Series HSC Coalescing Type Hydraulic Separator

American Wheatley HSC Series Coalescing type Hydraulic Separators/Hot Water Buffer Tanks are designed to operate with modern high efficiency low-mass modular boiler systems. The American Wheatley HSC Series ensures minimal ΔT and provides the necessary thermal storage to prevent short cycling that could occur during low load conditions, along with the added benefit of a coalescing media for superior air and dirt separation.

Features:

- Prevents flow in one circuit form interfering with flow from another circuit
- Eliminates the need for a primary loop circulating pump, air separator, and strainer, thereby reducing initial cost as well as operating cost
- Eliminates complicated piping, reduces labor and piping costs
- High performance stainless steel ring type coalescing media
- Correctly installed hydraulic separation allows the use of multiple circulators to operate independently without interfering with each other
- Ideal for multiple load systems
- Standard sizes 40 gallon through 400 gallon with connections, 2" through 16"
- Custom sizes and pressure ratings readily available

Typical Specifications:

Furnish and install an American Wheatley HSC series, coalescing type vertical hydraulic separator as described on the drawings or schedule. Inlet and outlet connections shall be flanged unless otherwise noted. Unit shall be constructed of carbon steel and built in accordance with ASME Section VIII, Division 1, the nameplate manufacturer shall carry all applicable ASME certificates. Coalescing media must be stainless steel. Exterior shall be primer base coated.
