Backup & Disaster *Recovery*

Most people consider a "disaster" to be a calamitous event that occurs suddenly and causes great loss of life, damage or hardship. But within the world of IT, a disaster is any unexpected event that causes a substantial loss of service levels in critical business systems for an unacceptable period of time.

Disasters are unpredictable. Disaster recovery shouldn't be. Ensure your organization has a framework in place ensuring data recovery is planned, predictable and controlled. Being without your network can result in lost productivity, missed deadlines, and unrecoverable profits.

Our backup and disaster recovery solutions allows you to back up and quickly recover systems, apps and data anywhere, whether it's physical, virtual or in the cloud. Grab a missing file, restore an entire data volume, or restore a failed server's system to a new physical or virtual machine with no headaches.

We strive to deliver technology that eliminates the need to choose between efficiency and effectiveness, which means you and your organization can spend less time on IT administration and more time on business innovation.

When you consider the stakes involved, it's clear that, despite not increasing top-line revenue or reducing cost, disaster recovery is absolutely essential to any business.

Our Dependable Solutions:

- Provide Hands-Free and Worry-Free solutions, both on and off-site
- Restore failed servers quickly to provide business continuity
- Replace management-intensive, error-prone tape backup with a hands-free hardware device

Have you ever calculated the actual cost of a disaster to your company?
