

DATABRIDGE

for **SuperOffice**®.

 **SuperOffice**® Certified Software Partner

**INTEGRATE
SUPEROFFICE
WITH YOUR
BUSINESS APPS**

MOST WIDELY USED INTEGRATION PLATFORM FOR SUPEROFFICE®.

How it works

Getting data from cloud and on-premise applications into **SuperOffice®** is one of the biggest challenges for SuperOffice administrators, especially when it comes to figuring out which integration platform to use. **DataBridge** is the #1 data integration platform available through the **SuperOffice® AppStore**.

DataBridge is quick, secure, easy, and much more. Here's how DataBridge makes it easy to get data from and into SuperOffice:

Cloud-based: 100% cloud-based solution, which means no download is required.

Secure: DataBridge uses OAuth 2.0, so you can get started quickly without compromising security. All data used is encrypted and secured.

Easy to use: a step-by-step process allows you to import and export information in a breeze.

Smart mapping: you can spend less time mapping data with features such as entity selection and search filters.

Advanced features: get advanced with the onboard transformation blocks which transform in and outgoing data.

Powerful: export/Import unlimited records with **DataBridge**. exporting related objects through a single pull removes manual and redundant work required to pull multiple datasets and re-associate them in Excel.

Integrated: import and export data directly from DropBox, Microsoft One-Drive, Google Drive, FTP, and SFTP repositories quickly and easily.

Schedule in advance: schedule tasks to import and export data automatically.

Trigger & webhooks: use triggers or webhooks to initiate export/import actions.

DataBridge Loves SuperOffice CRM: access all standard entities like contacts, persons, activities, and many more.

DataBridge Loves SuperOffice Service: importing into entities like tickets and customer tables.

For pricing or more product information, please go to databridge.infobridgeuniverse.com or give us a call at +31 (0) 73 627 27 10.

Scheduling
Schedule integration routines to save time and reduce error.
