

“11 REASONS YOU MUST GET COMPLIANT, NOW”

Fellow business owner,

Above all, thank you for taking the time to read this report. In today's world more than ever, true knowledge still grants us extreme power when we choose to use it. This is why we've created this report.

With nearly 20 years vested in the direct-response, results-guaranteed marketing industry, I've pretty much seen it all when it comes to websites and marketing.

In case you don't know, 'results-guaranteed' means only getting paid AFTER results are obtained.

This means with all of the companies we've helped to transform over the years, I have never received one dime before we produced the profits that generated our %.

Having the mindset and abilities to produce real profitable results for businesses, it really gets sickening when I see so many great businesses being taken advantage of by sales people, smoke, and mirrors.

The small to mid-sized business has been sold a real bad bill of goods when it comes to the website/marketing part of business, and this is why silent competitors are literally SLAUGHTERING them at record pace.

Are you aware that 8 out of 10 businesses fail? Do you realize American retail stores are closing at the fastest rate ever, and do you know some industries have a casualty rate nearing 62%?

Analysts warned just a few months ago that “nearly 72% of businesses who fail to get compliant now will be OUT OF BUSINESS within 18-24 months”... that is serious.

Your website has been double verified “NON-compliant”... we checked it for you... That is EXTREMELY serious!

You may not understand why now, but it is my goal that you have a real good understanding by the time you're finished reading this report.

We no longer live in a world where business can survive and THRIVE without having a healthy, and Google favored online reputation. This is the real 'secret'.

This report is directed to the business who has a NON-compliant website, but everything you're about to read holds just as true for you if your company has NO website.

If you have any questions, my contact information is at the end of this report. You can also visit <https://www.profitingsites.com/contact-us> with any comments or questions.

Lastly, while great efforts were taken to ensure all statistics and information on this report is 100% factual, there is always a gap between the time we published the report and the time from when we update it again.

You are reading it in the gap. New statistics will be updated as soon as we compile them. This report was last updated 6-1-2017.

OK, Let's Talk About The 11 Reasons You Need To Get Compliant Now....

It took 46 years for the www to create 4.73 BILLION users. It took 17 years for the MOBILE network to surpass 4.8 BILLION... and we're just getting started.

Who would have imagined a day when consumer experience would dictate the role search engines would play. And, who could have imagined the day would come when the fate of companies both big and small, would be determined by their reputation to the search engines?

We did our best to keep this report as short as possible. Still, it is a bit lengthy... but extremely valuable content if you would like to know the truth about why millions of companies have disappeared from the people searching for them, and are silently being starved out of business.

INTRODUCTION: (from 2011)

With the proliferation of smartphone usage exploding, the time to have a mobile responsive website has never been a more required, and profitable decision.

Mobile websites are a great entry point for businesses to "get into" mobile marketing because, quite simply put, in today's digital world it's never been more important for local businesses to engage with growing mobile audiences.

Anyone thinking of implementing a mobile website should remember that people consume information very differently when they're browsing the Internet on their mobile devices as opposed to their desktop computers.

Traditional websites are designed for access from a desktop or laptop computer, where the screen is large and the site is easy to navigate using a mouse and a full-size keyboard. For this reason, these websites typically offer a rich and interactive experience, and are designed to engage the visitor, build brand awareness and drive users to offline sales channels.

But when someone accesses a website designed for desktop computers from a mobile device, the last thing they want to see is the full-size website shrunk down to fit into their small screen, making it impossible to read or navigate without zooming and panning. ***(The above was published in 2011)***

Today we're going to discuss the impact mobile has brought to the user, search engines, and businesses. We'll also discuss the difference between web based, "mobile version" (non-compliant), and 100% RESPONSIVE smart website design (compliant).

Mobile users want to land on a website that immediately presents the key information quickly, cleanly and concisely. They want a website that is easy to read and has the key information immediately accessible. Search engines want their customer to have a great experience.

Statistically, 78% of mobile users leave the website immediately upon landing to realize it is not mobile responsive. Of the 22% who stay, they leave after 7 seconds of searching.

99% OF YOUR ADVERTISING DOLLARS ARE BEING WASTED- since the customers you motivate to buy go to your website on their mobile device before calling 86% of the time. Once they find your website will not serve them, they go back to Google, search for what you offered them, and they are then sent to the nearest competitor offering the same service or product...who has a compliant website, and BAM... they get the sale.

Mobile visitors usually want to get in and out quickly, having found the specific information they were looking for. They are not interested in browsing or reading extensively on their tiny screen.

In addition to the consumer needs, Google who controls and directs nearly 90% of all web, mobile, and now LOCAL shoppers where to go, have one specific purpose in their directing. That purpose is to get the shopper to the most relevant website(s) that has proven in the past to deliver the best results for same type shoppers.

Sending your shoppers to a web-based website is just as disastrous as sending them to a mobile "version" website. Google very clearly advised in January 2017 they are done sending their customers to NON-compliant websites. Neither a web-base, or any of the mobile "version" plug in style software are compliant.

Statistically, 8 out of 10 small to mid-sized companies have been sold the same exact "NON-compliant" website software. That software was released in 2005. All the big name website sellers offer that platform because it is free to them, it is open source so they can edit and personalize it easily, and they can make large profit margins because it is free to use.

Whether you are an entrepreneur, a local services agency, physician, dentist, auto repair, contractor, consultant, restaurant, or any type of brick and mortar retail store, here are 11 reasons why you need a 100% RESPONSIVE, 100% SECURE, Google compliant website to serve the web and mobile marketplace from one smart website.

A 100% mobile RESPONSIVE or E-commerce website that is designed, built, managed, and marketed properly, will launch your business to an entirely new level... and ensure its sustainability with the new 2017 updates and beyond.

1. **THE NUMBER OF MOBILE INTERNET USERS IS STILL EXPLODING**

The mobile audience is already huge and is growing rapidly. If you're wondering why your company should care about serving mobile customers, take the time to look at these statistics from a few years back.

According to a study by Boston Consulting Group, Morgan Stanley Research and Berg Insight, "Global Internet usage more than doubled in 2015, and most of these users are mobile users."

Another study in 2011 by Mobile Marketing Association Asia unearthed the fascinating fact that, of the 7 billion people here on Earth, 5.1 billion own a cellphone while only 4.2 billion own a toothbrush!

Even though not all of these 5.1 billion cellphone owners have a smartphone, the number of smartphone users is growing rapidly as low-budget 3G capable smartphones have become increasingly available in the past few years.

In 2011, Goldman Sachs forecasted that in the United States alone, 81% of American cellphone owners would use smartphones by 2015. The transition to smartphones is well under way.

With developing and emerging economies quickly upgrading their telecommunication infrastructures to newer high-volume and high-usage data networks needed to accommodate smartphones, we are well on our way to meeting these projected statistics.

All of those estimations came true, and **in 2016 Google's BILLION dollar mobile marketplace surpassed web based users.**

2. **BILLIONS OF DOLLARS ARE BEING MADE FROM MOBILE MARKETING**

Any local business without a responsive and secure website has REMOVED itself from a multi-BILLION dollar per year marketplace. “Mobile marketing is the fastest growing industry in history, and was expected to skyrocket to over \$50 billion by 2015.” It did!

The mobile marketplace is exploding as more and more people are shifting their spending from the “regular marketplace” to the “mobile marketplace”. People have become so comfortable purchasing online, that during the last few years online sales have EXCEEDED offline sales.

Now it's 2017 and nearly 81% of online purchases were made from mobile users in the last quarter of 2016. Think about that.

This level of comfort has carried over to the mobile marketplace as people do their banking, research products and make purchases from their mobile devices with a few taps of a screen.

If your business is not serving the mobile buyer, the amount of revenue you're losing is staggering.

New technology makes purchasing via a smartphone or mobile device safe, secure, extremely simple and very convenient. Orders can be placed from anywhere a person happens to be... on the road (hopefully not when driving), at work, relaxing away from home, or even while meandering through a store.

“100% Responsive technology allows your website to easily be found and enjoyed by EVERY shopper no matter what device they're on. Web based and mobile-version websites do not.

Wise business owners who get RESPONSIVE now will find themselves way ahead of their slow-moving competition within the exploding LOCAL mobile marketplace.” At profiting websites, all of the websites we produce are 100% responsive, and 100% encrypted SECURE. We'll explain why in just a bit.

Think back to only a few years ago. Who could imagine that there would ever come a time when so many of us would feel comfortable buying online in total safety?

Or who would have thought that most companies would advertise their website and Facebook accounts on TV and in printed materials, and that their 1-800 number would become almost a footnote (if it was included at all)?

And who would have believed that local businesses could have a direct outlet to their customers, with the ability to reach them in real-time because of mobile technology?

Your business serving EVERY shopper on one platform IS now mandatory if you plan to succeed in this new MOBILE marketplace.

Just make sure you chose the right partners with the best platform, training and support, and marketing skills. Then, get in before your competition beats you to it!

3. **YOU MUST SERVE THE ALL BUYERS TO SUCCEED...**

The most important reason why you need a RESPONSIVE website is... to serve the masses.

Having mobile capabilities available right out of your pocket or briefcase can often be the difference between closing the deal and losing the opportunity forever.

The mobile marketplace is growing larger by the day; they are consuming the Internet in ways that we could have never comprehended a few years ago.

As with most sweeping trends, the markets are also changing to adapt to these new users. Your job as a business owner is to find better ways to attract, engage, and educate your prospects.

By doing this, they will trust you and become loyal to you. The mobile buyer is a completely different shopper than what the old age of businesses are used to.

4. **DESKTOP WEBSITES ARE DIFFICULT, IF NOT IMPOSSIBLE, TO VIEW ON A MOBILE DEVICE**

Don't fall into the trap of thinking you don't need to serve mobile buyers because your regular website can be accessed from mobile devices. There are over 4.7 BILLION web based users. Many used to be local shoppers... but that has changed.

Yes, most websites can indeed be accessed from mobile devices but the question you have to ask yourself is, **"Does our website give a fantastic user experience to ALL devices?" Is your website 100% responsive?**

According to a study done by Google, “nearly 2 in 3 users are unlikely to return to a mobile site where they had trouble and 40% said they would rather visit a competitor’s mobile site instead.” (2012)

In addition, according to Limelight Networks, Inc., 80% of customers leave a mobile site if they found it difficult to navigate or use. (2011)

IF YOU THINK YOUR CURRENT WEBSITE IS PERFECTLY FINE WHEN ACCESSED FROM A SMARTPHONE, TRY THIS SIMPLE TEST:

- **Pick someone you know** that will tell you the truth (and who is not familiar with your website), and have them visit your website from a smartphone.
- **Ask them to do some simple tasks**- find your phone number and give you a call, find your address and get directions, explore reviews, menu items, services and more.
- **Observe as your friends or coworkers struggle** to accomplish these mobile tasks on a smartphone. Afterwards, ask them for their feedback.

If they did not already know you and were simply browsing on a smartphone, would they have stayed on your website as long as they did?

If it takes them more than a few seconds to accomplish any of the tasks, you can be sure that your regular website is costing you a lot of business from mobile users.

By not offering a mobile friendly website, you are literally sending business to your competitors who offer a mobile friendly website to their current and prospective mobile visitors!

Experience it for yourself. Will YOU stay on a website that is difficult to navigate when viewing it from your smartphone or tablet?

Most likely the answer is **NO!**

Here are a few of the reasons why it’s hard for anyone to view a desktop website on their tablet or smartphone:

- **Most smart phones do not understand flash based navigation**- There are a lot of smartphones that cannot understand Flash, including the approximately 190+ million

iPhones on the market. If your site uses flash, then it will appear to be blank when one of these phones try accessing it.

- **Heavy use of the wrong videos can be costly to your visitors-** Videos are a great way to entice users to stay on desktop sites and share fun or informative content. However, with mobile data costs being expensive, having too many videos on a site will cost visitors a lot of money (if they can even play the videos to begin with).
- **Links to external sites often create a problem for mobile visitors since only 2% of all websites are optimized for mobile-** Sending mobile visitors to a non-mobile site will create a bad user experience and will reflect in the bottom line.
- **Large page sizes are fine for desktop viewing, but are a nightmare for mobile viewing-** If a website is greater than 50 KB then the time it takes to load may create an undesirable user experience for your mobile visitors.
- **Large Images waste user resources and can confuse the mobile visitor on where to navigate next-** Large images that do not automatically resize for mobile devices can take up the entire screen of a mobile device. This can take too much time to load and can confuse the user on where to navigate next.
- **Large Pages of written content, common to desktop websites, are despised by mobile visitors-** Most pages on a typical website are designed to be viewed on a wide screen monitor (1280x800 or higher) which is about twice as wide as the screen on a mobile device.

A web page designed for a wide screen will force the mobile visitor to scroll back and forth in order to read the page, annoying the visitor and causing them to leave and take their business elsewhere.

- **Horizontal Scrolling is a leading cause of frustration for mobile users-** Due to the 480px width restriction on mobile phones, horizontal scrolling is a leading cause of frustration for mobile website users.

Often mobile browsers force all the content into the 480 width, which causes undesirable visuals and miss-aligned text and images. These annoyances will quickly drive away visitors (along with their business).

- **Pop-ups (so commonly used on regular websites) are a big problem for mobile visitors-** Most mobile browsers have a limit to how many windows can be opened at once and when a pop-up opens, the previous browsing window is replaced by the pop-up. This often confuses the user since they do not know how to navigate between mobile browsers. Google began flagging websites with pop ups in January 2017.

SO WHY ARE MOBILE WEB USERS DIFFERENT THAN DESKTOP WEB USERS?

MOBILE USERS HAVE A SENSE OF PURPOSE

Mobile visitors are not browsing; they are looking for specific answers. When you are in the comfort of your own home you can leisurely go to a website and navigate through many of its pages, reading and reviewing the content.

However, when you are on the go, life is hectic and you don't have time to spend 30 minutes on a single site. You only have a few minutes (sometimes seconds) to complete a task until you need to move on to the next task or destination.

Mobile visitors are never just browsing, leisurely reading your client's website. They are typically on the move. So when they access a site from a mobile device, they are looking for specific answers, and they want those answers right now!

MOBILE USERS ARE ON THE GO

At home you are sedentary when browsing the web; sitting in bed, at your office table or on the couch. Either way you are not moving around the house while browsing, this is mainly because you need to use a mouse and keyboard to navigate. While on your mobile device you are usually walking down the street holding your phone in your hand, trying not to run into anyone or anything.

Mobile users are constantly on the go. They are usually moving from one place to another. They are trying to do several things at the same time: walking, talking, searching the Internet on their smartphone, etc.

They are trying to accomplish as much as possible in as short of time as possible.

SIZE MATTERS

Over 85% of desktop browser sizes are greater than 1280x800 pixels, which is roughly double the size of the common mobile device width at 480 pixels wide. If a page has more than 300 words (at 12 point font) then the scrolling on a mobile device is quite long and users will lose interest. Further, images that are greater than 480 pixels wide lend to poor user experiences on mobile devices.

A site optimized for mobile should have no more than 300 words and should fit perfectly on a screen that is only 480 pixels wide.

But most typical websites are designed for desktops with widescreen monitors (1280x800 pixels or more) so these websites will only annoy a mobile visitor by forcing them to scroll back and forth to read the screen (or better yet, leave the website for a competitor's easy-to-read mobile optimized website).

MOBILE VERSION WEBSITES CREATE A TERRIBLE EXPERIENCE FOR USERS AND SEARCH ENGINES!

Prospective customers who are using a mobile device to search for your products or services are being driven away by the awkwardness of trying to find what they need on your website. This is why mobile ready and mobile sites are deemed non-compliant.

5. IN 2015 GOOGLE ANNOUNCED THEY WOULD GIVE PREFERRED TREATMENT TO WEBSITES WERE MOBILE READY.

When Google announced their new 'get mobile or get out' algorithm back in 2015 it created a flurry of mobile-version software. Over 600 MILLION businesses were sold mobile "version" software that created a mobile version of their web based website.

So, if you have one of these, it allows web based computers to see your website, and then mobile users automatically see the mobile "version" of your website. This software proved to be nothing short of horrific to shoppers, and the search engines.

When someone does a search from their mobile device, Google is serving different results to them from what they would see if they had done the same search from their desktop computer.

This is because Google has different search algorithms for mobile devices than on PC devices, and the search engine giant now prefers sites that are faster and more useful overall.

Since Google is trying to prioritize the delivery of content that will work best for the device that is doing the search, a mobile user will be offered mobile-optimized websites ahead of non-mobile websites.

This has significant implications to your clients as business owners. If your clients rely solely on reaching visitors with their standard, wide-screen website, then mobile visitors searching for products or services may not find your clients very easily, and even if they do find them, they may leave their sites quickly because of the frustration factor in navigating a hard-to-use website.

The revenue from mobile visitors is already astronomical, and it is growing at an explosive rate. In fact, according to PQ Media, the Compounded Annual Growth Rate (CAGR) of mobile and social media revenue from 2006 to 2011 was 28.7%, and is set to explode! They have since tripled.

In plain English, that means that mobile revenues are more than doubling every three years! Never underestimate the power of mobile browsing or the impact it can have on business.

More and more people are browsing the Internet from their mobile phones even when they are relaxing at home. In fact, Yahoo! found that "86% of mobile Internet users use their mobile device while watching TV, with 53% of those browsing the Internet for non-related TV material."

All of these users and all of the data... and the search engines being forced to adapt to web based, and now hundreds of mobile version software... something had to give.

6. MOBILE SEARCH PLAYS A VITAL ROLE IN PURCHASING DECISIONS

Smartphones can be used as an organizer, a shopping list, a music player, a gaming console, a camera, a map, and even as a shopping companion.

A Google/Ipsos study said that 79% of smartphone users utilize their devices to help them with shopping decisions and 74% make a purchase because of the information

that they got from their smartphone. (2010) The same results rose to 88% and 87% respectively in 2016.

When you understand that a smartphone typically becomes the most important tool in the life of its owner, you will never again underestimate the power of its influence. Instead, take advantage of this knowledge by creating an attractive, mobile-optimized website to attract more customers to your website.

This is extremely important for mobile SEO! The 100% responsive website design platform we build client sites on here at profiting websites come with smart technology that actually live feeds to Google... back and forth. Imagine how this factors in when they must decide what website to send their visitors to.

7. MOST LOCAL SEARCHES START ON A MOBILE DEVICE, AND ARE ACTED ON IMMEDIATELY

Quite simply put, people now buy... NOW! This is better explained with statistics from Google:

- 95% of smartphone users have looked for local information
- 88% of these users take action within a day, indicating these are immediate information needs
- 77% have contacted a business, with 61% calling and 59% visiting the local business
- 61% of local searches on a mobile phone result in a phone call

People now rely on their smartphones to find lawyers, technicians, wedding planners, emergency car repair, plumber, pet services, dentists, doctors, cabs and every other local service that you can think of.

MAKING SURE THAT YOUR PRODUCTS AND SERVICES ARE EFFECTIVELY PROMOTED WITH A MOBILE WEBSITE CAN MAKE A HUGE DIFFERENCE IN YOUR BOTTOM LINE.

8. MOBILE "APPS" AND "VERSION" BAND AID SOFTWARE IS OUT, AND 100% RESPONSIVE TECHNOLOGY IS DRIVING US FORWARD

There was a time when mobile apps were considered the best when it comes to mobile advertising... but that time has passed.

Although mobile apps are still used as tools for businesses to interact with their own customers and prospects, generalized apps have lost their popularity. This is because

responsive websites are now preferred and mandated by Google. We'll explain more on this in just a bit.

In a recent study conducted by Adobe & eMarketer they found out that 89% of mobile users prefer mobile sites over apps for price research, 79% for product reviews and 79% for purchasing.

There are lots of possible reasons for this. First, apps take time to download, sometimes request personal information, must be installed and consume user memory. So people are becoming more careful in the apps they choose to download, selecting ones that have a long-term benefit as opposed to fulfilling a one-time need (such as discovering a new local business).

Second, when someone does a mobile search for information, they want to find that information quickly without having to first download and install an app. This is especially true if a customer is simply looking for quick info on a product, service, or looking for a specific review.

In this situation, a RESPONSIVE website can quickly serve up this information for the customer. From a business point of view, another reason that responsive websites have gained popularity over mobile apps is that most apps are device specific – meaning, some apps will only work for iPhone, Android, BlackBerry, etc.

RESPONSIVE websites, on the other hand, can be opened and deliver a wonderful user experience to ALL smartphones, PC, tablets, TV's... or any device that comes in the future.

So a 100% responsive website should be the FIRST thing a business implements in order to take advantage of the May 2016 Google announcement stating they will now favor responsive design over all PC and mobile version websites.

Another important factor to consider is the difference in cost between a mobile app and a mobile website. A mobile app can cost several times as much as a mobile website, and should be considered only after the successful implementation of an easy to use, clean, practical mobile website.

Both will cost you MILLIONS of dollars in lost revenue, when all of your all of your prospective customers are being sent to the 100% responsive competitors around you.

9. OUR 100% RESPONSIVE WEBSITE LIVE STREAMS WITH ALL FORMS OF MARKETING, DEVICES, AND TECHNOLOGY AND PLATFORMS

From using a QR code to Youtube, Social media, Google, the 1,000's of search engines, BILLIONS of shoppers... our 100% RESPONSIVE technology live feeds 24/7 with any and all software.

This is absolutely GROUND BREAKING technology. Our technology is shared with the world leading retailer Amazon... seriously.

Whether you understand all the reason behind the success of Amazon or not, one thing is for certain... the technology they're using is the same technology that will be the death of MILLIONS of businesses in 2017 and beyond.

Statistically, the top ranking and producing sellers industry wide, have ALL implemented the Profiting Websites platform as the foundation for their company.

10. GOOGLE RECENT ANNOUNCEMENTS CLEARLY OUTLINE 'WHY' BUSINESSES WILL GET RESPONSIVE... OR SIMPLY GO AWAY

With all the mobile version software and apps, and the frustrated and disgruntled users they created, we knew this day was coming from the signs Google sent up.

However, nobody could have guessed they would have made such a bold move that would bring such devastating effects to non-complaint companies.

Google announced in the spring of 2016 they would start giving preferred treatment to companies who utilized 100% responsive website technology vs. web based and mobile version software.

In September they announced that secure domains (https) would start receiving preferred treatment vs. NON-secure (http) domains.

The January 2017 Google algorithms are literally BLOCKING up to 98% of shoppers who are looking for your goods and services, if you do not have a RESPONSIVE and SECURE website.

They have also started placing “THIS WEBSITE IS NOT SECURE” on all NON-secure (http) websites when visitors go to those websites. This will have nothing short of devastating effects on LOCAL service companies just the same as retail.

The days of ‘getting by’ with part time website designers and pretend marketing companies have come to a close. This is truly a “GET IN and PROSPER” or “WATCH it ALL GO AWAY” scenario that millions of businesses are being faced with.

11. THE TECHNOLOGY IS AVAILABLE, AND WE MAKE IT EXTREMELY AFFORDABLE!

While you may think that owning a 100% COMPLIANT website is an expensive technical feat, it’s not with us. We make it extremely easy and affordable to not only own a 100% compliant website, but our software will also make it extremely profitable to you.

With our technology, expertise, and low cost factor... you can no longer afford or survive operating a business without a 100% RESPONSIVE website platform. Nor can you complete with what many mobile version software companies, template sites, and Wordpress plugins label as mobile “responsive” websites.

Having that software means a person searching for your goods or services one mile from your company will be sent to the nearest competitor who is utilizing a 100% google COMPLIANT website.

It’s true. The fate of your company now comes down to your online reputation.

Why? Because now that Google clearly stated they will favor 100% responsive and 100% secure websites over all others, well... that means all LOCAL traffic is now sent to RESPONSIVE sites!

Furthermore, when your business is placed on the ONLY LIVE STREAMING and AUTOMATIC UPDATING with Google website platform... you’re instantly “IN”.

This is being felt around the globe as the majority of businesses have literally been ERASED from the people searching for them. At the same time, the companies running our technology... companies like Amazon... are completely dominating the globe.

And that, that my friend is what is going on right now... behind the scenes.

Take a minute to take all of this in. Industry analysts predicted these new changes and updates will literally be the death of nearly 72% of businesses who fail to get compliant now.

At the same time, this new era will bring dominance and prosperity to others, far beyond their wildest dreams or business goals.

And this, this is why we recommend you seriously consider placing your business on the #1 100% Google compliant platform of Profiting Websites.

As business owners, we have decisions to make. There comes a time when we must clearly assess what is working and what is not. Then, we must adapt to move forward, or chose not to.

Profiting Websites are sleeker, quicker, and more user-friendly than any other software on the planet. They're 100% responsive utilizing the latest in technology to properly display across ALL platform phones, including iPhone, Android, BlackBerry, Windows Phone, TV's, all tablets, TV's and whatever else comes in the future.

Our smart sites are favored by Google. They automatically update with Google. They automatically attract, engage, convert, sell, schedule, register, and nurture prospects and clients.... 24/7 on AUTO-PILOT!

RESPONSIVE websites are here to stay, and the mobile marketplace will continue to get bigger and more prosperous as technology improves. Imagine how nice it would be, knowing your company is on live technology that will never need to be replaced.

Each Profiting Website comes with OUR TEAM! You'll never again have to worry about updates or being in this situation again. You'll never again be held hostage by designers, agencies, or don't have your best interest in mind.

So if you are reading this right now and wondering when will be a good time to get a 100% compliant website to GROW your business? The answer is... **YESTERDAY!**

At Profiting Websites we provide the top performing 100% responsive websites that, well... that out-performs everything... hands down. They out-rank, out-perform, and out-profit all other options because you have one website that serves all customer devices.

Smart technology, robust intelligent design, attracts, engages, and converts customers like never before.

What option is best for you? Take the time right now and get a no obligation [QUOTE REQUEST](#) from our team here at ProfitingWebsites.com.

To your success,

John K.
