

Morello, Croydon

Project: Redrow London, Morello

Location: Croydon, CR9 6BY

Roof Area: 6000m²

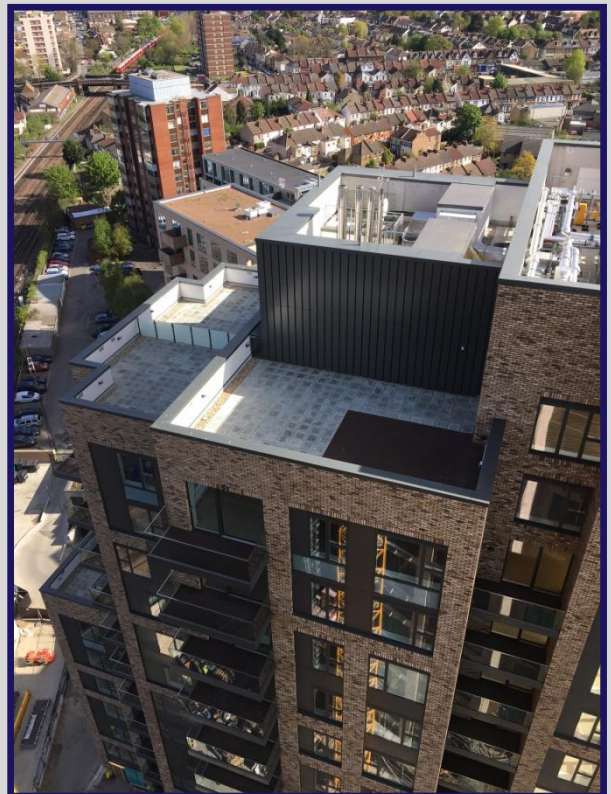

Specification: Alumasc Hydrotech and Mastergold

Morello is part of the £1 billion regeneration of Croydon.

Redrow and Menta, the developer, desired an aesthetically pleasing finish to suit to new look Croydon as well as durable waterproofing, which we duly delivered.

Alumasc waterproofing was specified at Morello. The bulk of this was Hydrotech hot melt structural waterproofing with inverted insulation and Marshall concrete paving slabs on pedestals. In some areas we utilised vacuum insulated panels within a Mastergold felt system to compensate for low thresholds whilst still meeting the required U values, these areas were then finished with Ecodek composite decking.

Since completing Morello, our first project for Redrow London, they have invited us to tender multiple other jobs, and we have started another project for them in Hackbridge; this demonstrates the high quality of our work as well as our ability to adhere to the strict program set.
