

## WHAT IS PRP?

Platelet Rich Plasma (PRP) is made from a small sample of your own blood. The process concentrates the platelets found in the blood sample. These concentrated platelets contain huge reservoirs of growth factors. Growth factors are natural components of your body. Clinical data has shown that growth factors may enhance and accelerate your body's normal healing process. Harvest PRP delivers a concentration of platelets and growth factors that is roughly 4-6 times greater than that found in whole blood. This concentration level is the best concentration to stimulate hair growth and younger looking skin.
