General Anesthesia

Sometimes, we recommend treating your child in the operating room under general anesthesia at Women and Children's Hospital.

Patients who are very young, those who have a lot of cavities, special needs or medically compromised children can be treated safely and comfortably while they are completely asleep. All treatment can be completed at one time in one visit. Your child goes to the hospital in the morning and is discharged a few hours later.

If you and Dr. Roseman discuss treatment in the hospital, instructions will be given to you as well as mailed to you prior to surgery.

Please discuss any questions you may have with Dr. Roseman.
