

Welcome to Rasch PRESENTER

What you have here is a sales advice tool which is suitable for both a PC with mouse and for a touch-screen monitor with fingertip controls.

We have deliberately reduced the controls and the designed user interface and kept it simple in order to make using it quick and intuitive. This ensures that nothing detracts from your sales talk with the customer.

We hope you enjoy producing fantastic, successful room designs.

You will need the following as minimum hardware requirements on your computer:

- Intel or AMD processor with at least 1 GHz
- 512 MB RAM
- Windows 98, 2000, XP or higher

Ideally, the software should be run on a screen resolution of 1024 x 768 pixels.

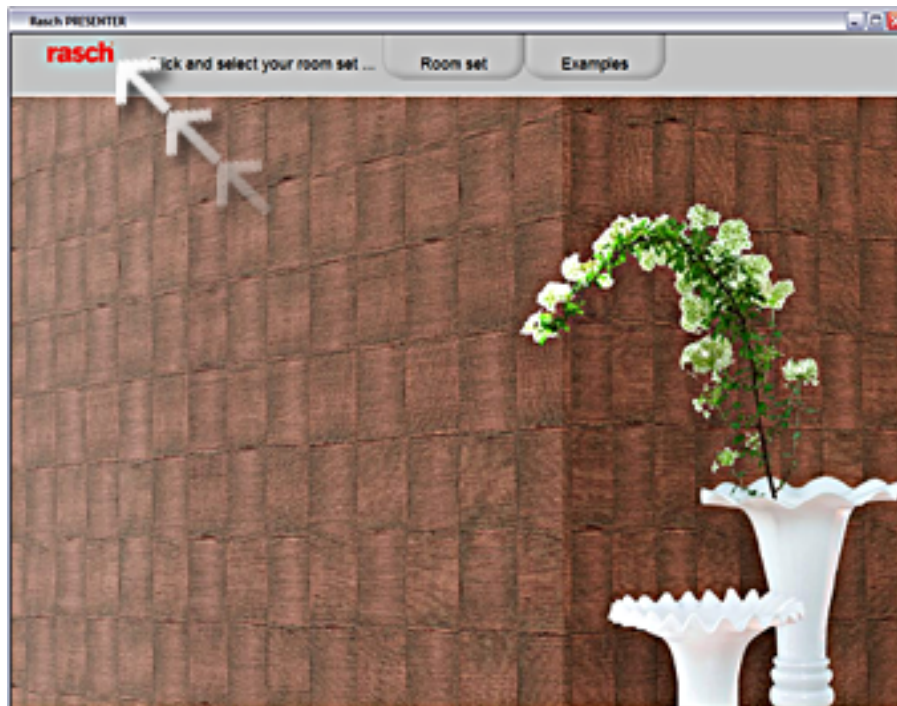

Load the Rasch PRESENTER CD-ROM into the CD drive on your computer.
Select the drive on your computer into which you have loaded the CD.

1. Double-click on the file "INSTALL.exe" to open it.
2. You are now asked whether you are working with a touch-screen monitor or not. If so, please select this option.

The program is now installed onto your hard drive. You will need at least 250 MB of free disk space. If you want to start directly from the CD without installing the software, click on one of the language-specific START programs in the root directory of the CD-ROM.

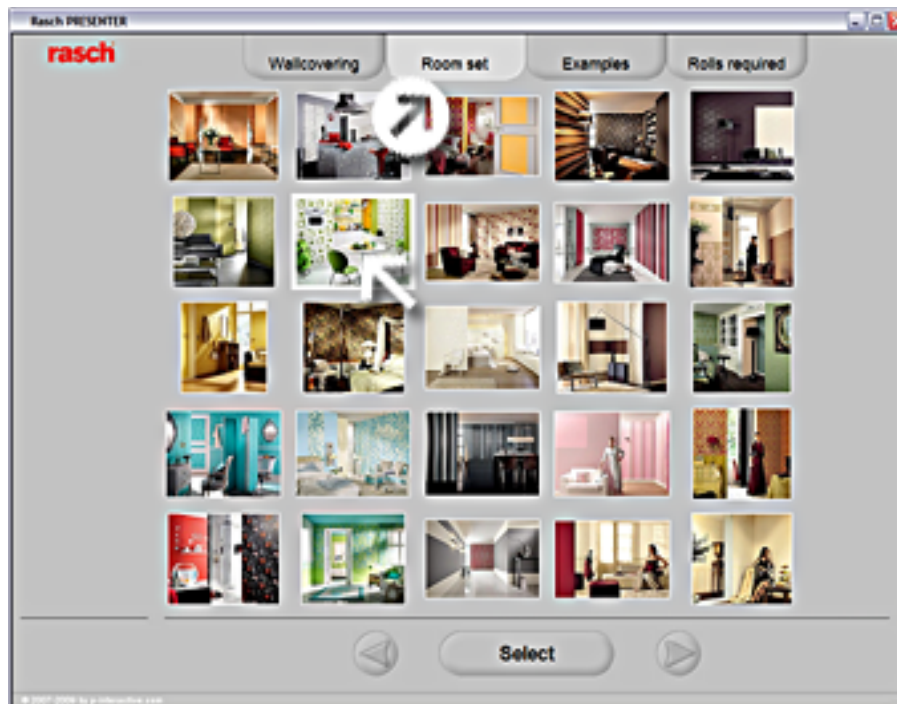

After starting and installing, you are asked whether you wish to open the program straight away. Select Yes. If you wish to work with the programme later, you will find a red "r" icon on your desktop which you can click on to start it.

3. Start:

Arrow: clicking on or pressing the RASCH logo switches between different languages. This will also take you back to the start screen where you can change the language. The red cross in the top right-hand corner closes the program, or alternatively you can press the [Esc] button on your keyboard.

4. Room sets:

You can select a photo or a wall covering design in two different ways:

- a) by double-clicking on a picture or pressing it with your finger, or
- b) simply by clicking/pressing the picture and then the "Select" button.

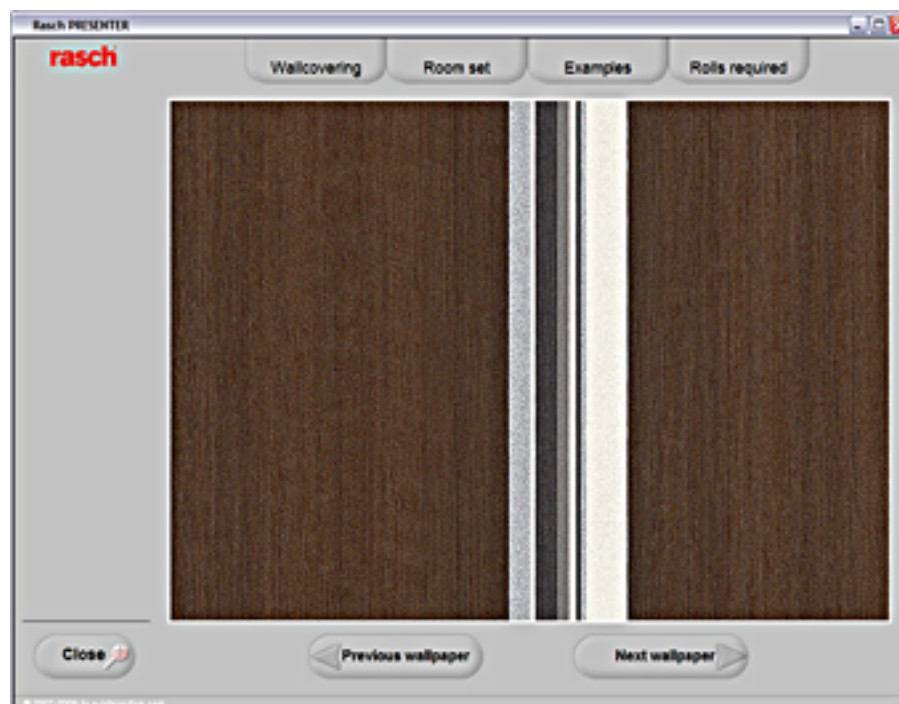

Just try all the buttons, nothing can go wrong. This will quickly give you a good impression of how simple PRESENTER is to operate without having to read lengthy instructions here. If you are not sure how to proceed, simply exit the program and start again, or click on the RASCH logo.

5. Wall coverings

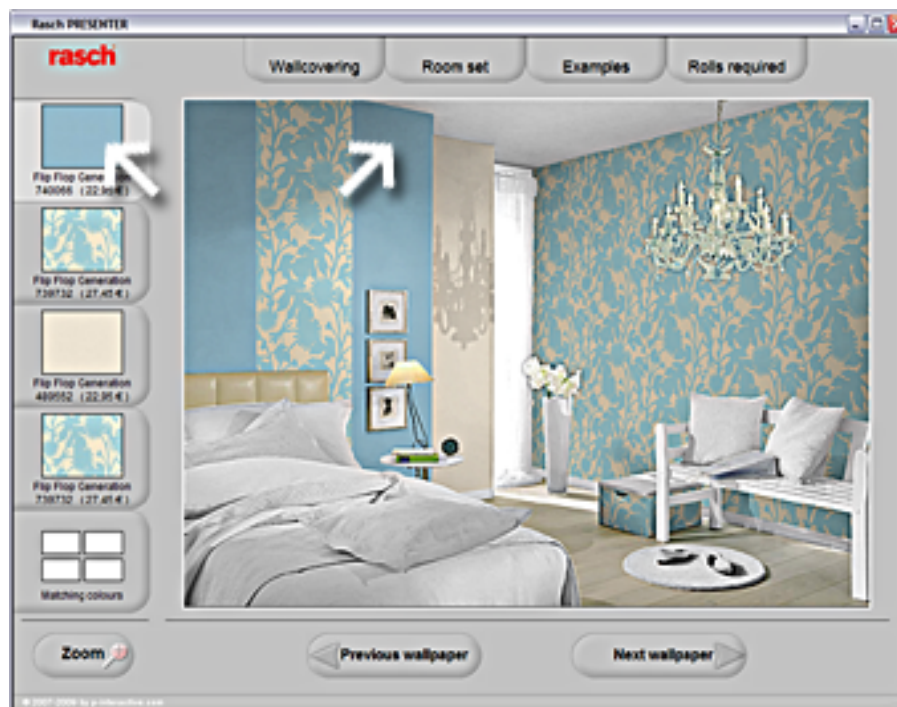

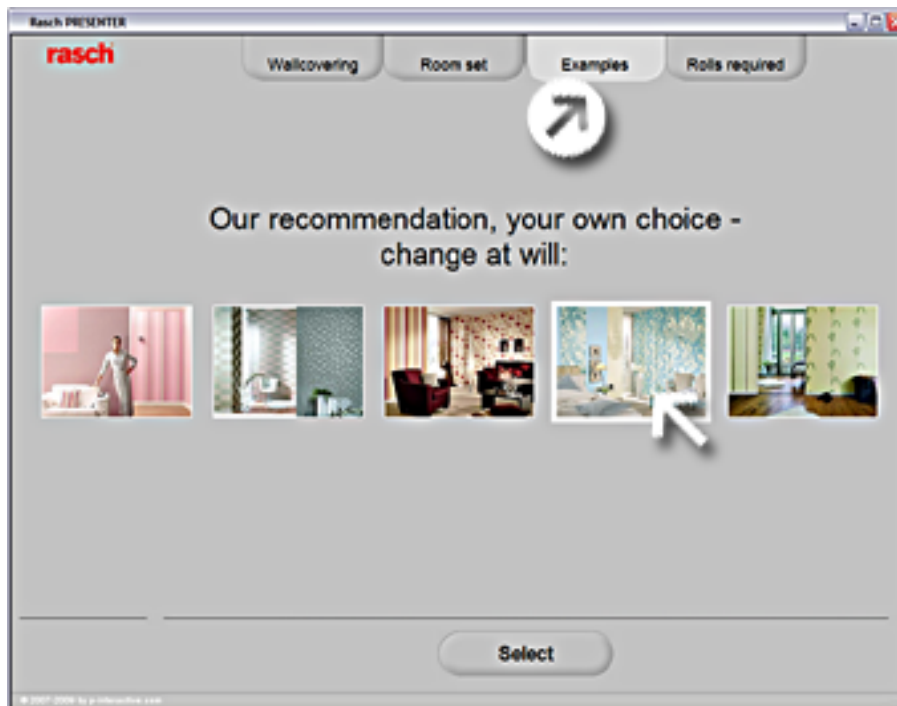

Here, too, the best way is to try it out. The function of all the buttons is the same as described above.

The "Zoom" button in the bottom left-hand corner shows a larger view of the selected design.

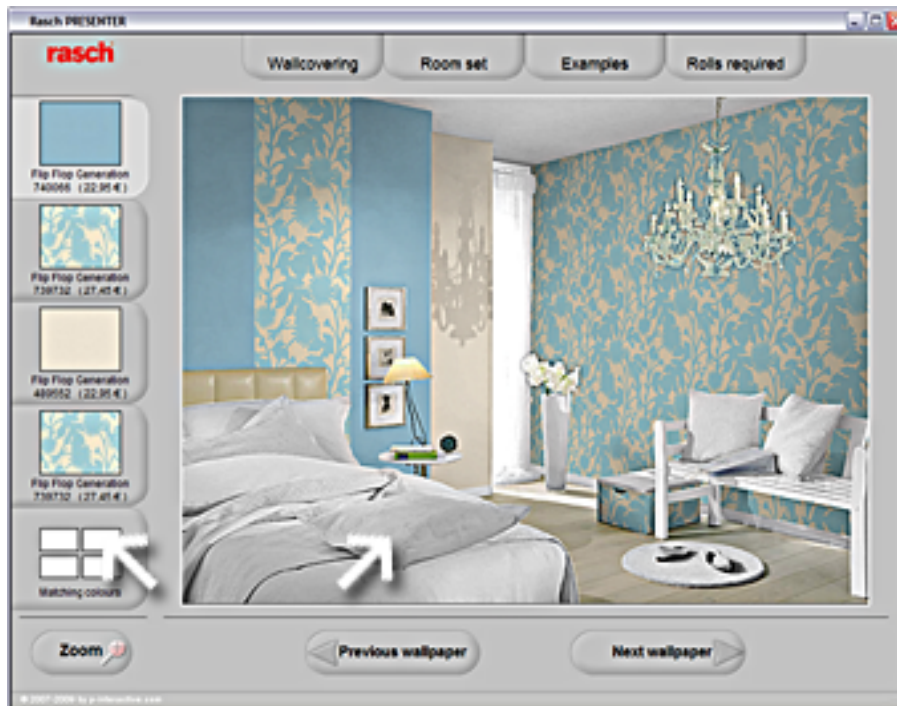

6. Examples: we have set up five rooms with wall coverings for you. Let the inspiration flow.

You can put different wall covering on the individual walls at any time using the buttons on the left. Clicking or pressing the wall in the photo directly also takes you back to the wall covering collections. There you can select a new design.

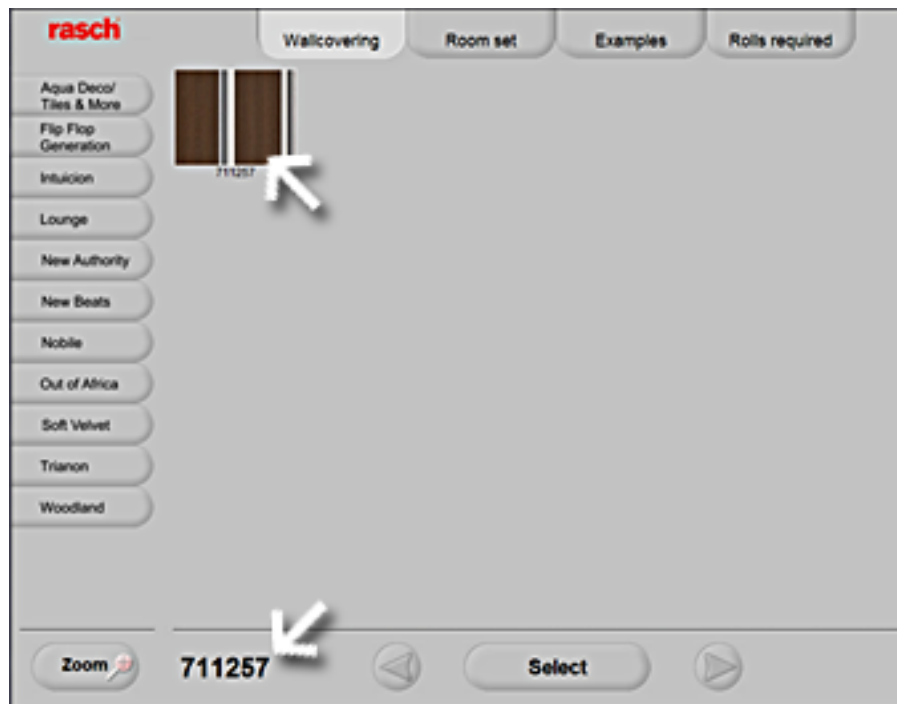

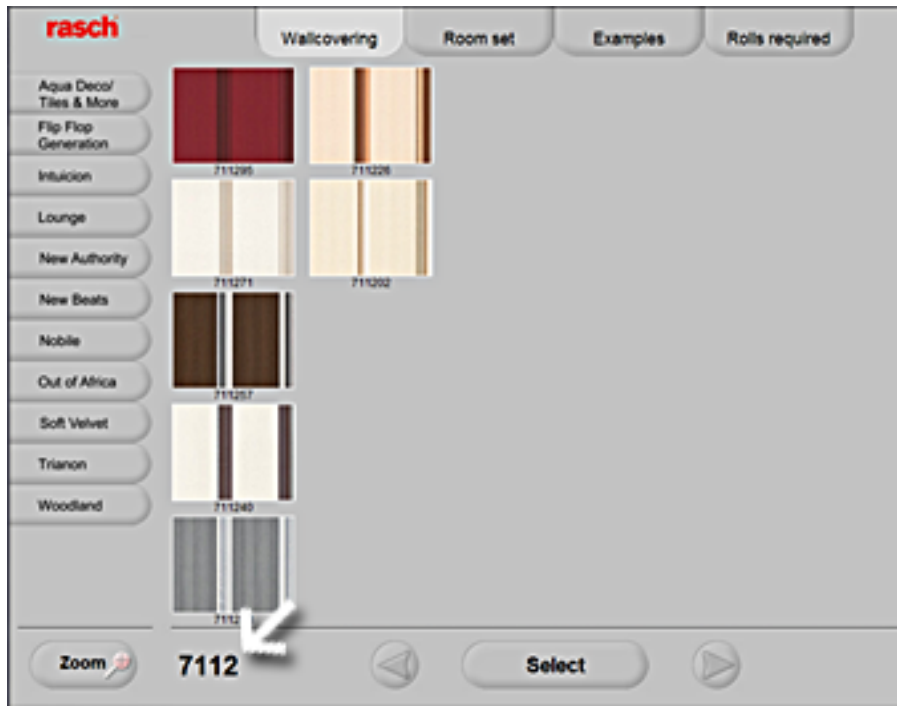

If you click on the "Colour" button at the bottom left several times, you can select different accessory colours in the photo based on the wall covering you have already chosen. You can achieve the same effect by clicking a number of times on any grey elements in the picture.

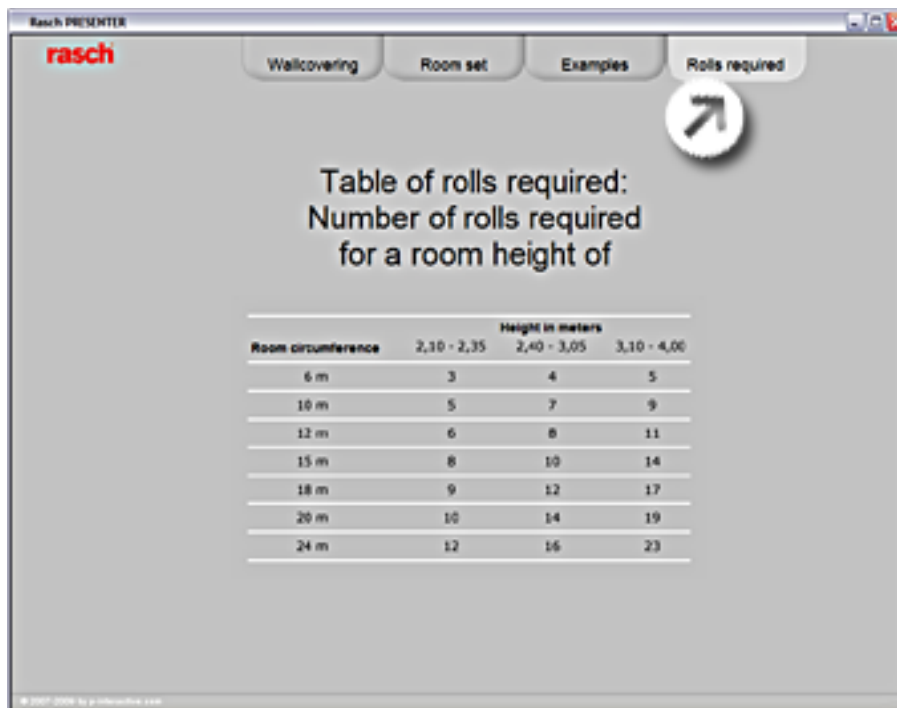

7. Print: clicking on the printer icon generates a PDF file of the current selection, which you can then print or save. Please note that you need PDF display software (e.g. Adobe Reader) installed for this.

8. Product search: if you want to search for a specific wall covering by its product number, use the keyboard to enter the number (not possible with touch-screens). The design you want is then displayed and you can base your design on it.

9. Rolls required: this gives you an overview of the number of rolls of wall covering required at a glance.

**Table of rolls required:
Number of rolls required
for a room height of**

Room circumference	Height in meters		
	2,10 - 2,35	2,40 - 3,05	3,10 - 4,00
6 m	3	4	5
10 m	5	7	9
12 m	6	8	11
15 m	8	10	14
18 m	9	12	17
20 m	10	14	19
24 m	12	16	23
