Back in Time for Windows 8 by LANDKA

A voyage of exploration through the history of our Universe, Earth, Life and Civilization. Back in Time invites you to take a step back and see the whole picture.

June 13, 2013 – LANDKA announced today the release of the award winning educational app "Back in Time" for Windows 8.

"Back in Time", developed by LANDKA, was initially released in September 2011 for iPad. The app was considered by The New York Times as one of the 10 best iPad apps of 2011 and was a winner of the WSA Mobile Award 2012 in the m-Learning and Education category.

This porting to windows 8 is the result of collaboration between LANDKA and INTEL that started last year. "Back in Time delivers an innovative, fresh approach to facilitating education in the world of mobile applications", said Rick Echevarria, Vice President and General Manager of Intel's Business Client Platforms Division, "By building on the underlying technologies being delivered by Intel's recently released 4th Generation Intel® Core™ processor family, this exciting application seamlessly combines experiences utilizing touch and multi-tasking, bringing education to life."

"Back in Time maximizes the 2-in-1 benefits users receive, by utilizing the functionality provided in new Ultrabook™ form factors, delivering enhanced learning by seamlessly combining content creation and consumption experiences", Rick Echevarria added.

Back in Time covers a wide range of events in different timescales: the shaping of our Universe, billions of years ago... humankind's first steps, several millions of years ago... and the major events in the history of our Civilization, thousands of years ago. The perception of time in events taking place in such different eras poses a problem to everyone, as these timescales are difficult to comprehend. Back in Time proposes a simple analogy: the whole Universe started 24 hours ago. The classic 24-hour clock allows an easier perception of the relative distance between events.

In the Back in Time imaginary clock, Earth was formed around 8 hours ago, the dinosaurs rose 25 minutes ago and ruled the Earth for 18 minutes and we, the homo sapiens, have little more than 1 second of existence.

The Windows 8 release includes some features specially designed for the classroom. The app has Microsoft OneNote integration allowing students and teachers to share notes, and supports Intel Wi-Di technology making it easier to be displayed on the classroom projector or on a large screen. The entire app content was redefined for Full HD to get the best image quality.

"Back in Time shows that learning can be different.", said Susana Landolt, founder of LANDKA, "We need to change the current education system. We have to engage our students in the learning process, to spark their curiosity, to bring out the full potential of their creativity. We are on the verge of important changes in education and I'm happy that Back in Time is a small part of it."

Back in Time is available for 32-bit and 64-bit CPUs (ARM not supported in the initial release).

Back in Time

FEATURES

Designed in Full HD;
300+ remarkable images;
60+ amazing animations and videos;
40+ illustrated timelines;
200+ little-known interesting facts;
Music by the composer Rodrigo Leão;
Developed in 7 languages;
No internet connection required.

Category: Education   Size: 910 MB
Release date: 2013, June 13
