

# Dynamic Tape

Dynamic Taping™ is a novel approach that uses a specially designed, highly elastic tape to contribute energy into the kinetic chain. Developed by a Musculoskeletal Physiotherapist, it is not designed to limit range like rigid tapes but rather to permit full range whilst still providing strong support where needed. The unique properties and four way stretch permit taping in a way not previously possible with rigid tapes, non wovens or Kinesio Tapes. The result is a tape that can contribute elastic potential energy to assist or resist, facilitate or inhibit and offload or deload soft tissues in addition to the normal proprioceptive, neurophysiological and circulatory effects of conventional tapes. The tape is extremely soft to touch and highly conformable. The adhesive has been independently tested and rated as non irritating, non sensitizing and non toxic. It is also applied in thin strips to enhance the skins ability to breathe.

The material is breathable and allows water through to the skin but can be patted dry in seconds. All this combines to produce a well tolerated, long lasting tape that is quite possibly the most comfortable athletic tape on the market.

- 5cm width with beige or black tattoo design
- Also available in 7.5cm width

Code: DYNA5CMTT

RRP EACH **\$30.00**

BOX OF 6 **\$140.00**
