

## Road Map

When you're viewing the map of your cemetery, you can view a road map to any selected grave. This gives you directions and can even be printed for visitors. This is how to set up your road map.

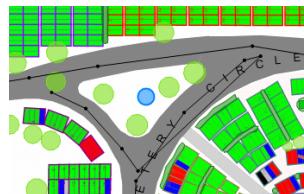

First, click on the Mapping icon. On the layout tab, click Set Navigation Start Point.

Here, you'll want to select your Office. That way, the map will always begin at your office and lead to the grave. A green dot will appear when the office is selected. Click Save.

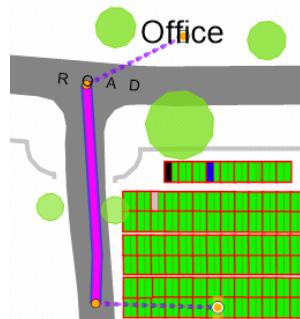

Next, you'll need to "teach" your program the roads in your cemetery. By doing this, any selected grave can be mapped. Click Add Roads. Click around on the roads of your map. These can be spread apart a bit, so it isn't too time consuming.

Once all roads are mapped, click Save Roads.

Now that the roads are calibrated, you can map any space. Find the grave that you want, and head to the Navigation tab, and check the box labeled Map Selected Grave.

The purple line will appear giving directions. A solid line indicated walking on the road, and a dotted line indicates walking through the grass. You can zoom in or out for easy viewing, then click the printer icon.
