

CALCIUM C

PHYSIOPATHY SOLVER
Solution of calcium chloride

COMPOSITION (%w/w)

Water-soluble calcium oxide (CaO) 16%

CALCIUM C is a liquid fertilizer based on calcium that helps reduce plant disorders such as bitter pit of apples, blossom end rot of tomatoes and capsicums, hollow heart of brassica crops and tip burn of lettuce. Calcium is an essential nutrient for the development of all plant tissues and its application assures a longer shelf life for all horticultural crops in all phases of plant growth. Specifically CALCIUM C:

- Stimulates maturation;
- Improves sugar concentration;
- Enhances fruit color;
- Strengthens fruit tissues.

Allowed in
**BIOLOGICAL
AGRICULTURE**

DOSAGE AND METHODS OF USE	CROPS	APPLICATION	DOSE
FOLIAR	Fruit Horticultural Floricultural Industrial	2-4 Throughout the cycle	250 - 350 ml/100L of water
FERTIGATION	Fruit Horticultural Floricultural Industrial	2-4 Throughout the cycle	15-20 L/ha

Warnings: Shake the product well before use. For any mixtures with other products, make preliminary tests. Observe the dosages shown. The product is not combustible and is stable at ordinary temperatures and pressures. Store the product in adequately ventilated rooms at temperatures between + 5 ° C and + 35 ° C.

FORMULATION

Soluble liquid
