CERTIFIED INSTALLER

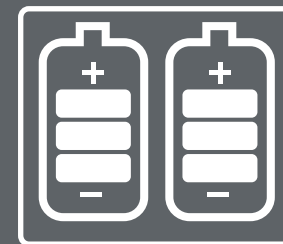

Keep the lights on during the next power outage!

Standard grid-tied solar systems automatically shut down during a utility power outage. We offer several battery packages that can continue to provide power during grid interruptions.

With over 10 years of backup power experience, SunPower by EmPower Solar works directly with our clients to assess energy needs and provide battery solutions that range from powering “critical loads” including standard appliances and a few lights to comfort-level appliances in multiple rooms.

Shown is baseline pricing for Nassau and Suffolk Counties. Final pricing will vary based on equipment configuration, conduit runs, special load requirements, and other key factors determined upon site review. Sunverge systems are only available in NYC through SunPower lease. Custom load analysis and non-standard packages are available.

*Federal Income Tax Credit on renewable energy systems that utilize solar photovoltaics. Please consult your tax advisor on your particular eligibility for this credit.
