

B31 Series Regulator

Light Commercial and Industrial Regulator

Applications

Appropriate for light commercial and industrial uses where inches of water column or pounds delivery is desired such as utility services, and small to medium sized furnaces and boilers. The rapid response of the B31 is particularly well suited for applications where sudden on/off loads could cause shock problems.

Descriptions

- > B31N The B31N is a spring loaded self-operated regulator with no internal relief (N) valve. This model can be used on low or intermediate inlet pressures where an internal relief or other type of over-pressure protection device is not required.
- B31R The B31R is the internal relief valve
 (R) version of the B31 Series. The 1" internal relief valve provides exceptional relief capacity.
- B31IMN The B31IMN is equipped with an Internal Monitoring (IM) device and no internal relief valve (N). This version is appropriate for applications where overpressure protection is desired without the relief of gas to the atmosphere.
- B31IMR The B31IMR is equipped with an Internal Monitoring (IM) device as well as a back-up Internal Relief Valve (R). This version is appropriate for applications where an added level of overpressure protection is desired.
- B31IMRV The B31IMRV is equipped with an Internal Monitoring (IM) device as well as a backup Internal Relief Valve (R) and a Vent (V) hole in the sliding orifice. The Vent hole option allows the relief valve to "weep" gas to the atmosphere and signal monitor control in the event the main valve fails to control the downstream pressure.
- B31RAS The B31RAS is equipped with a Low Pressure Shut-off Valve and Internal Relief. The low- pressure shut-off valve will close if the flow through the regulator exceeds its maximum flow rate (See Capacity Table for shut-off flow values). The internal relief valve will open if the down stream pressure rises approximately 7" w.c. above the regulator's set point.

Option Designations

- N No Internal Relief
- R Internal Relief
- IMN- Internal Monitor with no Internal Relief
- IMR- Internal Monitor with Internal Relief
- IMRV- Internal Monitor with Internal Relief and Vent
- HP- All models for outlet pressures > 0.5 psig
- RAS Internal Relief with Low Pressure Shut-off valve

Features

- > Field Interchangeable orifice
- > 27 in² of diaphragm area
- > Spring-loaded internal relief valve assembly
- > Interchangeable adjustment spring
- Controlled breather orifice size eliminates pulsation and provides normal actuation at low flows
- Wide range of NPT valve body sizes including mixed inlet and outlet sizes; angle body

Benefits

- > Smooth control at widely varying inlet pressures
- > Rugged construction
- Fast response protects equipment from shock damage
- Unmatched overpressure protection with Internal Monitor plus Internal Relief (IMR) option
- No special tools required for outlet pressure adjustment
- Designed to meet D.O.T., ANSI, CSA, and AGA-GAMA Safety Standards

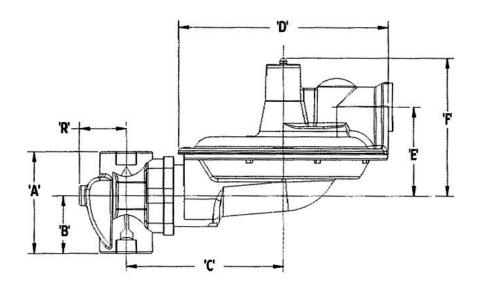

B31 Series Commercial Regulator

Shipping weight:

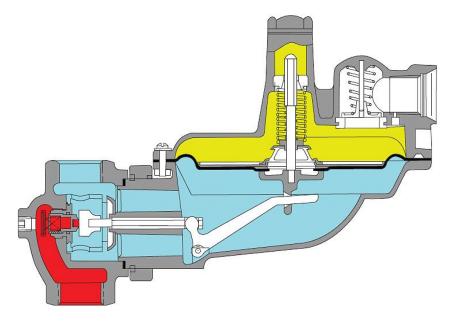

Eight regulators per box Box weight: 52 lbs.

B31 Dimensions (inches)

Operating Temperature Range

- -20°F to 150°F
- Silicone valve seats available for applications below -20°F

Additional Specifications

| Available Pilot Vent Sizes: | 1/4", 3/8", 3/4", & 1" |
|-----------------------------|---|
| Other Available Options: | Seal wire to indicate unapproved tampering |
| | 1/8" pipe plug tap on upstream side of valve body |
| | Tamper-Proof (Torx head) diaphragm case screws |

Itron takes pride in delivering American made products with the utmost concern for safety, quality, and customer satisfaction.

Construction materials:

| Valve body | High tensile strength cast iron (ASTM A-126, Class A) |
|--------------------------|--|
| Orifice | Aluminum -standard Brass -optional (ASTM B16, Alloy 360) |
| Valve seat | Buna-N or silicone (for temperature below -20°F) |
| Valve stem | Aluminum |
| Lever pin | Stainless steel (Type 303) |
| Lever | Zinc and dichromate plated steel (AISI C1010) |
| Upper diaphragm plate | Zinc and dichromate plated steel (14 gage steel) |
| Lower diaphragm plate | Die cast aluminum (ASTM B85 Alloy SC84A) |
| Diaphragm | Buna-N and nylon reinforcing fabric |
| Vent valve/seat | Neoprene |
| Vent screen | Stainless steel (16 mesh) |
| Adjustment ferrule | Delrin; Die cast aluminum for HP ver. (ASTM CS43A) |
| Seal cap | Die cast aluminum (ASTM CS34A) or ABS plastic |
| Diaphragm case | Die cast aluminum (ASTM B85 Alloy SC84A) |
| Internal monitor orifice | Brass (ASTM B16 Alloy 360) |

Valve Body Sizes

| Inlet (inches) | Outlet (inches) | 90° Angle | Straight |
|-------------------|--------------------|-----------|----------|
| 1/2 | 3/4 | - | Х |
| 1/2 | 1 | - | Х |
| 3/4 | 3/4 | Х | Х |
| 3/4 | 1 | Х | Х |
| 3/4 | 1-1/4 | - | Х |
| 1 | 1 | Х | Х |
| 1 | 1-1/4 | - | Х |
| 1-1/4 | 1-1/4 | - | Х |

Note: X indicates that the valve body is available in that configuration.

Correction factors for non-natural gas applications

The B31 may be used to control gases other than natural gas. To determine the capacity for gases other than natural gas, multiply the values within the capacity tables by a correction factor. The table below lists the correction factors for some of the more common gases:

| Gas Type | Specific Gravity | Correction Factor (CF) |
|--------------------------|---------------------|---------------------------|
| Air | 1.00 | 0.77 |
| Butane | 2.01 | 0.55 |
| Carbon Dioxide (Dry) | 1.52 | 0.63 |
| Carbon Monoxide (Dry) | 0.97 | 0.79 |
| Natural Gas | 0.60 | 1.00 |
| Nitrogen | 0.97 | 0.79 |
| Propane | 1.53 | 0.63 |
| Propane-Air-Mix | 1.20 | 0.71 |

To calculate the correction factor for gases not listed in the table above, use the gases' specific gravity and insert it in the formula listed below:

Correction Factor (CF) = $\sqrt{\frac{SG_1}{SG_2}}$

Where:

 SG_1 = Specific gravity of the gas in which the capacity is published.

 SG_2 = Specific gravity of the gas to be controlled.

Wide Open Flow Calculations

For wide-open orifice flow calculations use the following equations:

For P₁/P₂ < 1.89 use:
$$Q = K \sqrt{P_2(P_1 - P_2)}$$

For P₁/P₂ > 1.89 use:
$$Q = \frac{KP_1}{2}$$

Where:

P₁ = Absolute Inlet Pressure (PSIA) Q = Flow Rate (SCFH)

Notes:

*Individual regulator performance may vary from data shown.

A. Change in outlet pressure for 10 PSIG inlet pressure change.

B. Outlet pressure increase required for lock up.

Inlet pressure is too low to achieve desired outlet pressure.

Do not operate orifice in shaded inlet pressure area.

B31 Series Commercial Regulator – Models IMN, IMV, and IMR

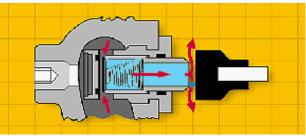

A. Standard regulator and upstream monitor orifice.

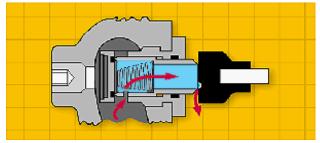

C. Main orifice failed - upstream monitor orifice *lock-up.*

Inlet pressure

Outlet pressure

B. Standard regulator orifice failed; upstream monitor orifice control.

D. *V* option - vents a small volume of gas to atmosphere through relief valve.

Principle of Operation

A. Normal operation. The internal monitor IM orifice performs like a standard regulator and monitor regulator in that main orifice and valve seat actuate to control outlet flow and pressure under normal flow conditions. If there is no demand, the main seat *and internal monitor orifice will close*.

B. Monitor operation. If the main valve seat fails to control the gas flow and pressure due to foreign matter between the seat and orifice face, or if the seat is eroded, the internal monitor orifice automatically goes into operating position at a slightly higher outlet pressure (see Internal Monitor Lock-up Pressure table). Any time the pressure on the main diaphragm exceeds the force of the fixed monitor spring, the increased outlet pressure causes the main valve seat to push against the sliding orifice. The sliding orifice compresses the monitor spring and positions the monitor orifice to control the gas flow. The IM orifice now functions as a monitor regulator and continues to monitor as long as the main seat fails to control at the normal adjusted outlet pressure. If the gas load demand is increased beyond the internal monitor's capacity, the outlet pressure is reduced to normal adjusted pressure and the regulator resumes normal regulation.

C. Monitor lock-up. If the demand for gas is decreased to zero flow during monitor operation, the sliding orifice continues to close until its orifice is in the gas tight position (monitor lock-up) against the BUNA-N monitor valve seat. (See the Internal Monitor Lock-up Pressure table for the outlet pressure required for internal monitor lock-up.)

D. Vent hole V option. On installations where a small volume of over-pressure gas can be safely vented to the atmosphere, the advantages of both the relief valve and monitor safety can be combined. If the flow is decreased to zero or just greater than zero, the vent hole in the internal monitor orifice allows gas to slowly bleed downstream and cause the pressure to rise to the relief point of the internal relief valve. The gas then bleeds to the atmosphere indicating a problem with the regulator.

Vent Lines for Regulators

When constructing vent lines to be attached to regulators installed indoors, follow a few basic rules:

- a. Never use pipe sizes smaller than the vent size; smaller pipe sizes restrict the gas flow. If a long gas run must be used, Itron advises increasing the pipe one nominal size every ten feet to keep the flow restriction as low as possible.
- b. Keep the vent line length as short as possible to minimize the restriction and reduce the vent's tendency to cause regulator pulsation.
- c. Support the vent pipe to eliminate strain on the regulator diaphragm case.
- d. Always point outdoor vent pipes in the downward position to reduce the possibility of rain, snow, sleet, and other moisture entering the pipe. Install a bug screen in the end of the pipe.
- e. Do not locate the vent line terminus near windows, fans, or other ventilation equipment. See the installation instructions furnished with the regulator.
- f. Adhere to all applicable codes and regulations.
- g. If your vent pipe causes regulator pulsation, consult your sales representative or manufacturer.
- h. Itron strongly recommends running a separate vent line for each regulator. Headers with various installed devices can cause regulator malfunction.

Caution Ensure the end of the vent line is away from ANY potential ignition sources. It is the installer's responsibility to ensure the vent line is exhausting to a safe environment.

Installation

Warning Itron does not endorse or warrant the completeness or accuracy of any third party regulator installation procedures or practices, unless otherwise provided in writing by Itron. Follow your company's standard operating procedures regarding the use of personal protection equipment (PPE). Adhere to guidelines issued by your company in addition to those given in this document when installing regulators.

- a. Remove all shipping plugs from the regulator inlet, outlet, and vent before installation.
- b. Verify the piping interior and regulator inlet and outlet are clean and free of dirt, pipe dope, and other debris. Dirt and other foreign materials entering the regulator can cause a loss of pressure control.
- c. Apply pipe joint sealant to the male pipe threads. Do not use pipe joint material on the regulator's female threads. Joint sealant could become lodged in the regulator and cause a loss of pressure control.
- d. Gas must flow through the regulator's valve body in the direction cast on the regulator body. Gas flowing in the wrong direction can overpressure and cause damage to the regulator.
- e. The pilot diaphragm casing can be mounted in any position relative to the body through a full 360° angle at 90° increments.
- f. When the regulator is installed OUTDOORS, the vent must always be positioned so that rain, snow, moisture or foreign particles cannot enter the vent opening. Itron recommends positioning the vent downward to avoid entry of water or other matter which could interfere with the proper operation of the regulator. The vent should be located away from building eaves, window openings, building air intakes and above the expected snow level at the site. The vent opening should be inspected periodically to insure it does not become blocked by foreign material as outlined in DOT PHMSA-RSPA-2004-19856.
- g. When the regulator is installed INDOORS, the vent must be piped to the outside atmosphere using the shortest length of pipe, the fewest possible pipe elbows, and a pipe diameter as large as the vent size or larger. USING VENT PIPE SMALLER THAN THE VENT CONNECTION LIMITS THE REGULATOR'S INTERNAL RELIEF VALVE CAPACITY. The outlet end of the pipe must be protected from moisture and the entrance of foreign particles. The regulator should be specified by the user with the size vent and pipe threads desired to make the vent pipe connection.

Start-up Procedure

- a. Mount a pressure gauge downstream of the regulator to monitor the downstream pressure.
- b. With the downstream pressure valve closed, slowly open the inlet valve. The outlet pressure should rise to slightly more than the set-point. Verify there are no leaks and all connections are tight.
- c. The regulator was pre-set at the factory to match order specifications. If necessary, adjust the outlet pressure by removing the seal cap on the top of the spring housing and adjusting the ferrule or screw inside the spring housing using a large flat-head screwdriver. With a small amount of gas flowing through the regulator, rotate the pilot ferrule clockwise to raise the outlet pressure or counter-clockwise to lower the outlet pressure.
- d. Replace the seal cap and check for leaks after the desired outlet pressure is achieved.

The regulator is ready for operation.

Safety Warning

This product, as of the date of manufacture, is designed and tested to conform to all governmental and industry safety standards as they may apply to the manufacturer. The purchaser/user of this product must comply with all fire control, building codes, and other safety regulations governing the application, installation, operation, and general use of this regulator to avoid leaking gas hazards resulting from improper installation, startup or use of this product.

Itron strongly recommends installation by a qualified professional and periodic inspection of pressure regulators (inspections may be required by local applicable codes or regulations).

Inspections should include checking for gas quality, cycle numbers, external environmental changes, and operating conditions that impact wear on the regulator's moving parts. To ensure safe and efficient operation of this product, replace worn or damaged parts found during inspection.

Limited Warranty

Itron, Inc. 970 Highway 127 North, Owenton, Kentucky 40359-9302, warrants this gas product against defects in materials and workmanship for the earlier of one (1) year from the date the product is shipped by Itron or a period of one year from the date the product is installed by Itron at the original purchaser's site. During such one-year period, provided that the original purchaser continues to own the product, Itron will, at its sole option, repair any defects, replace the product or repay the purchase price.

- > This warranty will be void if the purchaser fails to observe the procedures for installation, operation or service of the product as set forth in the Operating Manual and Specifications for the product or if the defect is caused by tampering, physical abuse or misuse of the product.
- > ITRON SPECIFICALLY DISCLAIMS ALL IMPLIED WARRANTIES INCLUDING THOSE OF MERCHANTABILITY OR OF FITNESS FOR A PARTICULAR PURPOSE. UNDER NO CIRCUMSTANCES WILL ITRON BE LIABLE FOR INCIDENTAL OR CONSEQUENTIAL DAMAGES OF ANY KIND WHATSOEVER.
- Itron's liability for any claim of any kind, including negligence and breach of warranty for the sale and use of any product covered by or furnished, shall in no case exceed the price allocable to the product or part thereof which gives rise to the claim.

In the event of a malfunction of the product, consult your Itron Service Representative or Itron Inc., 970 Highway 127 North, Owenton, Kentucky 40359-9302. See Itron Terms and Conditions of Sale for the full and complete terms of the Limited Warranty.

Ordering Information

- Specify: 1. Inlet and Outlet Connection Size and Type
- 2. Model Number
- 3. Outlet pressure desired
- 4. Pilot needed
- 5. Inlet pressure range
- 6. Type of gas and maximum capacity required
- 7. Assembly position number (see chart below)
- 8. Special requirements such as tagging, 1/8" pipe plug tap, seal wire, etc.

About Itron Inc.

Itron Inc. is a leading technology provider to the global energy and water industries. Our company is the world's leading provider of metering, data collection and utility software solutions, with nearly 8,000 utilities worldwide relying on our technology to optimize the delivery and use of energy and water. Our products include electricity, gas and water meters, data collection and communication systems, including automated meter reading (AMR) and advanced metering infrastructure (AMI); meter data management and related software applications; as well as project management, installation, and consulting services.
