SMILE PROVOKING FUN FACTS

- The small intestine is bigger than the large intestine.
- If you eat three large carrots a day for several weeks, the increased beta-carotene in your blood could turn your skin orange.
- Valentine candy hearts were originally medical lozenges.

A WORD FROM DR. STEWART

What Is a Crown and Why Is It Needed?

Many of you have had the opportunity to experience what a crown is. It is almost a rite of passage for those who have had large fillings in their past. What a crown is is basically a hat that is custom fit to your tooth. It is a strong covering that restores the original strength to your tooth that may have been compromised by an older larger filling, grinding, wear and tear or trauma.

Crowns were originally made out of gold or metal but now are made with structural porcelain that looks just like a healthy virgin tooth. I have one on my front tooth which was replaced in dental school and it still looks good and is holding up now for over 33 years!

So for those who had questions I hope this helped and for those who need one, this month they are \$200 off to boot!

In Health,
Dr. Stewart

National Children's Dental Health Month

February is National Children's Dental Health Month. It's a great time to remind your kids to brush their teeth twice a day, making sure they clean between their teeth! Just like any other day of the month... help them to make healthy food and beverage choices, not just for their dental health but for their overall health as well. And of course this goes without saying (but we will), make sure everyone is up to date on their dental visits!
