FLY FORM

Concrete is poured on the top of the table. When hardened, the table is (1) lowered, (2) rolled outward toward the crane, (3) lifted, and (4) placed on the next level for pouring.

Variable spacing allows greater control over load capacity using A-Frames.

Compact design for easy transportation and storage.

Hinged table legs and extensions adapt the table to floor heights of 8 to 14 feet.

Braces, Jacks, Extension Tubes, Pins, Clamps, Beams, & Other Accessories for the 12 Kip / Leg Aluminum Shoring System are available.

Call to discuss your specific requirements.
