

Information from HyLyte on:

Benefits of Numbering Systems

- Highly Visible
- Cost Effective
- Quick to Install
- Easily Modifiable Numbers
- Council Personalised
- Long Durable Life Expectancy
- A Great Benefit to the Emergency Services
- Comply with Australian and New Zealand standards AS/NZS 4724:2000

Rural Property Identification was a HyLyte first and was developed for the specific benefit of the Emergency Services. The Property numbering system, in full support of the Emergency Services and City Councils, facilitates quick response times and the precise location of an emergency.

For Visibility, we recommend that the numbers be 95mm high and be in a yellow or white Retro-Reflective Class 1 material. For each Regional Council, we can also offer a personalised Council Logo at an extra cost to be incorporated into the Numbering System.

The Numbers represent 10's of meters from the start of the road, i.e: 642 = 6420m, 6 km, 420m from the start of the road.

The unique HyLyte Triangulation Design has been recognised as being 100% correct in improving the visibility of the Retro-Reflective materials, as the vehicle's lights hit the triangular module at the right angle resulting in improved visibility.

The lack of, or poor house numbing can cost lives.

Work Place Health & Safety Signs - Hi Vis Gear - Speed Humps - Bollards - Traffic and Safety Mirrors - Wheel Stops
Traffic Control Equipment - Fall Arrest Gear - and heaps more!
