

The **BS High Security Nightlatch** features an integral cylinder pull which protects the cylinder from being drilled. The cylinder also has well over 30,000 cut key variations. The Nightlatch also comes with a 20mm bolt throw for greater security and strength. This product is ideally suited for glass panelled wooden doors, as it has been designed with an ergonomic internal lockable handle offering added security against forced entry.

The main lock bolt "automatically" deadlocks, this makes the use of a credit card to force entry virtually impossible. The bolt can also be held in the withdrawn position (only) with the use of the snib feature.

The BS High Security Nightlatch conforms to British Standard 3621:2004 (BS EN 12209), and meets the tough criteria laid down by insurance companies and the Police.

BRITISH STANDARD KEYLESS EGRESS NIGHTLATCH

BS8621:2004

The conflict between a secure British Standard accredited front door lock and fire safety recommendations has now been overcome thanks to the new Keyless Egress Range.

The new **BS 8621:2004** standard mirrors the **BS 3621:2004** but is for 'escape' locks. The locks are classified as providing keyless egress at all times. This applies where there is a requirement for an easy action method of opening an external door from the inside with no need for keys or similar devices for unlocking. Especially relevant for entrance doors in multi-residential and other buildings. A keyless lever on the inside of the door ensures it is possible to make an emergency escape in the event of a fire.

DOUBLE LOCKING NIGHTLATCH

The ERA Double Locking Nightlatch is available in both 40mm and 60mm backset, designed to replace most existing front door locks. The product is ideally suited for solid and glass panelled wooden doors, as it has been designed with an ergonomic internal locking handle offering added security against forced entry.

The main lock bolt is "automatically" deadlocked when the door is closed, preventing the main bolt being retracted by a credit card. The inside handle can be deadlocked by an anti-clockwise turn of the key from the inside so securing the lock against forced entry. The bolt can be held in the withdrawn position (only) with the use of the snib feature.

The nightlatch case is available in brass, grey and a range of chrome finishes, with matching brass and satin rim cylinders.

The bolt cannot be reversed.

REPLACEMENT FRONT DOOR LOCK

The **Replacement Front Door Lock**, comes with the option of having a deadlocking or non-deadlocking facility on the external cylinder, also with a newly designed lock body with larger footprints which will hide most existing marks on the door. Accidental locking is avoided by a bolt hold back facility on the body of the lock rather than the handle. The easy grip handle is ideally suited for the elderly.

The Replacement Front Door Lock is available in standard (60mm) and narrow (40mm) sizes and with four case finishes; brass, satin, polished chrome and white, complete with either Brass or Chrome cylinders.

TRADITIONAL DOOR LOCK

The **ERA Traditional Door Lock** has been designed to replace most existing front door locks, providing added security to new exterior and interior doors.

The lock is suitable for left or right handed operation, inward or outward opening doors*. A simple snib button deadlocks the latch from the inside.

The Traditional Door Lock is available in brass or green finish, and has a choice of brass or satin finish cylinders, supplied with three cut keys.

*For outward opening doors the staple must be purchased separately (only available in Green).

NIGHTLATCH ACCESSORIES

ERA Replacement Cylinders are suitable for all ERA Front Door Lock models as well as other makes of front door locks. The Rim Cylinder has an advanced specification rim for added security. Each cylinder is supplied with 3 keys.

ERA Cylinder Pulls are designed to complement the range of Front Door Locks, providing an easy means of closing the door from the outside. The attractive door pulls are available in both solid brass (Victorian Style) and chrome.

ERA Cylinder Illuminator will ensure there is no more "fumbling around in the dark to find the keyhole", as it lights up the rim cylinder as you approach the door, so you can pinpoint exactly where the keyhole is.

The built in sensor only works in the dark and is triggered from about 5 metres away. The unit fits over the existing rim cylinder, so it is easy to retrofit the Illuminated Cylinder Pull to timber doors.
