Instead of general dentists providing specialized services, we have dental specialists – in endodontics, periodontics, prosthodontics and restorative dentistry. Together we deliver all the specialized services and complete modern dentistry you would typically have to visit four or five different dental practices for. We've got you and your family covered.

QUALITY DENTAL CARE IN AND BREWSTER

TRUE MULTISPECIALTY SMILE CARE

ARE FOR THE HAPPIEST RESULTS

We've helped thousands of patients from all over Putnam County achieve the smiles of their dreams. So whether you need straighter teeth, expert gum care, a complete dental implant, a veneer, a crown or a root canal, we can give you the truly specialized care you deserve. We work together to give you the best possible smile results.

This is where most smile problems can be corrected, restored or cosmetically enhanced:

- » Orthodontics & Invisalign – Premier Provider of Invisalign teeth-straightening.
- » Endodontics & root canals – It is best to have an experienced endodontist on your side.
- » Periodontics & prosthodontics – Complete gum care and placement of dental implants.

OR THE BIGGEST PROBLEMS

Most smile problems can be corrected, restored or cosmetically enhanced by our restorative and cosmetic dentist. Discover all the smile-restoring and enhancing possibilities at Sparkle Dental and Putnam Bright Smile Dentistry:

- » Crown
- » Bridge
- » Veneers
- » Whitening

If you are missing some of your teeth, we present you the marvel of modern implant dentistry technology. Dental implants are like your own teeth – they're the closest thing to the real thing. So why not give it a thought and consider having dental implants to improve the health and beauty of your smile and enhance its function.

Gum disease will lead to tooth loss if it's not treated, and millions of people lose teeth every day. If you have already lost teeth to gum disease, our periodontist will work closely with our prosthodontist to educate you about the benefits of dental implants. We will work together to ensure the correct placement of your dental implants, too.

We use root canal therapy to repair and save a tooth that has been infected due to a deep cavity or crack. Root canal therapy has a high rate of success. Many teeth can be saved to last a lifetime with proper care and maintenance. These can be pretty complex procedures, so it is best to get your treatment from an experienced endodontist.

ROOT CANAL THERAPY

We can now straighten adult and teen teeth without braces, and we have exciting new styles for traditional metal braces for children and people of all ages. Invisalign uses clear aligners instead of metal braces to straighten teeth. There are also clear or translucent braces, ceramic braces, lingual braces and self-ligating braces that move teeth faster.

We provide a completely stress-free, painless and comfortable experience. With our sedation dentistry techniques, you will never feel afraid to visit a dentist again. It is our mission to make you feel calm and at ease during your dentistry treatment. We will not let your fear of the dentist's chair stop you from getting the smile care that you deserve.
