GREEN TIP

Consider the benefits of green cleaning products relative to indoor air quality. The U.S. Department of Interior notes that improving the indoor air quality of schools improves school performance, increases attendance, and lowers the incidence of asthma. Similar results should be expected by improving the indoor air quality of any space.

Selecting Your Fragrance

An important key to fragrancing is selecting the perfect scent for your area. Here are some tips from the professionals:

- Fruity scents counteract strong odors and provide fruity fragrance that is great for areas such as restrooms.
- Fresh scents give an impression of cleanliness. These fragrances are great for rooms such as laundry areas, lobbies and general traffic areas.
- Floral scents are great all-purpose fragrances, providing a fresh cut flower neutral scent perfect for any area.

GREEN TIP

Going green is more than a trend. It is the new way that corporations are thinking about their energy usage and how to save money, such as installing solar power systems and implementing measures to reduce energy and water consumption. It isn't just environmental ethics driving the movement. Green choices—like saving water and electricity—make good economic sense. Your company can benefit also, by finding ways to reduce energy consumption and take advantage of the cost savings. Since savings accumulate over time, the sooner you begin to implement a green program, the greater the benefits will be.

SPACE SAVER

Let the fragrance of your restroom enhance your facility, not detract from it. Daily restroom cleaning with disinfectants and the application of an odor counteractant will eliminate many odor problems. For restrooms that continue to have odor troubles, heavy-duty cleaning of grout, walls and ceilings using a neutralizer, applying disinfectants and enzymes, as well as using a combination of odor control devices might be required to get to the root of the problem.

Labor and product costs are appropriate when the right processes and solutions are used for the task. Deep scrubbing and disinfecting take time and specific chemicals, and are mandated in spaces including hospital patient rooms, restrooms and areas used for food preparation and packaging. Even in a hospital or food processing facility, private offices, break rooms and entryways require a less stringent cleaning standard. Low-risk areas such as retail spaces necessitate simply a clean appearance.

GREEN TIP

Water is a precious resource. In many parts of the world, including large parts of North America, it is also scarce and expensive. Improving conservation and good landscaping methods can reduce your reliance on water. Switching to ultra low-flush toilets, using flow-restrictive devices on sink taps, low-flow showerheads and other water conserving fixtures can help. If you are watering your landscaping, use micro-irrigation to supply water in non-turf areas and upgrade to state-of-the-art irrigation controllers and self-closing nozzles on hoses.
