We specialise in the manufacture & installation of all types of roller shutter doors.

As you will see 24-7 Roller Shutters have an excellent knowledge and reputation for supplying quality goods and services in all aspects of the door industry.

We have one of the most comprehensive range of shutters on the market today and most of these products can be adapted to suit all different types of sites and uses.

The shutters can be manually operated, hand chain or the ever increasing popular electrical operation.

We offer a wide range of powder coated B.S. or R.A.L. standard colours. The basic finish being a 22 gauge galvanised steel. All guides, canopies, flags & bottom rails etc. are also galvanised steel.

Free surveys are provided for both new installations and repairs. Furthermore, 24-7 Roller Shutters will not only supply, install and repair this equipment, but we will also give you the same high standards in our Annual Maintenance Agreement. This will ensure that all your shutters, are kept in the best possible condition.

Nationwide call outs during normal working hours are usually dealt with on a same day basis, however a 24 hour service is available for use in an emergency.
24-7 Roller Shutters manufacturer and install a range of fire resistant tubular motor roller shutter doors.

Ideal for all kinds of kitchen server’s, offices, commercial use, schools and colleges, our fire resistant roller shutter doors have been tested to BS 476 part 22 1987 for up to 240 minutes fire resistance by the Loss Prevention Council Board (Tests carried out by Warrington Fire Research Centre). With your safety of prime importance, our fire shutters give you added peace of mind in case a fire breaks out.

Fire Interface Panels

This is linked to the fire alarm and the signal required from the fire alarm is 24 volt D.C. 0.5 amps. This is the most commonly used activation allowing for frequent testing and re-setting, when the door is returned to the open position (after removal of the fire signal), the solenoid can be automatically reset.

Battery Back-Up Unit

Principally the tube motor fire shutter requires a maintained supply. If this cannot be achieved then effectively the shutter will require a battery back-up unit. If under fire conditions there is a power failure, the shutter must have a means of ensuring closure, the unit provided will give the facility for at least one operation under fire conditions.

Visual Warning (FDI)

Principally, this unit is designed to delay the closing of the fire shutter. Generally the fire alarm is linked to the audio unit and from the audio unit into the solenoid. On activation from the fire alarm the unit starts to ‘Flash & Sound’, this unit contains a programmable timer which effectively delays the signal to the solenoid to close the door.
The flexible solution for a safe exit route.

Invisible when not in use our flame curtain is fully automatically activated in the event of a fire alarm or power failure. This ensures safety where it is needed without having to compromise on the aesthetics or design of a building.

The curtain when lowered or deployed divides up large open spaces to slow down the spread of fire, allowing a safe exit. The 24-7 curtain is strong enough to contain a fire for up to 2 hours whilst still allowing a route of escape should this be required. This is achieved by simply lifting the bottom rail to create a gap large enough to go under.

**OUR FIRE CURTAIN FEATURES:**

- Helps stop the spread of fire
- 2 hour rating
- Invisible when not in use
- Auto-operation
- Gravity fail safe
- Complies with regulations
- Easy to maintain
Strong, quiet, reliable, secure, space saving, low maintenance, easy to use.

Your garage door is one of the most important visual features of your home, often representing a third or more of the front - the right choice will enhance the appearance and add value to your home. In most homes the garage door is in constant use - you want a garage door that you don’t need to think about - one that will be reliable and durable. These superbly designed doors are individually tailored for your home, effortless operation, smooth and quiet. The remote control enables operation from within the vehicle or home.

24-7 garage doors combine contemporary design with classic aesthetics. You can choose from a wide variety of colours as well as a range of wood effects, all designed to complement your home beautifully.

SAFETY

An electric garage door is normally the largest moving part of your home; the risk of injury to family and pets or damage to vehicles can be high especially if your old door is in a state of disrepair. 24-7 automatic garage doors come with the latest in safety sensor systems that prevent the door closing if there is an obstruction within the opening.

HIGH SECURITY

Conventional garage doors are notoriously insecure. 24-7 automatic garage doors, offer the very latest in security and safety. Automatically locking on closure, there are no handles to be tampered with and no leverage points for would-be intruders. 24-7 has its origins in security shutter manufacture and we have adapted our roller technology from the commercial to domestic arena.

THE ADVANTAGES:

- Maximises interior garage space allowing increased length and height for taller and 4-WD vehicles
- No need to leave clearance gaps as with “Up & Over” type doors
- Liberates considerable extra storage room
PHOTOCELL SYSTEMS

Utilising the same technology as the photocell, the light grid, made up of 34 infra-red beams projected across the door opening, offers increased detection of physical obstructions.

If any one beam is interrupted whilst the door is in motion, the light grid will stop and reverse the door automatically.

SAFETY BRAKE

The fully CE compliant anti-fallback device prevents the door from free falling when in the open position in the unlikely event of a motor failure.

ELECTRICALLY OPERATED

Powered by a fully CE compliant, single phase 240 volt tubular motor with a built-in manual override facility allowing the door to be operated manually in the event of mains failure.

AUTO-LOCKS

These heavy duty, anti-lift devices offer security against would-be intruders by preventing the door from being opened when in the fully closed position.
Door and window shutters for complete home security.

The increasing need for security in the home has led to an expansion in the market and the development of shutters that are both secure and attractive on a residential property. The shutters or grilles can be coloured to match the decor of your property, or if you wish contrast with it.

Changing times have lead to a demand for increased security and energy efficiency in the home. Roller Shutters are an ideal solution to this demand, and do so effectively and attractively. Domestic roller shutters have a much lower profile than commercial roller shutters, and are available in many different styles and colours. In addition special models are available such as extruded aluminium roller shutters for extra security, and foam filled models for greater heat and noise insulation characteristics.
SECURITY GRILLES

Expanding security grilles for doors and windows

THE ULTIMATE PROTECTION AGAINST CRIME

• Ease of Operation
• Peace of Mind
• Security with style

24-7 security grilles are an excellent security solution for your home or business, alone or in addition to our security shutters. Made from powder-coated and rust-resistant steel, they provide an effective visible deterrent and a strong barrier against unwelcome visitors. Yet, once installed, the window and door security grills are also designed to be unobtrusive and compact when retracted.

In fact, these window and patio door security systems won’t spoil your room décor at all because they fit neatly behind your curtains to go virtually unseen.

Another great advantage of 24-7 window security grilles is that you still have a clear view through the grilles even when locked and your room remains light and airy. Because they can be fitted to any size door or window opening, 24-7 security grilles can give you protection throughout your entire home - securing burglars’ favourite entry points.
ELECTRIC SUN AWNINGS

24-7 is a market leader in the supply and installation of luxury awning products, offering an unparalleled level of design and engineering excellence. Drawing on manufacturing expertise from continental partners, each individual awning model will have unique features, but an overview of the component make-up can be viewed in the technical specification folder.

ELECTRONIC CONTROLS WITH SUN AND WIND SENSORS

Extending arms with light action gearboxes and universal joints allow smooth operation either manually or electronically. Remote control operation is standard. Automatic sun and wind sensors can be fitted so that the awning retracts during wind and extends when the sun shines. Every awning is custom-made from accurate measurements taken by our surveyors, to be installed by 24-7 engineers.

KEY BENEFITS:

Protects your property & furnishings

24-7 awnings not only protect your family from the sun’s harsh rays, they also help to prevent your valuable furnishings from fading and reduce the internal temperature of your home. Ultimately a 24-7 awning will expand your home into your garden and integral lighting ensures ample opportunity for evening use.
We can now offer you an excellent solution to help create additional outside space, completely protected from the weather and secured by lockable roller shutters.

With our new secure outdoor area you can protect sandpits, outside play equipment, keep windows and doors out of sight and create additional storage which can be used all year round.

**Benefits Include:**

- The secure roller shutters can be fitted to a wide range of wall mounted and free standing canopies, giving you additional secure space which can be used all year round
- High security against vandalism and burglary so you can keep your valuable equipment out of sight
- An aesthetically pleasing cost effective solution which creates secure additional outside storage space
- Heavy duty construction using corrosion-resistant steel, aluminium and uPVC for ultimate strength and longevity
School Security Specialists

24-7 shutters are the largest provider of comprehensive safety and security solutions for the educational community in the UK. We help head teachers & buildings managers to define what assets are most at risk, identify security concerns and provide solution on how to secure each educational facility.

24-7 Roller Shutters offer a wide range of physical security products that can improve the safety of your school substantially. These include roller shutter doors, IT Strong rooms, steel doors, security fencing /gates and anti climb products. We deliver custom solutions for complex school security needs that can be modified and expanded as your needs change and grow.

School Safe

We specialise in schools & colleges in the North West and North Wales. can provide you with a one stop security solution with fully inclusive maintenance agreements providing you with a range of payment options to cover most of your security costs, helping schools to manage their budget.

Our School Services Include:

- Roller Shutter Doors
- Awnings / Shaded Areas
- IT Strong Rooms
- Expanding Grilles
- Steel Doors
- Security Fencing /Gates
- Anti-Climb Products
- Viper Spike & Razor Wire
- Fencing
- Outside Secure Areas
- Service & Maintenance
The original insulated roller shutter door.

Manufactured from tough twin-walled aluminium slats with an insulating core, the curtain is held in place with high performance webbing that is unaffected by extremes of temperature. A strong extruded top slat and our patented comb locking mechanism effectively resist attack by would be intruders.

Our insulated roller shutters are available in a choice of colours, allowing you to match your door to existing paintwork or double-glazing for a coordinated look to your premises.

Insulation

Insulated foam-filled slats, combined with superior guide rail inserts, bottom slat rubber seals and a curtain that finishes higher than competitor designs help increase energy efficiency and reduce heating costs, with a typical U value of 5.2 W/m² K.

Insulated steel roller shutters has been independently tested and certified to withstand a Class 5 wind loading at 7000mm wide.

The roll-formed insulated steel profile sections have been thermally assessed to a “U” value of 1.37 W/M.K
STEEL DOORS AND STRONG ROOMS

We manufacture & install custom-made steel door sets with surrounding frames. Steel door sets usually replace wooden doors, as they provide a much sterner obstacle. The steel door sets supplied by 24-7 can be fitted internally or externally, with a variety of hardware options to suit your particular environment.

STEEL DOORS PROVIDE:

• Protection
• Access control
• Peace of mind
• Strength, security and style

If you have a particular situation that requires a specialist or unique design solution we are happy to provide a bespoke door design service. Our experienced personnel would be pleased to offer advice on any size of project from a single door set to major developments.

ANTI RAM BARRIERS

Ram Barriers & Posts

Ram barriers and posts from 24-7 offer a highly visual and successful ultimate deterrent against ram raiders, usually to protect rollershutters and industrial doors, saving expensive repairs and damages.

At 24-7 we offer all the advice you need in applying ram barriers and posts to increase your security.
ANTI-CLIMB PRODUCTS

24-7 Viper Spike Anti-climb Security Range

Extremely versatile, the viper spike can be fitted at almost any angle to fences, walls, gates, pylons, stadium lighting, roof elevations, telegraph poles, highway lighting, CCTV masts, drainpipes and numerous other applications. The Viper Spike is a robust device, both powerful and impressive in appearance and tenacious in its capabilities when challenged. It’s attractive, friendly appearance is deceiving. Unlike conventional alternatives, the Viper Spike does not contain rusting, entangling or impaling features, yet delivers a sharp and painful ‘bite’ to potential intruders.

ADVANTAGES:

Made from Nylon 6, self coloured with UV stabilisers and fire retardant properties. Available in cherry red, military blue, forest green, ink black, oak brown and ash grey - other RAL colours available upon request.

• Maintenance free, reducing your maintenance costs
• Cannot be twisted or bent, does not rust
• Withstands shock, vibration and attacks
• Withstands exposure to extreme temperatures
• Life expectancy is anticipated to be in excess of 10 years

ANTI-CLIMB RAZOR WIRE

Razor Wire: provides the maximum secure appearance and can be fitted to the top of existing fencing, on walls or buildings. Available as single strand or in various diameters in concertina form. Warning signs can be provided on request.
Vinyl Concertina Doors to partition off larger rooms

Applications include - hotels, offices, conference centres, churches, colleges...

• High acoustic performance
• Vast selection of finishes (inc veneer, laminate etc)
• Flexible division with stacking options
• Top hung with no floor tracks
• Fire rated systems available
