Cincom L20
Sliding Headstock Type CNC Automatic Lathe
In addition to the versatile modular design, the L20 also focuses on operability and working convenience.

The high level of basic performance found in features like the position adjustable operation panel that makes it possible to monitor the interior of the cutting area while looking at the operation screen; the centralized lubrication system that helps to lessen the maintenance workload; and the coolant tank with a wide opening to facilitate chip clearance, makes the operators’ daily work go more smoothly.

Additionally, material up to Ø25 mm can also be supplied as an option. This expands the range of machinable workpieces beyond what was possible with the previous L20. You can also select options such as a workpiece conveyor, chip conveyor, medium pressure coolant devices, LFV cutting function and more.

A machine synonymous with the history of Cincom has been designed for the new age with 3 models in a modular design.

Ranging from a 5-axis machine with excellent cost performance to a high-end machine equipped with B axis and a back spindle Y axis, you can select the machine according to the functions you require.

This concept offers unrivalled versatility – two types of gang tool post, five types of opposite tool post and three types of back tool post are available to be specified according to the functions required.
Stable, powerful & productive with versatile modular design

With the current shift in the manufacturing industry, the requirement is for variable-lot machining of a wide range of workpieces. In order to meet this requirement, Citizen has introduced Modular Design. We allow the selection of functions corresponding to a diverse range of machining needs, and help customers optimize their manufacturing by combining these functions to achieve their ideal machine configuration.

Rotary tools on the gang tool post
9,000 rpm (Max)

B-axis rotary tools *Type XII
12,000 rpm (Max)
Motor: 2.2 kW

Opposite tool post rotary tools *Option for Type X, XII
7,500 rpm (Max)
6,000 rpm (rating)
Motor: 0.75 kW

Back spindle
10,000 rpm (Max)
Motor: 0.75 / 2.2 kW

Rotary tools on the back tool post
7,500 rpm (Max)
6,000 rpm (rating)
Motor: 0.75 kW

Ø20mm max. bar as standard; Ø25mm as option
Supply of bar stock up to Ø25mm is supported as an option. The machining length per chucking is 200mm (Ø20mm) and 188mm (Ø25mm).
Note: The optional long workpiece unit supports workpieces up to Ø20mm.

Ability to use with or without a guide bushing
Guide bushing or non-guide bushing type can be selected as appropriate when machining long, thin workpieces, when using cold drawn material, and in order to leave short remnant bars.

Front spindle
10,000 rpm
Motor: 2.2 / 3.7 kW
Max. machining length: 200 mm/1 chucking (GB)

L20 Type VIII example tooling
L20 Type XII example tooling

Guide bushing type

Non-guide bushing type
Ease-of-use makes the operator’s work go smoothly

Many features with a high level of basic performance bring convenience to manufacturing.

A. Product receiver box

B. Coolant nozzle

C. Chip receiver box

A. The workpiece gripped in the back spindle is unloaded into the product chute for collection.
B. Coolant can be supplied from various directions depending on the machining circumstances.
C. With its large opening, the chip collection port is designed for easy cleaning.
D. Supplying lubricating oil to all ball screws with this device eliminates the need for manual greasing.
E. This option is very easy to use; the conveying route can be opened up in a one-touch operation.

D. Central lubrication device

E. Workpiece conveyor

LFV Function (Optional)

LFV (Low Frequency Vibration) cutting is a technology for performing machining while vibrating the S and Z servo axes in the cutting direction in synchrony with the rotation of the spindle. It reduces various problems caused by chips entangling with the product or tool, and is effective for small-diameter deep hole machining as well as the machining of difficult-to-cut materials.

Note 1. On the L20X & XII models, LFV machining cannot be performed on the back (Z2) side.
Note 2. LFV machining cannot be performed with the Y axis.
Note 3. LFV machining can be performed simultaneously on a maximum of one pair of axes.
Note 4. Simultaneous LFV machining on the Z1 axis on the front side and Z2 axis on the back side is not possible on the VIII model.
Note 5. For LFV machining with rotary tools, the “LFV function” and “rotary tool feed per revolution” options are required.

Representation of the cutting

Comparison of chips

Material SUS304 Weight: 14.3 g (same scale)
Selectable modules to improve your productivity & profitability

Function modules that can be combined without restrictions

**Rotary tools on the gang tool post**

- **U36B** (Type VIII, X): 4 rotary tools + 3 single ended spindles manually adjustable from 0° to 90°

**Opposite tool post**

- **U120B** (Type VIII): 3 fixed tools
- **U121B** (Type VIII): 3 fixed tools (for deep hole machining)
- **U125B** (Type X, XII): 6 fixed tools
- **U126B** (Type X, XII): 6 fixed tools (3 for deep hole machining)
- **U128B** (Type X, XII): 3 fixed tools + 3 rotary tools

**Back tool post**

- **U154B** (Type VIII): 4 fixed tools
- **U155B** (Type X, XII): 4 fixed tools + 4 rotary tools
- **U15B** (Type VIII): 4 rotary tools

Features a B axis for rotary tools on the gang tool posts of Type XII machine as standard; it can be set over a 135° range (+90° to -45°).

For the opposite tool post, a tool post that is capable of pinch milling or one that can handle deep hole machining can also be selected as options.

The back tool post on Type X and XII machines can accommodate a total of 8 tools: 4 rotary tools in the upper row and 4 fixed tools in the lower row.
Equipped with high-speed NC
The latest NC model drastically reduces the start-up and screen switching time compared to conventional machines with advanced functions.

On-machine program check function
Using manual handle feed, operations can be run in the forward or reverse directions, and you can temporarily stop program operation, edit the program and then restart the operation.

Display of easily understood illustrations
Illustrations appropriate for each item are displayed. You can see what they mean at a glance (the screen shown above displays the machining data).

Code list display
The function displays the list of G and M codes including explanations to aid programming.

Eco screen
The current power consumption is shown on the screen, along with the cumulative power consumption, and the power regeneration (generation) status.

Eco screen (example graph display)
The machine's power consumption can also be shown in the form of an easy to understand graph.

The next process starts before the current one ends
Cincom Control saves time between processes

Cincom Control
We have developed a new control system unique to Citizen that realizes fast and smooth operation. It reduces idle time and achieves faster rapid feed together with substantial shortening of cycle time.

Multiple tool post overlapping function
Independent opposite and gang tool posts are provided. In front machining, idle time has been completely eliminated by using a unique control method whereby the tool post to be used next starts the preparation for machining without waiting for the other one to complete its retraction operation.

Direct spindle indexing function
This substantially reduces spindle indexing time. When indexing the spindle, this function allows the spindle to be decelerated and stopped at the required index position by specifying this position with a C-axis command while the spindle is rotating. This eliminates the idle time up until rotation stops, and improves working efficiency.

### Environmental Information

#### Energy Usage

- **Power supply voltage**: 200 V AC
- **Electrical power requirement (Max)**: 7.3 kW
- **Required pneumatic pressure**: 0.5 MPa

#### Power Consumption

- **Power consumption in program operation**: 0.0113 kWh/cycle
- **Power consumption value above converted to a CO2 value**: 8.4 kg/cycle
- **Air consumption**: Required air flow rate 21.5 Nm/min (max. 210 Nm/min during air blow)
- **Lubricant consumption**: At power ON 0.0113 kWh/cycle
- **Noise level**: Value measured based on JIS 75.2 dB

#### Approach to Environmental Issues

- **Environmental load reduction**: Covered in the instruction manual
- **Recycling**: Notification of the material names of plastic parts
- **Environmental Management**: We are ISO 14001 certified.

---

*1: This is the standby power in the idle stop mode (a function that turns servomotor excitation off when it is not necessary, for example during program editing).
*2: This is the power consumption in program operation (when not cutting) for one of our standard test pieces, shown for the purpose of comparing the environmental performance with that of existing models.
*3: This is the value converted in accordance with the ONPU Electric Power CO2 emissions coefficient for 2009 as published by the Ministry of the Environment.
*4: If polyvinyl chloride (PVC) and fluoric resin are not processedit correctly they can generate harmful gases. When recycling these materials, commission a contractor that is capable of processing them appropriately.

---

### Standard accessories

- Main spindle chucking unit
- Back spindle chucking unit
- Rotary guide bushing unit
- Gang rotary tool driving unit
- Coolant unit (with level detector)
- Lubricating oil supply unit (with level detector)
- Rear tool post rotary tool unit (type X, XII)

### Optional accessories

- Knock-out jig for through-hole workpiece
- Chip conveyor

---

### Standard NC functions

- Spindle synchronized function (Mitsubishi)
- 8.4 inch color LCD
- USB slot
- Program storage capacity: 160m
- Operating time display function
- Multiple repetitive cycle for turning
- B axis control function *Type XII*
- Interface check function
- Spindle speed changer
- Constant surface speed control function
- Automatic power-off function
- On-machinery program check function
- Chamfering, corner R
- Noise radius compensation
- Eco indication
- Variable lead thread cutting
- Arc threading function
- Geometric functions

### Optional NC functions

- Tool offset pairs: 80
- Optional block skip (9 sets)
- Back machining program skip function
- Program storage capacity 6GB (approx. 240KB)
