Description: The E-STOP Gas Timer is an emergency shut-off, mechanical timer, and manual shut-off gas valve designed to be installed on the inlet side of a gas appliance to enable the user to control the time gas is allowed to flow to a gas appliance. This is a mechanical timer (no batteries or power required) that has the ability to control gas flow for 1-hour (60 minutes) using the ESTOP1-0H model or 2.5-hours (150 minutes) using the ESTOP2-5H model. In addition, both models have an emergency shut-off (red knob) that enables the user to quickly and easily shut the gas completely OFF, should the need arise.

The E-STOP Gas Timer body is 4-inches high x 2 ¾ -inches wide x 2 ⅛ -inches deep and can replace a manual shut-off valve and meet local code requirements as the accessible shut-off valve. It can be use for multiple applications (indoor or outdoor) from gas fire pits, gas grills, gas logs, gas torch lights, etc., wherever a shut-off valve is a required or a specified by a manufacturer, code requirement or customer.

Specifications:
- Pipe Size: ½” NPT (2) inlets and (2) outlets
- CSA Rated Capacity: 165,000 Btu/Hr at 1” Pressure Drop (NG)
- Timer Accuracy: 60 Min. +/- 15% or 2.5 Hrs. +/- 15%
- Multiple Mounting Holes: Uses 3/16-24 machine threads
- CSA Certified: Tested to ANSI Z21.21; CSA 6.5

Maximum Pressure: ½” PSI
Ambient Temperature: 0°F to 175°F (79°C)
Inlets: Have fine mesh screens to filter any debris
Design For: Natural or LP Gas (no conversion required)

CALIFORNIA PROPOSITION 65

WARNING
This product can expose you to Lead, which is known to the state of California to cause cancer and birth defects or other reproductive harm.
(For more information, go to www.p65warnings.ca.gov)
Mounting
The E-STOP Gas Timer has the ability to be mounted from the side of the body, using the four (4) provided holes (two mounting holes per side) or using the two mounting hole tabs at the top and bottom of the body when facing forward. Each mounting hole uses 3/16 - 24 machine screws to secure it into position. **Note:** We recommend using stainless steel screws for any outdoor applications. See Fig. 1 for details.

**Table 1** Pressure drop and capacity for Natural Gas.

**Table 2** Pressure drop and capacity for LP Gas.

*Note:* Pressure drop information listed is generated in American Flame lab and is to be used as reference only.

**Fig. 1** E-STOP Gas Timer mounting hole locations applicable to both models.
Installation
The E-STOP is designed to be installed in an up-right position as shown in Fig 3, view “D” or Fig. 4. It has two (2) inlet and two (2) outlet gas connections. The diagrams below provide possible ways to plumb the E-STOP (See Fig. 3). Two (2) ½” NPT plugs are provided with the E-STOP. Plug the inlet and outlet connections not being used for the application. Connect gas supply to the inlet with the arrow pointing into the valve. Connect outlet side to the gas appliance (See Figs. 2 & 3 for details).

NOTE: Conduct a gas leak test on the E-STOP Gas Timer after plumbing is complete.

Operation
TO TURN ON
Step 1: Rotate the clear timer dial past 20 (ESTOP1-0H) or past 0.5 (ESTOP2-5H) to set the time. Timer will begin “ticking” when the dial is turned while the countdown time is set.
Step 2: Turn red knob clockwise (about a ¼ turn) until it pops outward. Gas will now flow to enable you to light the appliance.

TO TURN OFF: Let timer expire or simply press red knob inward until it stops. The red knob will lock down with a “click” and stop gas flow. See Fig. 4 and Fig. 5 on following page.

CAUTION: Do not force the timer dial to the OFF position after time is set. This will weaken the spring inside the timer body and can affect the accuracy of the time. If it is necessary to shut the timer OFF simply press the red knob inward to stop operation. The timer will turn itself OFF when the time expires.
TROUBLESHOOTING

<table>
<thead>
<tr>
<th>Symptom</th>
<th>Remedy</th>
</tr>
</thead>
<tbody>
<tr>
<td>No gas flow</td>
<td>1. Rotate dial beyond the “turn past” position.</td>
</tr>
<tr>
<td></td>
<td>2. Ensure red knob is protruding outward in ON position.</td>
</tr>
<tr>
<td></td>
<td>3. Has time has expired on timer? If so re-start timer again.</td>
</tr>
<tr>
<td></td>
<td>4. Ensure primary gas supply is turned ON.</td>
</tr>
<tr>
<td></td>
<td>5. Ensure the gas timer is plumbed properly.</td>
</tr>
<tr>
<td></td>
<td>6. Look for any physical damage.</td>
</tr>
<tr>
<td></td>
<td>7. Ensure other gas valves before or after the timer are operating.</td>
</tr>
<tr>
<td></td>
<td>8. Check inlet mesh screen for debris blockage.</td>
</tr>
<tr>
<td>Gas flow won't stop</td>
<td>1. Timer plumbed backwards? Check inlets and outlets on timer.</td>
</tr>
<tr>
<td></td>
<td>2. Excessive gas pressure exceeding the ½” PSI maximum pressure.</td>
</tr>
<tr>
<td></td>
<td>3. Plumbed into both inlet lines and not one of the outlets.</td>
</tr>
<tr>
<td></td>
<td>4. Look for any physical damage. If so, replace timer.</td>
</tr>

Limited Warranty
The E-STOP Gas Timer is warrantied for 12 months from the date of purchase or installation to the original purchaser to be free from defects in materials and workmanship. It is designed for INDOOR OR OUTDOOR USE. Damage to the E-STOP Gas Timer caused by accident, misuse, abuse, or installation error, whether performed by a contractor, Service Company, or owner, is not covered by this warranty. American Flame will not be responsible for labor charges and/or damage incurred in installation, repair, replacement, or for incidental or consequential damage. Some states, provinces, and nations do not allow exclusion or limitations of incidental or consequential damages, so the above limitations or exclusions may not apply. This warranty gives you specific legal rights. You may also have other rights that vary by state, province, or nation.
