

FEATURES OF THE

HALO FOOTRING

The shape of support for low-to-high stools.

The revolutionary, upgraded Halo Footring found on BodyBilt's Sola Workstool provides the user with custom adjustability for support at the perfect height.

The Halo easily adjusts for sitting at desk and counter heights, as well as for various leg lengths. The latest updates to the hub make this functionality even easier to use and lock in place. Combined with its many design features, this flexibility means more comfort and better ergonomic support.

FIRST-CLASS FUNCTIONALITY

- Height-adjustable with TaperLock™ Adjustment Hub
- Scalloped indentation for additional comfort
- Larger, sturdier base
- Textured surface with raised grooves for better traction and grip
- Cleanroom capable to Class 100

HEAVENLY HEIGHT ADJUSTMENT IMPROVED

The Halo Footring has been newly updated to make it even easier to adjust the footring height - and lock it securely into position. The Halo's TaperLock™ Technology makes going from desk to stool height on the Sola Workstool simple and easy. Simply twist to unlock, position to the height that you need, then twist to lock back in place.

HALO FOOTRING

EXTRA WIDE 26" DIAMETER

The extra width removes any need for costly footring extensions. The larger size allows for a preferred "open-angle" leg positioning rather than tucked under as with smaller footrings - which can potentially restrict blood circulation.

17" SCALLOPED INDENTATION

This unique feature gives the user an option to have no footring interference at lower seat heights (such as desk level), but to take full advantage of the footring while at taller heights (such as lab counter heights).

TAPERLOCK™ HUB ASSEMBLY

A patented new design is employed with the TaperLock™ Hub, which makes height adjustments quick and easy. A simple twist unlocks the hub and once it is repositioned, another twist locks the hub firmly in place. This is unlike any other footring in the market.

TEXTURED & CHANNELED SURFACES

Specially textured surfaces provide for non-skid, solid footing with a superior grip - while remaining aesthetically pleasing.

HONEYCOMBED UNDERSUPPORT

This is similar to the underside of our Marquis Base, and has proven to be a very strong and durable structural element.

27" MARQUIS BASE

The Halo Footring is designed to work with our 27" Marquis Base. The footring spokes align perfectly with the base spokes. The base will never tip, even when standing fully upright on the footring.

AMERICAN-MADE PRODUCT

Buying American-made products keeps our economy thriving, and means you are opting for better quality, safety, and labor requirements.
