

Tools for skill management

It is a Competences Management Software:

- It creates and collects a dynamic repertoire of competency standards;
- It analyzes and matches individual skills with the skill levels expected for each of the standards included in the repertoire;
- It gives you back, in various forms, the results of the matching.

It was born in 2003 as a local database. Now it is the 3.0 release of a web application:

- Indica is a relational database (MS SQL) and a graphical user interface (HTML5);
- Indica resides on a secure server;
- Indica is always accessible via web, via any Internet browser.

Indica allows you to:

- Obtain needs analysis and professional skills;
- Competences assess;
- Create and update dynamic repertoires of skills;
- Work out quantitative and qualitative statistics.
