid batteries. Unlike many of our competitors, Exide determine the Australian and New Zealand conditions, providing you our customer with specific battery ranges and solutions that suit our region.

We also make a genuine commitment to our staff in the form of career path planning and ongoing company-wide improvement training program. We recognise that staff at all levels have a critical role to play in delivering our values that are in alignment with customer driven requirements. We call this "Exide Pride....everybody, everyday".

Exide Batteries has a commitment to "Power the Future" through the delivery of Enhanced Performance, Extreme product life and Ultimate value to its customers.

Technology

We are all over it!

Exide has developed new and technologically advanced products, innovative services and systems that will provide superior performance and life to our customers and Australian & New Zealand motorists.

Our company engineers and research centre is at the forefront of new technology and they dynamically consider, test and verify the vast range of opportunities in new product design. The traditional lead acid battery technology remains the foundation of most batteries, and "pound for pound" is the most proven reliable and cost effective power source. Battery innovation is fundamentally based on enhancements which are the main focus of our R&D departments around the world. Additives such as Tin, Silver,

carbon, Lithion-ion, Absorbed Glass Matt (AGM) separators and other paste additives are all advancements that Exide have considered and incorporated where there are proven benefits.

Exide have recently introduced two of these latest technologies into its range. Ap9 is a Tin alloy additive to the battery grids which delivers improved mechanical properties, lowers resistance to charge acceptance and reduces grid corrosion rates. Additionally, we have enhanced our plate active material formulation, by including seed crystals to dramatically improve plate adhesion & corrosion resistance – we call this 2xT and use it in our Extreme range of products. Both of these powerful innovations deliver greater performance and longer application life.

New and technologically advanced products, innovative services and systems that will provide superior performance and life.

Ap9 alloy improving corrosion resistance

2XT paste additive for longer life

Recycling

Did you know that old batteries could make you money?

Through our TOTAL BATTERY MANAGEMENT program Exide will supply your new batteries and collect the old ones for recycling and pay you for it!* (*Conditions apply and dependent on quantities).

Recycling lead acid batteries has been an important factor in Exide's business model for many years. Each year, our Recycling Plant known as "Evergreen" produces approximately 96,000 metric tons of refined lead and lead alloys per annum. Exide also

is a significant recycler of plastic, capturing plastic from spent batteries and using it in the production of cases and covers for new batteries. Environmental stewardship and recycling is a major focus in all Exide operations. The recycling of lead acid batteries is one of the most significant and enduring environmental success stories of our time with over 98% of lead acid batteries being able to be recycled.

Recycling for a Better Environment

Product Range

Complete Range, Technology

Exide offers a comprehensive range of starting, dual purpose and cycling products for the following applications:

- » Passenger vehicles
- » Stop/Start
- » SUV/4WD and Light Commercial vehicles
- » Heavy Commercial vehicles and Plant Equipment
- » Leisure (Caravanning & Camping)
- » Marine & Watercraft
- » Mobility Scooters, Golf Carts & Ride on lawn mowers
- » Industrial applications (Sweepers, Scissor lifts, Fork lifts)
- » UPS, Solar & Communications

Each application deserves the correct technology, and Exide have designed its range to provide flexibility in choice and correct specification.

Our range includes:

- » Hybrid (Antimony/Calcium) Maintainable
- » Calcium/Ag9 Maintainable
- » Absorbed Glass Matt (AGM) starting & cycling
- » Enhanced Flooded
- » Sealed Maintenance Free with Ag9 & 2xT
- » Gel Cycling
- » Valve Regulated Lead Acid (VRLA)
- » Cylindrical Cell AGM

*Whatever your need,
whatever your technology,
Exide has the battery to suit.*

Product Positioning

Leading the battery industry

All modern applications place heavier demand on the battery's performance than ever before. Exide understands these changes and have recently commissioned comprehensive car-parc research into genuine OEM specification requirements which has resulted in the design of Exide's leading range, designed specifically for the Australian & New Zealand market.

For years now, the battery market has pointed to Cold Cranking Amps (CCA) as the determinant for assessing the quality of the battery. Whilst CCA is important, all key product specifications pertaining to battery performance are equally important. That is, Cold Cranking Amps (CCA), Reserve Capacity (RCm) and Amp Hours (AH). Exide has recently designed its specifications on a balanced approach respecting all of these battery characteristics.

Our Balanced Power approach is to achieve "Longer Life" which is the number one requirement of the purchaser. This has been backed by Exide's innovative "Extended Warranty system".

Passenger Vehicle

Budget Range	Genuine OEM Spec	Best Performance & Value
		
18 month warranty	30 month warranty	42 month warranty

Exide's passenger range is designed to suit every vehicle application for any budget. Exide's product has been developed with different vehicle and consumer needs in mind including electrical load complexity of demand, warranty requirements and maintenance preferences.

SUV / 4WD / Light Commercial

		
18 month warranty	24 month warranty	30 month warranty

Exide's SUV / 4WD / Light Commercial range is designed to suit the specific and additional demands of this category. Whether you require a basic starting battery for your everyday vehicle or a specialist application battery for your light truck, 4x4 or SUV, we have the technology to suit including Calcium/Calcium, Hybrid and AGM to meet these demands.

Heavy Commercial

		
12 month warranty	24 month warranty	24 month warranty

Exide's Heavy Commercial range has been developed to provide a suitable solution for this categories heavy demands. Whether you require one or multiple batteries for your truck, agricultural, heavy industrial and earth moving equipment, we have the battery to suit. The heavy commercial range comes in multiple technologies including Calcium/Calcium, Hybrid and AGM to meet these demands.

All warranty periods are stated with the maximum warranty offer.

Purpose Built Specialty Products

Marine Starting

- » To suit basic marine watercrafts
- » Sealed maintenance free with glass mat
- » 18 month Warranty*

Marine Dual Purpose

- » To suit mainstream boats with standard equipment
- » Sealed maintenance free with glass mat
- » 24 month Warranty*

Marine Cycling

- » To suit Marine specialist applications
- » AGM sealed maintenance free
- » 24 month Warranty*

Lawn & Garden

- » Suitable for ride-on mowers and small landscaping vehicles
- » Two technologies - Maintainable and sealed maintenance free
- » 12 month Warranty

Caravan & Camping

- » House battery supply for outdoor applications
- » Two Technologies - Sealed Maintenance free and AGM
- » 18 - 24 month Warranty*

Stop / Start

- » Suited for Asian & Euro stop/start vehicles
- » Two Technologies - Enhance flooded for Asian design and AGM SMF for Euro design
- » 18 month Warranty*

Deep Cycle

- » For mobility, golf, small industrial equipment applications
- » Two ranges - Maintainable flooded lead acid for light and heavy industrial cycling
- » 6 - 12 month Warranty

Specialist Cycling

- » High end solar, UPS, large mobility & industrial equipment
- » Two technologies - Gel and AGM for specialist cycling applications
- » 12 month Warranty

VRLA Small Sealed

- » For alarms, mobility, toys, lighting, small fit
- » Valve regulated AGM technology
- » 12 month Warranty

Motorcycle/ Jet Ski

- » Suits motorsport applications
- » AGM starting
- » 12 month Warranty

Orbital

- » Specialist applications 4WD, hi-performance cars, emergency vehicles, heavy accessorised PMV's
- » Spiral wound AGM sealed maintenance free
- » 24 month Warranty

Extreme Performance, Extreme Reliability & Extended Warranty options.

CUSTOMER FOR LIFE PROGRAM DRIVING SALES & LOYALTY

WHAT CAN YOUR BATTERY SUPPLIER DO FOR YOU?

CAN THEY MAXIMISE EVERY CONSUMER TRANSACTION?

CAN THEY GUARANTEE YOU REPEAT BUSINESS?

CAN YOU DRIVE YOUR CUSTOMER BACK TO YOU?

At Exide we understand that consumers have a choice when it comes to who they purchase from. We also understand that in today's competitive battery market extending the life-cycle of every hard earned customer is a key ingredient for every successful business

That's why our products now come with a **Free Extended Warranty Offer** which not only rewards your customers with unprecedented peace of mind but most importantly to you, captures information of your customer purchase so that you can continue to interact with your customer

long after they have left your store. We call this our "Customer for life" partnership program.

There are two ways you can register your FREE EXTENDED WARRANTY

1. Look for our Quick Response Code (QR Code) on the top of the battery label. Scanning this QR Code via a compatible Smart Phone takes the Purchaser or Seller to the registration page.
2. If the consumer doesn't have a Smart Phone, they can simply remove the QR post flyer, record the critical details of the battery and their vehicle on the back section of the QR Post Flyer, then sit in front of a computer and register through the Internet. They can also call us on our freephone number and we will do it for them.

If you are a Reseller that provides a fitting service, Exide recommends that you add value to your Customer's experience by completing the registration process for them by entering their details at the point of sale; via our website.

The registration will only take a minute and once its done, your customer has the added benefit of free extended warranty of six (6) months without the hassle of registration, and you have your "Customer for life".

So How Does it work?

- 1 Your Customer purchases a quality Exide battery
- 2 You register the purchase details at the point of sale/or your Customer takes the product away and registers themselves

- 3 The information is stored on the Exide website (and can be accessed by you the Exide Dealer)
- 4 An automated alert will be posted to the consumer after a period of time based on the average life of the battery (via email or text). For instance if an Endurance battery is purchased, and the average life of that battery is 38 months, the alert will be sent prior to this, advising the customer that the battery is nearing the end of its life.
- 5 This will provide the customer with total peace of mind & avoid being stranded unnecessarily with a failed battery

BENEFITS TO OUR BATTERY STOCKISTS

Not only does your customer benefit from this great new initiative, so will you. So how?

1. The registration will log the Reseller name
2. You will be able to access all registered warranties through our Dealernet site for ease of tracking the warranty in the unlikely event of a warranty adjudication instance
3. When we send the alert to your customer, we will alert you as well so you can make contact as well
4. You will have the opportunity to offer your customer a repeat business incentive to entice them back to your store
5. We will be able to data bank your customer details for your use provided the customer allows it

Warranty Adjudication – accessing the consumers details:

Complete the normal warranty adjudication process detailed in Exide's Fitment Guide or via our online Dealernet. Request the consumer's warranty certificate and/or purchase receipt. Test the battery as per Exide's requirements.

Genuine manufacturing defects represent less than 1% of batteries sold and the majority of batteries presented as potential warranties are suffering in-application faults with faulty charging systems, battery abuse or they are being used in incorrect applications. Be mindful too, that the older the battery, the less chance it has of being a manufacturing fault.

You will only need to access your Customer details if:

1. The customer can't provide a receipt but the original purchase has been registered
2. The term of the warranty is in question (which is highly unlikely),
3. You wish to check the odometer (very useful in checking Taxi & Commercial Fleet claims)

To search for the registered warranty:

Log into DEALERNET and enter your User Name & Password.

4. Use the search field to enter Vehicle Registration, Customer Name & post code, phone number and/or email address.
5. Review Customer stated purchase date and vehicle odometer information to establish if details and warranty period are correct.

For further information on DEALERNET or Warranty Adjudication procedures, please contact your Exide Sales Representative

It really is that simple. So now when you purchase an Exide Battery you're not just buying a marketing leading product with the best all round specifications in today's market – you are purchasing a 'customer for life' with our unique Extended Warranty Offer and QR code registration software. Ultimate value!

Next time you're considering which brand of battery to recommend to your customers, recommend Exide to Power your World!

Register your customer purchases today at www.mplbatteries.com/xwarranty for Free Extended Warranty and a "Customer for Life".

Warranty

Nation-wide Warranty

At Exide Batteries we are committed to total customer satisfaction by providing quality products and quality service at all times.

All Exide Batteries are covered by a free of charge replacement warranty that is backed by Australasia's leading battery supplier.

Retain receipt for proof of purchase. Possible causes of battery failure that are not the result of faulty manufacture:

- Incorrect or under-specified battery type fitted to car
- Charge system problem (low or high voltage) creating an undercharge or overcharge situation. A low voltage will cause the battery to sulphate whilst a high voltage will literally cook the internal components of the battery.
- Repeated deep discharge (heavy accessory loads, car phones, lighting, boat accessories, etc)
- Prolonged storage of the car or very minimal use. A battery will generally sulphate and will never recover its full state of charge
- Electrical faults (short and excessive loads)
- Any battery modifications such as acid additives, lead terminal changes, or any other contaminates
- Damaged battery caused by consumer or other in-car fault.

Some guiding tips to help your new Exide battery last even longer

AVOID SULPHATION

Undercharging or leaving your vehicle in an unused state for any length of time, will harm your battery and void your warranty. A flat or sulphated battery is not considered to be a manufacturing fault.

REGULARLY CHECK ELECTROLYTE LEVELS (if applicable)

Remove vent caps and check electrolyte levels monthly. Fill with distilled water to just above the separators and plates. Mop up any spills.

BATTERY MAINTENANCE

As part of your normal program have your battery charged at every vehicle service. This will prevent the battery operating in an uncharged state due to parasitic loads and vehicle sitting unused for extended periods.

HAVE YOUR ENGINE SERVICED REGULARLY

Poor engine condition can overload the battery and reduce its life.

LOOK FOR FAILING BATTERY SIGNALS

Engine turning over slowly or lights dimming noticeably on starting means you should have your battery checked and recharged or replaced if necessary. Also check electrics and fan belt.

KEEP YOUR BATTERY CLEAN

Use warm soapy water and dry off well. Ensure battery terminals are cleaned at every vehicle service.

MINIMISE HEAVY DRAINING

When your battery is drained by leaving lights or accessories on, revive it with a slow recharge. Install a dual battery system if you frequently need to use accessories with high power demands.

CHECK YOUR VEHICLES CHARGE RATE

Under and over-charging will reduce battery life, so have the charge rate checked at every major service.

KEEP YOUR BATTERY SECURELY FASTENED

Vibration can damage battery plates, so make sure your battery is firmly held by a suitable hold down device. Inspect battery terminals regularly as loose terminals can cause breakdowns.

Battery Warranty Check

Step 1

Help your customer to a total solution

Check proof of purchase

- Date Code on battery corresponds
- Check physical condition
- Correct application of battery to vehicle

Step 2

Charge or replace?

- Remember flat batteries are NOT warranties
- Using a quality Exide Battery tester or similar check state of charge. If just flat RECHARGE!

Hydrometer

Check all cells ensure above 1.225 S.G.
Use high rate discharge tester

Voltmeter

Ensure open circuit voltage above 12.4V.
Use high rate discharge tester

Exide Digital Tester

Test according to instructions

Step 3

Replace

- If proven faulty retain battery for your Exide representative
- For further Information call Hotline on 1800 800 811 or check your Dealernet at www.exide.com.au or speak to your representative
- Exide can provide product training in a number of innovative ways

REMEMBER

Your Exide Warranty applies to the battery and the replacement battery - totally

Warranty Adjudication Guide

Time in service	Comments	Chances of being a genuine warranty (manufacturing fault)
4 Weeks or under	Chances are, the vehicle has a further problem other than the battery. An electrical systems check may not have occurred originally	5%
1 - 6 Months	See previous point - the majority of manufacturing faults will occur in this period	20%
6 - 12 Months	See previous points - the longer the battery is in service the less likely it's a manufacturing fault. Complete thorough check of battery & vehicle	10%
Over 12 months	Highly unlikely to be a manufacturing fault. Failure at this stage of the application is usually due to the vehicle/ driving characteristics. Very high or low kms, frequent start/stopping, unusual high demand applications etc.	5%
All Batteries	Total Number of actual manufacturing defects	under 1%

Based on Exide Batteries tear-down analysis

Battery Fault Finding

Open Circuit Voltage Check (OCV)

- » Use DC mode on multimeter 0.01 volt resolution.
- » Six cells are connected in series at 2.1Volts per cell giving combined OCV of 12.6.
- » Batteries cannot be checked accurately less than 12 hours after charge.
- » Charged batteries should be 12.60 to 12.90 OCV.
- » OCV of less than 12.20 indicates low state of charge < 50%.
- » OCV is linked to specific gravity e.g. 12.60 OCV = 1.260S.G.

Specific Gravity Check (S.G.)

- » S.G indicates individual cell state of charge.
- » Large variations in S.G can indicate faulty a cell.
- » S.G can be misleading when recharged at low voltage. Stratification can occur giving a lower S.G.
- » To overcome this charge at higher current (3 to 5 amps up to four hours)

Fault Examples

1. Unable to start vehicle

» OCV 10.51 » Checked S.G on all six cells » Cell #1 1.265 » Cell #2 1.260 » Cell #3 1.105 » Cell #4 1.265 » Cell #5 1.265 » Cell #6 1.260	Observation Low OCV & Low S.G on Cell #4 Explanation → Intern This battery has a dead cell #3 → Likely cause would be a manufacture fault, short between positive & negative plates al break resulting in open circuit under load
--	---

2. Unable to start vehicle

» OCV 12.15 » Checked S.G on all six cells » Cell #1 1.120 » Cell #2 1.120 » Cell #3 1.125 » Cell #4 1.120 » Cell #5 1.120 » Cell #6 1.125	Observation Low S.G & Low OCV is a good indication of low state of charge. The battery should recover with a full recharge. Explanation → Sulphated batteries give similar readings to example #2 but have heavy sulphation. → This is due to dense lead sulphate which may not be reversible with recharge. → Batteries which have stood discharged for a few days will start to suffer from sulphation.	Observation Low S.G & Low OCV is a good indication of low state of charge. The battery should recover with a full recharge. Explanation → After weeks of being discharged they may not recover to serviceable condition. → Bulging end walls are an indication of severe sulphation developed over months causing irreversible plate damage.
---	--	--

3. Poor cranking performance

» OCV 12.65 » Checked S.G on all six cells » Cell #1 1.250 » Cell #2 1.270 » Cell #3 1.240 » Cell #4 1.275 » Cell #5 1.265 » Cell #6 1.265	Observation A good OCV & and reasonable S.G but with larger variations & brown sediment visible in the hydrometer is an indication of active material loss. Explanation → An indication the battery has been over worked or is worn out. A high rate discharge test will confirm. → Check if it is from a high mileage application or heavy cycle use. (taxi or heavy commercial use)
---	---

4. No cranking performance low OCV

» OCV 10.65 » Checked S.G on all six cells » Cell #1 1.270 » Cell #2 1.270 » Cell #3 1.270 » Cell #4 1.270 » Cell #5 1.270 » Cell #6 1.270	Observation Very low OCV but S.G good but unable to hold current load Explanation → Internal break resulting in open circuit under load
---	--

General Q&A

How long will my battery last?

This will depend on usage and climate. On average it will generally last approximately three to four years or 100,000 km.

When should batteries be replaced?

As soon as it shows any signs of reduced cranking performance.

For reliable starting a guide is four years or 100,000 km.

What happens as batteries wear out?

Service wear causes mechanical breakdown of all internal components.

Positive grids corrode and active material sheds from grid reducing capacity.

Negative active material shrinks and sheds from grid reducing cranking performance.

Separators oxidise and develop cracks and holes which can result in plate shorts.

Can battery additives be used to extend battery life?

Additives cannot restore battery performance or extend service life.

Additives can actually introduce impurities which can cause damage.

Should extra acid be added to old batteries to improve performance?

No, there will only be a short term gain, the extra acid will actually shorten plate life.

How long should batteries be stored unused?

Batteries start service life when acid is added in manufacturing process even with regular boost charging batteries will age and internals will be effected by sulphuric acid and cell reactions, effectively reducing service life.

Batteries are best put into service before three months from the manufacture charge date.

Batteries can still remain serviceable if stored up to 12 months with boosting charging but service life will be impacted.

How long can dry charged batteries be stored before activating?

Ideally one year but they will last longer if stored in a cool dry environment and the temporary seal is not broken.

How long can I leave my battery discharged?

Best to recharge immediately after discharge use but within 24 hours is acceptable.

Deep cycle batteries should not be discharged more than 50% of the 20 hour capacity.

Installation & Charging

Installation

A replacement battery may vary from the original factory fitted battery. In most cases the replacement battery can be installed without any modification or adjustment. However, it is advisable to always check the replacement battery against the existing one to ensure that size, hold down, terminal configuration, cranking capacity and bonnet clearance are suitable for the application.

- Check bonnet clearance before installing battery.
- Locate positive terminal and mark plus (+) on the cable. Remove the negative cable first.
- Remove the positive terminal and battery hold down.
- Inspect the tray for corrosion. If necessary, clean using baking soda and water. Rinse with clean water.
- Place the new battery in the tray and ensure the battery is level and the terminal posts are in the same position as the old battery.
- Replace the hold down and ensure battery is secure.
- Replace the positive terminal and tighten.
- Replace the negative terminal and tighten. The negative terminal should always be replaced last.
- Never over tighten or hammer terminal onto the battery as this can damage the posts.

Safety

Always use care when transporting or installing batteries.

- Batteries are heavy. Lift carefully and do not place on unstable surface.

- Batteries contain acid. Lift carefully and do not tilt. Keep battery upright at all times. Keep acid away from clothing and skin. If contact occurs, flush with large amounts of water. If acid contacts eyes - seek medical attention immediately.
- Batteries generate explosive gases. Keep naked flames and cigarettes away and ensure adequate ventilation is available when charging a battery.
- Keep metal objects away from terminals.

Charging

Before charging begins, provide plenty of ventilation and ensure safety goggles and a face shield are worn. Sparks from loose connections or metal tools making contact between the terminals or the ungrounded terminal and nearby grounded metal parts can also be hazardous. Do not remove the vent caps and do not charge the battery unless you are thoroughly familiar with the step-by-step procedure of recharging a battery. Check the electrolyte levels, then place a wet cloth over the battery top and vent caps. Turn the charge rate switch and timer to the OFF position before connecting the leads to the battery.

Connect the charger leads to the battery terminals, red positive (+) lead to positive terminal and black negative (-) lead to the negative terminal. Rock the charger lead clamps to make certain a good connection has been made. Set the electric timer to the desired charging time.

Turn on the charger and slowly increase the charging rate until the desired ampere value is reached. Do not charge in the red zone. If the battery starts to emit smoke or dense vapour, shut off the charger and reject the battery. If violent gassing or spewing of electrolyte occurs, reduce or temporarily halt the charging.

Never touch the charger leads when the charger is ON. This could break a connection at the battery terminal and create a spark which could ignite the explosive gases in the battery. Never break a "live" circuit at the battery terminals for the same reason. Always turn the charger OFF before removing a charger lead from the battery.

Your guide to battery recharging

The following charging rates and times assume a fully discharged condition.

RESERVE CAPACITY (RC) Expressed in minutes and found on battery type label.	SLOW CHARGE
Up to 75 mins	15 hrs @ 3 amps
75 mins-130 mins	21 hrs @ 4 amps
130 mins-180 mins	22 hrs @ 5 amps
180 mins-250 mins	23 hrs @ 6 amps
Above 250 mins	24 hrs @ 10 amps

Many chargers available will automatically adjust to discharged condition and commence with a boost charge gradually changing to suit the battery condition and then switching off at the fully charged rate. If not an automatic switch mode charger use the above as a guide.

Support

We are a supplier who will support you

At Exide, we support our partners with market leading tools and training to equip all staff with the skills required to confidently grow your battery sales.

Exide will support your outlet through the following ways:

- Onsite personal and group training – covering product range, basic battery knowledge, warranty adjudication and consumer selling using the benefits our range has to offer
- Market leading on-line audio visual training resource – providing module based learning and certification
- Industry best fitment guide and product manuals in hard copy or electronic form
- Access to the tools to test and correctly fit our batteries
- Visually striking point of sale materials to show your market that you are a genuine destination for Exide batteries
- Battery Tear-down Analysis (as required)

Each participant of either onsite or e-learning training courses will be formally recognised with a certificate to recognise their completion of the course

As a reseller you will also have access to our dedicated customer support centre, which operates 8.00am to 6.00pm EST, 363 days per year to assist with all of your enquiries.

More importantly, when you join our team, you will be listed on our Dealer net website and experience the benefits from our numerous referral services subject to meeting certain criteria.

Please ask your representative for more information and a copy of our current support programs.

Exide online partner education with module based training and certification.

Instore POS and merchandising support

Branding

Support advertising

Exide's brand advertising is the foundation of reseller brand support. For major retailers consisting of national networks, we tailor our destination based advertising campaigns primarily to promote our branded products with specific "available at" tags. Recent programs have focused on exposure at major events, as well as specific product campaigns in targeted magazines and at 4WD, marine and caravan & camping shows.

The Exide brand and retail phone numbers 1800 and 0800 are promoted through various avenues and are designed to capture consumers interest. All enquiry contacts are passed directly onto you. (conditions apply)

For our Independent customers, our focus is to identify your outlet as a battery destination through external signage displays, testing programs and through our online store locator (subject to criteria compliance).

Did you know 65%* of consumers do not know where to buy a battery? (*Reference/Source: OminCom 2005).

Exide is one of the most recognised battery brands in Australasia. This is due to:

- » National Ad campaigns
- » Trade and Retail promotions,
- » DealerNet referral system,
- » Point of Sale and merchandise materials
- » Product Ambassadors program
- » Innovative techniques eg audio entry buzzers etc.

We also have channel specific branding programs such as:

- » Batterymart for auto electricians
- » Marine dealer programs
- » DIFM battery builder

Advise us about the channel you operate in, and we will identify the program best suited for you.

Market Research

We researched consumers to establish their purchasing behaviours with batteries and the product in general (source: MIG research 2014):

- » They will trust a credible expert in their advice if explained
- » They want value for money (life, Warranty & Price)
- » They want peace of mind, trusted brand, fit for purpose
- » They want simple, non-technical information to help them make their decision

This research has formed our "Next Generation Battery Program"

Promotions

Promotional support

Exide has typically coupled its brand advertising with specific seasonal promotional campaigns. Our objective with the Exide brand is to deliver an informative message regarding application, with a concise product credibility story and most importantly, the best destination to purchase it.

McGrath Foundation Initiative

Over the past 2 years Exide in conjunction with The McGrath Foundation launched a dedicated pink battery campaign. For every battery sold Exide donated a unit contribution to the Foundation in support of the breast care cancer network.

Our promotional support continues throughout the year

Examples:

Spring

Motorcycle & Leisure ranges

Summer

Marine

Winter

Workshop Man Cave promotion

Club Rewards

12 month ongoing

The ultimate battery power now comes with more heart.

Even more value for Exide stockists.
By choosing Exide's trusted Australian Made products, you will also be helping to support the amazing work of the McGrath Foundation.

The McGrath Foundation raises money to fund McGrath Breast Care Nurses in communities right across Australia and to increase breast awareness in younger women.

Club Rewards

Club Rewards Program

Want rewards?

As an Exclusive Exide member, you gain free membership to our exclusive Club rewards program (conditions apply). This means every time you buy our batteries or return scrap, you earn points that can be redeemed for some fantastic rewards – it's as good as cash.

Imagine what you could do with your rewards!

- Reward staff
- Provide loyal customers with gifts
- Treat yourself & your partner
- Xmas presents
- Customer/staff functions

We also run periodic promotional programs to keep you earning those rewards.

All this could be yours....

Exide Club Rewards
The program offers a diverse range of goods to suit all tastes.

Exide Club Rewards
Seasonal offers such as triple points.

Service & Distribution

Regular as clockwork!

With a distribution centre in every state, and a fleet of vans to service you, an Exide battery is never far away.

Every time one of our experienced team members visit you as part of our regular call cycle we will:

- Manage the replenishment of stock items that have been sold
- Conduct stock rotation of idle/discharged stock
- Test and adjudicate presented warranty claims
- Complete cleanse of battery stock and stand

- Merchandise point of sale area
- Communicate the latest product and promotional news
- Collect your spent batteries for safe and responsible disposal
- Monitor sales trends and stock mix

Exide understand how important the smooth running of your business is, and as your battery supplier, we aim to provide you with the service that you deserve to grow your battery sales and profit.

5 Top reasons...

Exide – a smart reason to change

1 Our Credentials

- Since 1935, we have led the battery industry with products, programs, knowledge & knowhow
- We are ISO9001 Quality & ISO14001 Environmental accredited > can your current supplier boast this?
- Essential foundation of OEM design, backed by R&D forming a formidable product format
- Overseas and local Research & Development facilities with Customer assist diagnostics available for use

2 Our Brand, Our Products

- A spine of genuine specification products to suit 80% of the market > Endurance brand
- A three tier product range that provides entry level selling or sell-up marketing
- Best in class specifications outperforming our competitors in most instances
- A comprehensive product port-folio that is designed & built for balanced performance & long life
- A brand that is rich in history and ranked in the top 3 battery brands in Australasia

3 Customer Assist Growth Program

- Striking merchandise to attract consumers to your door
- Multiple quality levels for ranging backed by our innovative warranty offer
- Free bonus warranty that alerts the customer for replacement and drives repeat business
- Retail brand promotions that deliver customers to your door
- Competitive pricing with ultimate value

Exide...your local people with the experience to deliver all your needs when you need them!

4 Support that surpasses

- Industry leading online training system for you and your staff with certification
- Industry best Fitment Guide online, hard copy or mobi-app
- Access to local laboratory, overseas manufacturing & recycling facilities
- Regular & comprehensive call cycle quality calls
- Specialist channel programs that customise battery programs explicitly for your world

5 Sales systems

- Sales growth system
- Dedicated trade retail promotions
- National brand advertising
- Club rewards program rewarding you and your staff
- DealerNet referral system
- Signage and merchandising packages
- Channel specific growth programs

Power Your Future

Battery Chart Explanations

CHART EXPLANATIONS

TECHNOLOGY	LEDGE
SMF Cal/Cal	Sealed Maintenance Free Calcium Positive and Calcium Negative expanded plates
Cal/Cal Maint	Calcium Positive with Calcium Negative expanded plates but maintainable for rehydration
Hybrid Maint	Calcium Positive expanded plate with Antimony Negative cast grid but maintainable for rehydration
AGM Starting	Absorbed Glass Matt starting battery
EFB SS Maint	Enhanced Flooded Battery built for Stop/Start vehicles maintainable for rehydration
AGM SS	Absorbed Glass Matt Stop/Start Sealed maintenance Free battery
AGM Spiral	Absorbed Glass Matt Stop/Start Sealed maintenance Free battery
AGM Cycling	Absorbed Glass Matt Cycling Battery with ultra thick plates
SMF GM	Sealed Maintenance Free lead acid battery with Glass Matt separators
Gel	Valve Regulated Gel Cycling battery with ultra thick cast grids
VRLA AGM	Valve Regulated Lead Acid Absorbed Glass Matt battery
VENT	
TS	Totally Sealed
CP	Coin Screw-in Plug
RP	Raised Screw-in plug
VRLA	Valve Regulated Sealed
Strip	Removable gang strip

LEDGE	Side & End
S&EL	No ledge
NL	Side ledge (long side)
SL	Bottom Spacer included
BS	End Ledge (short side)
EL	
POST	
SAE	Standard Terminal Post
DFF	Dual Fit Post
JIS	Pencil Terminal Post
LUG	Rectangle Bolt through Lug
Stud Thread	Steel thread stud
SAE/Steel Bolt-on	Lead SAE with steel bolt
Twin	Twin SAE post & lead Lug
5m Lug	5ml hole in lug post
6m Lug	6ml hole in lug post
Spade	Electrical male spade fitting
Bolt	Steel config with hole & bolts provided

BATTERY TERMINAL ASSEMBLY

DATE CODE INTERPRETATION

Step 1 - Locate the Date code stamp in the battery using the Location column below NB : some batteries may have more than one date code stamp.

Step 2 - Record the correct code using the Digits column from the Table below

Step 3 - Using the Range Table above, look up the "Product Code"

Step 4 - Interpret code using the below "Country of Origin"

COUNTRY	DIGITS	LOCATIONS	REGIME	EXPLANATION
Australia	9	Top	DDMMYYTTTT	D = Day of Month (02 = 2nd)
Philippines	7	Top	YMMDDPS	M = Month (A-L > E = May)
Korea	5	Top	FPYMD	MM = Month (07 = July)
USA	10	Back side	FPSMMDDYY	MMM = Month (Oct = October)
Portugal	7	Top	YMMDDPS	Y = Year (14 = 2014)
Germany		Top		P = Production Line
China	8	Top	YMMDD-FF	S = Shift
Indonesia	7	Back side	FYDDMPS	F = Factory
Poland		Top	YMMDDSP	
Spain	5	Back side	DDMMYS	

Battery Terminal Options

T1 Terminal

FASTON TYPE (Copper) quick disconnect tabs;
silver coating for better conductivity

T2 Terminal

FASTON TYPE (Copper) quick disconnect tabs;
silver coating for better conductivity

T3 Terminal

Brass Coated With Tin
Torque: 3.9 ~ 5.4 N*m(34.39 ~ 47.75 in*lbs)

T5 Terminal

Lead
Torque: 3.9 ~ 5.4 N*m(34.39 ~ 47.75 in*lbs)

T6 Terminal

Brass Coated With Tin; Threaded Insert 6mm STUD
Torque: 3.9 ~ 5.4 N*m(34.39 ~ 47.75 in*lbs)

T7 Terminal

Brass Coated With Tin; Threaded Insert 6mm STUD
Torque: 3.9 ~ 5.4 N*m(34.39 ~ 47.75 in*lbs)

T11 Terminal

Brass Coated With Tin; Threaded Insert 8mm STUD
Torque: 11~14.7 N*m(97.28 ~ 130.0 in*lbs)
