

Cornell's non-clog pumps excel not only in sewage but also in waste process applications requiring high pressures or high flows. Designed specifically to handle abrasive solids, stringy materials with a variety of impellers available to suit the application. The Cycloseal® system requires no flushing, is immune to air entrainment problems, is highly resistant to abrasives and is therefore ideal for remote locations.

FEATURES / BENEFITS

- Compact, space saving
- Energy efficient
- High efficiency immersible motors available
- Materials to resist wear and corrosion
- Mechanical seals meet all application
- Heavy duty, low maintenance
