NOLEGGIO & VENDITA
MACCHINE ED ATTREZZATURE

Why using Almac's machine

- They have a smaller weight and very smaller ground pressure compared to diesel scissor lift for external use (the weight is widespread all along the crawler and not in four point like wheels scissor)
- Opportunity to work in ALL uneven and rough terrain (snow, sand, unprepared terrain in construction/ building, etc - working like excavators or big rough terrain machinery) or ANY kind of slopes (until 20° longitudinal/ 15° lateral)
- Opportunity to work in all narrow or difficult access (the width of our units goes from 0.8 m to maximum 1.3/1.5 for the bi-levelling machines !)
- Unlimited opportunity or application with just a single machine!
