

Precision, Greenwich

Project: Weston Homes PLC - Precision

Location: Greenwich, SE10 0AG

Roof Area: 7800m²

Specification: Radmat Permaquik

The redevelopment of a former builder's yard in Greenwich into a new build block of residential flats, the developers were looking for a roof system which would offer long term waterproofing integrity, exceptional green credentials and enhanced aesthetics.

Working closely with our client, we were to provide a fast and effective waterproof system on program. The Radmat Permaquik system suited the requirements with a 14 day required curing time; we are a specialist contractor working with Radmat Waterproofing. The specification included the hot melt structural waterproofing, ProTherm G insulation and a mixture of green, biodiverse and paved roofs.

Working in close partnership with the Radmat field technicians we managed to successfully deliver the project on time and to a very high standard and detailing.
