

AVISTA[®]

INTEGRAL COLOUR

Designed to bring
surfaces to life

CREATE A STYLISH AND DURABLE COLOURED CONCRETE SURFACE FOR YOUR PROJECT

What is Integral Colour

Avista Integral Colour consists of a blend of synthetic iron oxide, titanium dioxide and chrome green oxide pigments. These pigments are ultra fine particles which are a fraction of the size of cement particles. They are UV and alkali resistant, lightfast and disperse easily in the concrete.

The oxides are mixed with the concrete to create full depth coloured concrete as the concrete is coloured all the way through the slab. Your selected colour oxide is added to the concrete truck and then thoroughly mixed in the truck prior to the pour. Avista Integral Colour concrete is a practical and durable option which allows you to complement the existing colours around your home or project.

Types of finishes

Your coloured concrete can be finished in a variety of methods to create the look you want. Some of the popular finishes include Broomed, Coved, Exposed Aggregate, Stamped and Steel Trowelled.

BROOMED

COVED

EXPOSED AGGREGATE

STAMPED

STEEL TROWELLED

Colour variation

The colours samples in this chart have been produced as accurately as possible and are based on the oxide being added to grey concrete and the surface being sealed. However, if off white concrete is used instead, the colour will vary from the samples shown. The type of finish used can also affect the look of colour. The smoother the surface the more reflective the surface will be and the lighter the colour will look. The more textured the surface, the more the colour will change depending on the viewing angle.

TEXTURED

SMOOTH

Sealing coloured concrete surfaces

Ensure your new coloured concrete surface is coated with an Avista Concrete Sealer which will help produce an attractive surface that is easier to clean and maintain. The sealer works by blocking the pores of the concrete and providing a protective layer that helps stop dirt becoming ingrained and reduces colour fading. However, sealers will wear over time and so to keep your concrete surfaces looking great, they should be resealed every 2 years. Please note that sealers should not be used on smooth concrete surfaces as it may cause the surface to become slippery, particularly when wet.

Colour Dose

Colour dose based on addition to
25-32 MPa grey concrete

- ▲ (1) 1 x 10 kg bag per cubic metre
- ▲ (2) 2 x 10 kg bag per cubic metre
- ▲ * SLATE = 1 x 9 kg bag per cubic metre

DUSKY GRAPE (1)

COPPER (1)

The colours depicted in this brochure are based on the oxide being added to grey concrete and the surface being sealed. They are intended as a guide only. As the ingredients within the products are derived from natural sources, colours may vary from batch to batch. Variations in colour and shading may also occur depending on the job conditions, chosen texture and finishing practices employed by your concrete contractor. For projects where the colour is critical, it is recommended that you obtain a concrete sample from your concrete supplier or contractor.

▲ Remember that colours under direct sunlight will always appear lighter. Don't be afraid to choose darker tones.
