

**Commercial - Fuel Stations
Solar Rental**

ZEROTH |
ENERGY

In simple terms it's a rental agreement where you get the option to own the solar system after the rental contract expires.

What is our Solar Rental Solution?

You pay a fixed monthly "rental". In return, you use the energy the system produces. Immediate SAVINGS!

This option of financing has become popular. Instead of you buying and paying for the solar system upfront, you now only pay a low and fixed monthly amount. The system is installed at no upfront cost and you get to have all the energy produced. After the rental period, you own the system and receive free electricity for the remaining life-cycle of the system.

Installation Cost: You pay Zero installation cost; we will procure, purchase and install the equipment.

Contract Terms: Solar PV Panels have a life span of 25 to 30 years. Our rental period is from 7 to 10 years. You have full ownership after contract expiry.

Insurance and Maintenance: During the rental period, all maintenance, warranties and insurance will be covered by BlueShift Energy Solutions.

Savings: No upfront payments The monthly rental amount will be lower than what you are currently paying the utility. You pay us out of your monthly savings from your current electricity bill.

How Solar Rental Works

Site Audit & Financial Analysis

ZerOTH Energy provides you with a FREE solar consultation that includes a site audit and financial solution analysis.

Solar Rental Agreement

You sign a Solar Rental Agreement with BlueShift (this includes insurance and maintenance). We buy and install through our internal financing. No upfront payments.

Energy Use

You ONLY pay for the rental of the Solar Equipment. The rental fee, divided by the total power the panels produce, will give you a rate (KWh) typically less than that charged by the utility company.

Solar System Installation

BlueShift designs, procures, installs, licenses and connects the solar system to your premises.

Maintenance & Monitoring

BlueShift continues to monitor and maintain the system while you save on your energy bill.

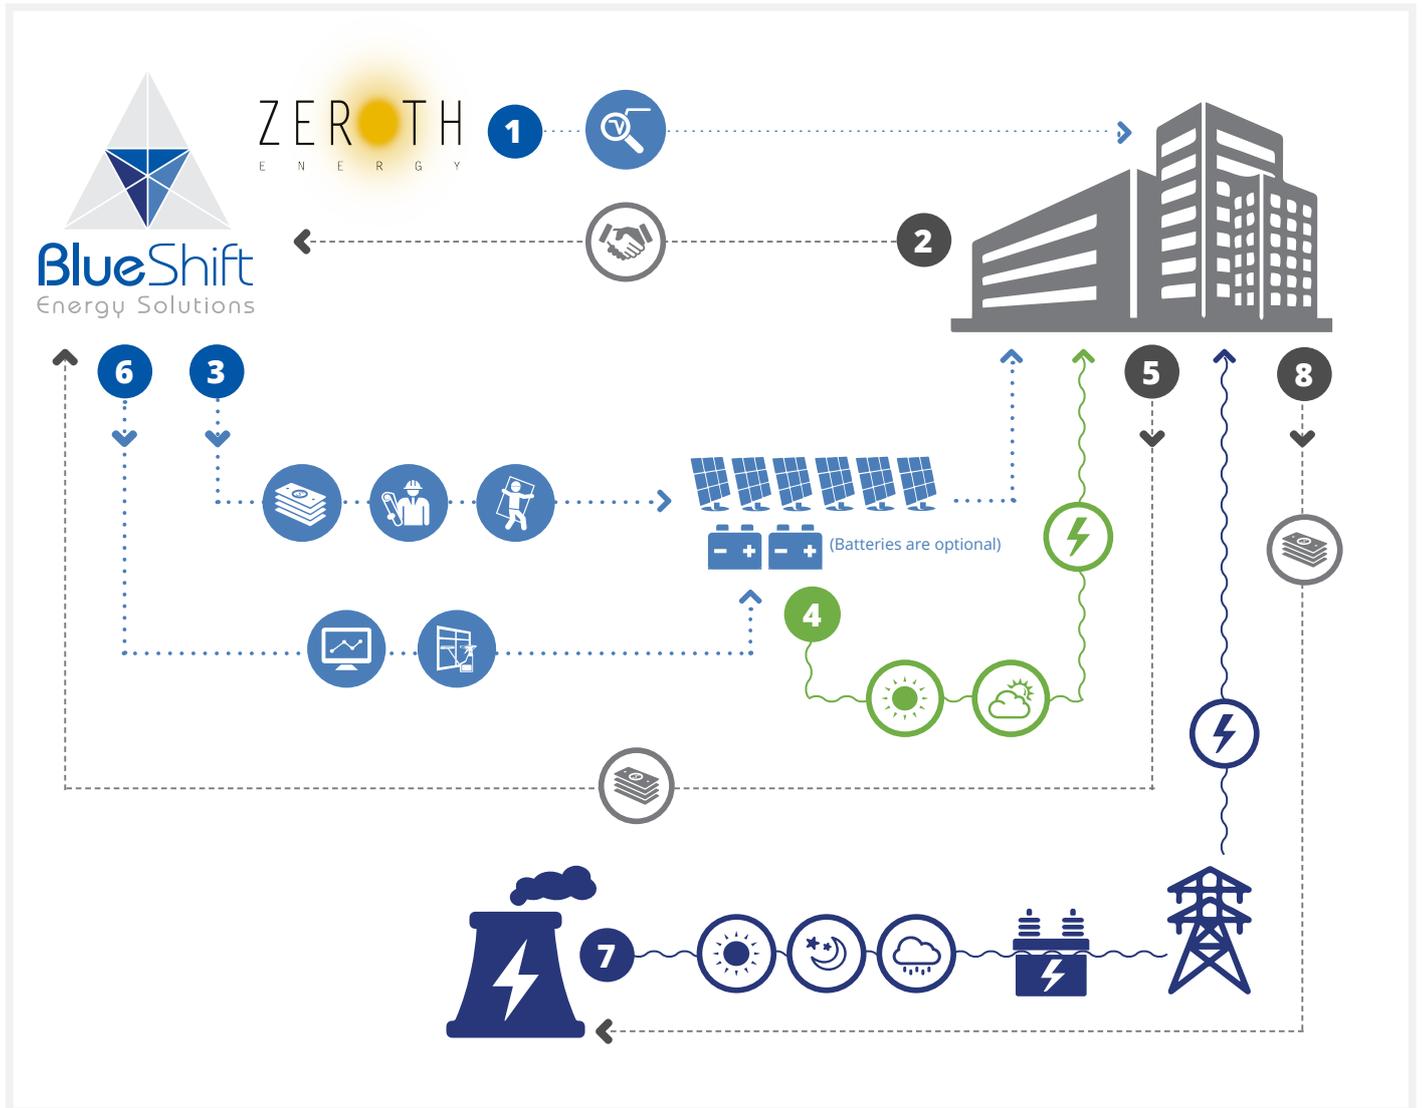

Contract Review

After contract expiry (10 years), you can sign a new agreement or own the system.

How the Zeroth Energy/BlueShift Solar Rental works

- 1** Zeroth Energy conducts a site audit & financial analysis.

- 2** You sign a rental agreement with BlueShift.

- 3** BlueShift installs the solar system on your premises.

- 4** BlueShift solar system provides your building with electricity during daytime.
- 5** You pay a fixed system rental fee and in return you use all the energy produced.

- 6** BlueShift maintains and monitors the solar system for the rental duration.

- 7** Eskom continues to provide electricity partly during daytime and at night.

- 8** We assist you with other energy efficiency initiatives and you pay a reduced Eskom electricity bill.

FAQ's

Can I afford solar?

If you can pay your current utility bill, then you can afford solar. You pay no upfront capital for the solar system on the solar rental option. You pay a fixed system rental fee for the duration of the rental agreement.

Financing options?

We offer three solar financing solutions: you can either buy your system **CASH**, get it **FINANCED** through a bank (we will assist you with the whole process), or sign our **Rental** to get access to our ZERO down payment option. All solutions will save you money.

Will I still get an electricity bill from my utility company if I have solar panels?

Yes. Unless your solar energy system includes battery storage and you are fully off the grid, you will still receive a bill from your utility. However, it will be a dramatically reduced bill, depending on the size of the solar energy system versus your demand for energy.

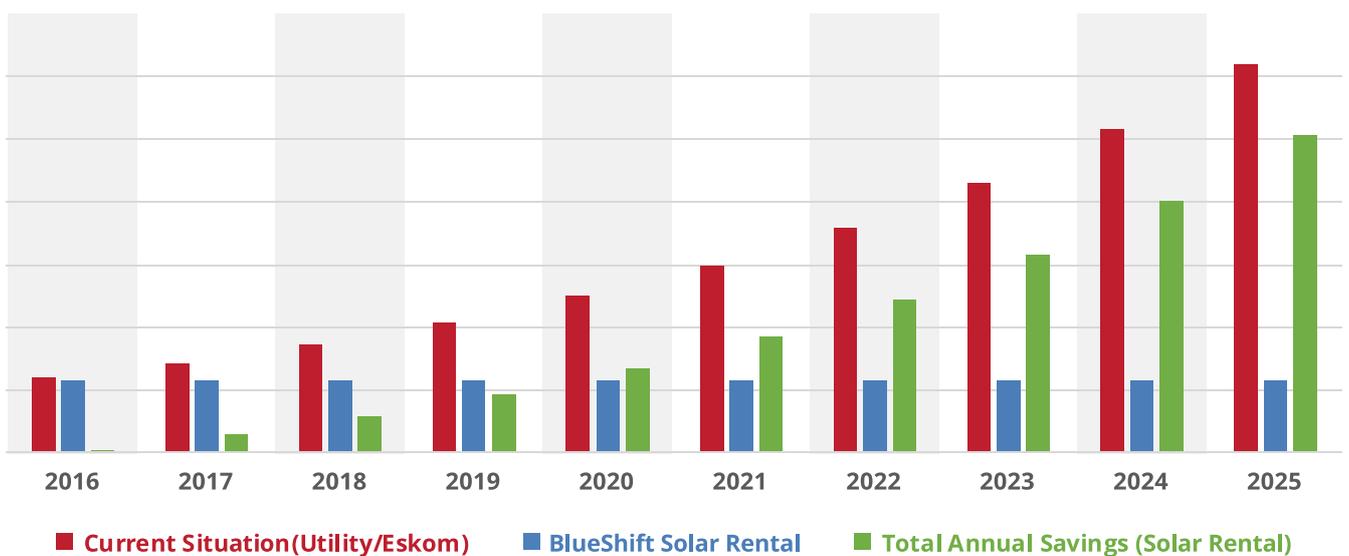

What are the financial benefits of solar energy?

When you install a solar energy system on your property, you save money on your electricity bills. You also protect yourself against rising electricity rates in the future. How much you save depends on the utility rates, solar incentives and your choice of finance option, but going solar is always a smart investment for your property.

Zeroth Energy offers a reliable and simple solution that solves your electricity problems and allows you to concentrate on your core business functions.

Example of savings on a BlueShift Rental Solution over 10 years.
