

SupraCath™

Two-way suprapubic catheters
with integrated balloon

The SupraCath range from Endotherapeutics offers several features to enhance patient comfort and allow maximum drainage through a smaller-sized puncture site.

The SupraCath Advantage

- Soft, medical-grade silicone is hypoallergenic and less prone to encrustation.
- Depth measurements ensure accurate placement during catheter exchange.
- Integrated balloon enables insertion through a smaller introducer and facilitates smooth removal by minimising cuffing difficulties.
- The open end reduces blockage and enables over-the-wire exchange of catheters.
- Large side eyes allow maximum drainage.
- Short tip reduces bladder irritation and is ideal for long-term drainage.

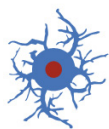

Available Sizes

- Sizes 10 Fr through to 24 Fr
- 14 Fr, 16 Fr, 18 Fr and 20 Fr in standard and short lengths

NEW!

All SupraCath sizes now come with a convenient luer lock spigot at no extra cost. The spigot can be easily removed if another valve to manage flow is preferred.
