

# CASE STUDY

## LUXURY MANCHESTER APARTMENTS

### Summary

- \* Development of luxury apartments
- \* Briefed to supply and install a stainless steel and glass balustrade
- \* Employed a 3D design agency to produce all drawing based on our dimensions
- \* Procured all materials and installed within two week window

### Stainless Steel & Glass Balustrade

Whilst a balustrade is a compulsory structural and safety element of a building, they can also have a massive impact on the overall aesthetics of a space.

This was the case when working on a luxury apartment project in Manchester, where we were tasked to design, supply and install a stainless and glass balustrade to all floors.

We worked closely with a 3D design agency to model the staircase from the site dimensions and initial drawings , before submitting for approval.

We then procured all materials and manufactured to full building regulations, before installing within a tight two week final-fix window.

The result is not only functional, but modern, sleek and eye-catching - perfectly at home in the space.
