

Fluorescent Tube Recycling

Most fluorescent tubes contain mercury, a toxic material which is environmentally hazardous if disposed of incorrectly. Disposing of large amounts of mercury containing lamps in landfill is forbidden in most states. The mercury, as well as the glass, phosphor and aluminum contained in the lamps can be safely recovered and reused.

Need a box or a bin?

Call the Doc Shop to order a pre-paid recycling box or 660l bin delivered to your business for you to place all your used fluorescent tubes into.

What can be recycled?

- ✓ High intensity discharge (HID) lamps used for street lighting
- ✓ Compact fluorescent lamps (CFLs) used in homes
- ✓ Fluorescent tubes used in commercial and public buildings
- ✓ Neon tubes used in signs

It's easy, find out how.
