

Case Study

Client: Her Majesties Revenue and Customs

Products: Addressable Fire Alarm Systems
May 2017 – August 2017

Systema Fire and Security have successfully designed, installed and commissioned complete fire and security protection package for world renowned restaurant brand.

The task:

A tender process involving multiple site visits to protect government buildings across The United Kingdom, Systema Fire and Security worked closely to ensure every site was inspected prior to our tender.

Being a life critical system, the impact during working hours had to be the minimum possible to avoid false alarms and system downtime.

Our team of in house surveyors and system designers drew up plans from site visits and client drawings.

The technology:

Systema Fire and Security only work with world leading brands. With three out of four systems reaching over 250 devices per site Systema Fire and Security designed the systems to work with Advanced Fire Alarm Systems control panels and Apollo addressable devices.

The outcome:

A total of four sites across The United Kingdom were tasked to Systema Fire and Security to carry out the system upgrades across a tight two-month installation window.

Systema Fire and Security are an NSI Gold ISO:9001 accredited company.
