

# Six Years' Strong Evidence Shows Massive Improvement To Bearing Rates

## If you're looking for improvement to bearing rates, keep reading...

**We fix bearings, and we can prove it!**

Seven years ago we were contacted by a farmer who's stock had serious bearing issues (40 ewes out of 1000 were afflicted by the condition). For the last six years, our methods have reduced these numbers to four (or less) ewes per 1000 per year. Other farms under the care of KC Fert are having similar success.

**Do you want to enjoy similar success?**

**KC Fert Pasture Ultra provides:**

- Quality pasture growth
- Thistle control
- Porina control
- Up to 90% reduction in bearings

*Extra fertiliser or trace elements can easily be added to the one application for individual pasture requirements*

**KC FERT**  
*Growing robust agriculture*
