(1) 18 oz. Heavy Duty Industrial custom fit vinyl cover (in separate bag).

(4) ratchets

(8) nuts and bolts & 1 drill bit

(4) clamps

Pictured L to R:

2 “base” pieces pictured above - which clamp on to the aluminum rails;

4 arches/“legs” – pictured above which attach to the 2 base pieces standing upward;

3 “cross” pieces – pictured above - which attach to the truss;

2 pieces of 1” square aluminum – pictured above - (these attach to the front and back heat pump stand. The cover frame then attaches and stands on this (using pre drilled holes).

2 arches:

continued
INSTALLATION INSTRUCTIONS

1. steel FRAME assembly:
   a) Place cross braces in pockets on arches
   b) Place 2 up rights in arches
   c) Place 2 up rights in pockets on base piece
   d) Repeat on other side

2. COVER
   a) Now lay your cover over the frame

3. Place the 2 pcs. of 1” steel pipe through each sewn pocket on the bottom of the cover (1 per side)

4. Feed the RATCHET STRAP through the cut out of the pocket; then around the pipe in the pocket; then around the base of the frame; and back through the ratchet. (When you are done you will have made a circle with the strap.)

5. Tighten the ratchets. It will tension the cover to the base pipe of the frame. Your cover is now secured to the frame.

continued
**IMPORTANT:**

*There are 2 aluminum square rails included - these rails are what the frame and cover will mount to.*

**Important:** Depending on how your heat pump was installed, you may mount the rails to: the top, bottom or side of your stand or wall brackets.

Not all installation brackets or stands are consistent.

As long as one rail is secured to the front and one is secured to the back, the cover will fit.

We supply clamps that will slide and the base frame will lie on the rails.

6. To connect the 2 aluminum rails to your stand or wall bracket, you must drill a hole and use the supplied bolts to connect.

7. Now place your frame onto the 1” aluminum rails which you just mounted to the heat pump stand or wall bracket.

8. There are 4 clamps supplied. Fit 2 clamps over the base pipe per side so they rest on the 1” aluminum rails.

9. Using the pre drilled holes, use a nut and bolt to go through the clamp and through the aluminum tube and tighten. Repeat this step for the other 3 clamps.

The side/width is 28” on both large and small heat pump cover.
