

Solids

Solids are the concrete elements. Corner elements and curves are available to create closed configurations. Solid backs and arm supports are available according to customer requirements. Recesses provide space for the installation of street furniture such as waste bins, cycle racks or lamp posts. Step elements can be used to create an ascending or descending stairway to areas such as a green space. A spectator stand, staircase or concrete seating arrangement can be created on a quayside, or a continuous path or open area can be laid out in a larger green space using slabs. The Solids range also includes double-sided seating elements with both sides inclined inward to the centre.

Seats

Seats consist of concrete elements incorporating a wooden seat, back and/or arm support, which embellish the seating arrangement. The Seats arm support is extra wide to accommodate a notebook or laptop. The Seats range also includes stand-alone seating elements.

Wooden seats

As standard, the backs, seats and arm supports of the Seats range are supplied in untreated Guariuba (FSC) wood. The wooden slats are secured on a galvanised steel frame by means of anti-theft bolts. The entire frame can be removed for maintenance purposes.
