Welcome to Sevenbardot at 'Wigelmars'

Welcome once again to our Sevenbardot bull sale. This will be our 42nd on-farm bull sale in 91 years of the one family breeding poll Herefords. We reckon about 3000 bulls have gone out into the cattle breeding world from the 47 sales and many more prior to that. Sue and the boys say that is a huge number of daggy tails washed and photos taken!! We are proud of the influence Sevenbardot has had on beef production in all states and that the bloodlines run through so many stud herds.

Easy to say 'the best lot of bulls presented' but it is true of this year's sale bulls. They went onto green oats early in June following the good start to the year but of course not much rain anywhere since and the oats has basically finished. They have done really well on the oats with a bit of DDG - dried distillers grain used for the first time - high in protein and it has certainly given them a boost.

The bulls have had all the usual 7 in 1, dips, drenches etc and are ready for work. Their weights and figures are very pleasing and we are more than confident they will do a good job for you. We are offering 20 of the oldest yearling bulls – always a bit reluctant to sell young bulls, they really do need considerate management as they are far from mature bulls at this age but they are here for sale and once again I am confident they will perform well.

Good luck with your purchases and we look forward to seeing you back at Sevenbardot for the COMPLETE DISPERSAL of all our stud cattle on Monday, October 9 this year. 400 registered females and 60 yearling bulls. A big succession planning decision, the boys absolutely ready to do their own thing, good cattlemen but none of them really passionate about the stud which is so necessary to do it well – the 'Wigelmars' property is currently for sale, the cattle to be dispersed and semi-retirement for Sue & I, probably back in Queensland.

The Gunn Family

Angus & Trudi Picton.
"Winners are grinner!"

The Experts!
Jim, Alex Makim & Hamish Munro.

SALE DAY

Information

DATE

Friday, 15th September 2017

TIME

Sale commences 1pm.

VENUE

Wigelmarr, 6749 Bylong Valley Way,
Bylong NSW 2849.

INSPECTION

From 10am on sale day or by appointment.

SELLING AGENTS

Landmark Townsend 02 6545 1377
Elders Pastoral 02 6372 3444

AUCTIONEER

Paul Dooley 0428 667 441
0458 662 646

REBATE

5% to all agents introducing client prior to sale.

Auctions Plus

Elite Livestock Auctions

Will both be operating on sale day.

DELIVERY

Free delivery to Wagga, Carcoar, Dubbo, Condobolin, Bourke, Goondiwindi, Tamworth, Scone and Singleton. Drop offs can be arranged at towns on routes travelled to above towns.

Terms & Conditions

As displayed on sale day.

HEALTH

All bulls to all states of Australia except WA.
Johnes We are JBAS 6.
Any tests that are required will be carried by the purchaser.
All bulls are guaranteed fertile and capable of natural service for 6 months from sale date.

INSURANCE

Brokers will be present on the day.

REFRESHMENTS

Morning Tea and lunch will be provided.

Liability

The owners, employees, sale staff and representatives accept no responsibility for accidents that occur. Any persons attending do so at their own risk.

THE EYE CANCER

Myth

In 1958 Wally and Marg Gunn bought Gubbagunya at Goondiwindi. The purchase included 500 hereford cows and calves. This herd was 30% affected with eye cancer. For the next 15 years Wally monitored and recorded the progress he made with this problem.

Step one was to purchase bulls that would help with the eradication. This he did from Merawah using only sons and grandsons of Merawah Revenge.

Observations:

1 The same number of red eyed cows as white cows were culled with cancer.

2 Two popped eyed cows to every one well set eyed cow were culled for cancer.

3 Three types of cancer were found to be present

- (1) Eye ball cancer, which accounted for 80% of the cancer cases. It was found to be very hereditary. Where possible the daughters of eyeball cancer cows were identified and studied. 80% of these daughters were found to have eyeball cancer by the time they were five years old. Red eyes had no effect on this cancer. Hence culling removed the eyeball cancer very quickly.
- (2) Third eye lid cancer accounted for about 15% of the cancer cases. It looked like a piece of broccoli when it grew. The incidence increased when cattle were handled more than normal and when conditions were dusty and flies were thick. It was found by snipping the infected third eyelid off when the cancer was small eliminated it. The cancer/infection never returned once it was snipped. Thus we felt this was a virus spread by flies when the third eyelid was bruised or grazed. Red eyes had no effect on this cancer either. Better handling of the cattle did.
- (3) Eye lid cancer accounted for about 5% of the cancer. Red eyes did have a small effect here with about 70% of the affected cows having white eyes.

At the end of the 15 year study our incidence of eye cancer of any type was 0.01%. The same result was obtained on a five year study of 1500 cows at Mount Riddock at Alice Springs 0.01%. They have been buying bulls from Sevenbardot and Merawah since 1976 (40years). This reinforces for us the heritability side of this perceived problem.

The understanding we drew from all this was that most cancer was hereditary and could be nearly eliminated by strict culling of all eyeball cases and their daughters.

Third eyelid cancer could be reduced by more carefully handling the cattle and by snipping any infected eyelids in the early stages. It never returned after snipping.

Eyelid cancer was fairly insignificant in the scheme of things. Red eyes did have some effect on it. It mostly only came in cows over 5 years old.

This information was given to the Qld D.P.I. but was not acceptable, as a qualified person did not supervise it. Wally's reply was who more qualified than the person paying for the losses caused by the disease.

Our conclusion is that we don't cull white eyes from our herd if the eyes are well set. It has not stopped us from using white eyed bulls if their eyes are well set and they have attributes we are looking for in our herd.

With a heritability of about 4% red eyes are not that important in producing kilograms of beef per animal or per hectare.

Too many great bulls are overlooked because they have even one white eye or don't have big red rings round both eyes. This fad has been hammered for so long because red eyes are easy to see and do make cattle look attractive.

Look at the other attributes in your cattle that are going to make you more money rather than the cosmetics that have very little affect on profit gained at the end of the day, like increased fertility or extra length which gives you more weight and yield.

Just something to get you all thinking and talking and hopefully observing in your own herd what is one of our PERCEIVED problems.

BUYING BULLS

A Different Perspective

BUYING bulls is difficult. It is like playing sport you need to be in form which means you need to practice. Buying bulls once a year doesn't give you that practice you need so the following questions arise -

- How much do I spend?
- Which one do I buy?
- What am I really selecting for?
- What do all these figures mean?
- Who do I go to for help?

Let us work our way through this list.

1 You should be prepared to spend somewhere between 8 and 10 times what your weaners average or 5 to 6 times what your bullocks make if you are to maintain your present herd standard. If you are trying to lift your herd performance you may need to spend a little more or you may get lucky and the bull you pick may come in under budget.

2 When you first arrive at the sale walk through the bulls from the last lot to the first and cross out any bull you don't like. Then go and have a cuppa and think about what you have seen. Then go back through the bulls that you have not crossed off from lot 1 to the end. Select the bulls you like, and make sure you pick at least twice as many as you need. Now go and look at the bulls EBVs and INDEXES and place the bulls in the order you would like and put a price on them that you are comfortable to pay. Now if you need any help go to your adviser and ask. I suggest you ask the owner as you then put him on the spot to help you and no one knows more about these cattle than the owner. If you are going to ask someone else make sure he is someone who breeds cattle.

3 I would hope you would have some idea of what you are trying to achieve with your breeding program. Select the bulls that have strengths in the areas that you have weaknesses in, and where possible have strong EBVs in these areas. For example if you are trying to increase the size of your cow herd pick a bull that is quite a bit bigger than you require and has EBVs above herd average and who has a birth weight figure that is no more than 10% of 600 day growth. You may have to give away a little in an area that you are strong in to get the bull you want but can fix that with your next sire.

4 There are a lot of figures pushed at us today and they are confusing even for those of us who work with them all the time. I suggest if you want a technical answer ask a geneticist or a departmental person. If you want a practical answer ask your seedstock producer or someone you know who has a good herd that you know uses Breedplan as a selection tool. I suggest you select your bulls and then look at the figures and go for the bulls where Breedplan supports your selection. However I would not eliminate a bull that I really liked if his figures were not quite as good as he looks.

5 Where to for help? If you were comfortable with the owner of the bulls then I would start there. If not take someone with you who you are comfortable with and who has a herd of cattle that you wished you owned. He does not necessarily have to have the same breed. And last but not least back your own judgement. However if you are getting advice and feel you need it don't ignore it? Remember it is not use going to the doctor, if you are not going to take the medicine.

I hope this has been of some use to you as it was to me when I was given it some 20 years ago. If you don't know, ask or you will never know.

HEREFORD EBVs

Explained

The EBVs contained within this catalogue can be validly compared with other Hereford GROUP BREEDPLAN EBVs or Hereford INTERIM EBVs in other herds. These EBVs can not be used to compare animals of another breed.

ESTIMATED BREEDING VALUES (EBVs): An animal's breeding value is its genetic merit, half of which will be passed on to its progeny. While we will never know the exact breeding value, for performance traits it is possible to make good estimates. These are called Estimated Breeding Values (EBVs). The EBV is therefore the best estimate of an animal's genetic merit for that trait. EBVs are expressed as the difference between an individual animal's genetics and the genetic base to which the animal is compared.

ACCURACY: An accuracy value is presented with every EBV and gives an indication of the amount of information that has been used in the calculation of that EBV. The higher the accuracy, the lower the likelihood of change in the animal's EBV as more information is analysed for that animal or its relatives.

Although the accuracy of an EBV should be considered, animals should be compared on EBVs regardless of accuracy. Where two animals have the same EBV however, the animal with the higher accuracy would normally be used more heavily than the bull with the lower accuracy because the results can be predicted with more confidence.

CALVING EASE:

Calving Ease EBVs are based on calving difficulty scores, birth weights and gestation length information. More positive EBVs are favourable and indicate easier calving.

Direct: Direct calving ease indicates how this animal influences the birth of its progeny.

Daughters: Calving Ease - Daughter's indicates how well the animal produces daughters that have easier calving.

BIRTH

Gestation Length: The GL EBV (days) is based on AI records. Lower (negative) GL EBVs indicate shorter gestation length and generally easier calving.

Birth Weight: The Birth Weight EBV (kg) is based on the measured birth weight of animals, adjusted for dam age. The lower the value the lighter the calf at birth and the lower the likelihood of a difficult birth. This is particularly important when selecting sires for use over heifers.

FERTILITY

Scrotal Size: The SS EBV (cm) is an indicator of male fertility in regards to semen quality and quantity. Higher (positive) EBVs indicate higher fertility. SS is also positively associated with female fertility.

Days to Calving: The DC EBV (days) is an indicator of female fertility based on the time between a cow's first exposure to a bull and when she subsequently calves. Cows that calve late in the season or fail to calve are penalised. This is more useful as a sire trait. Lower (negative) EBVs

are preferred indicating shorter days to calving for the sire's daughters.

GROWTH

Milk: 200-Day Milk EBV (kg) is an estimate of an animal's milking ability. For sires, this EBV is indicative of their daughter's milking ability as it affects the 200-day weight of their calves.

200-Day Growth: The 200-Day EBV (kg) is calculated from the weight of animals taken between 80 and 300 days of age. Values are adjusted to 200 days and for dam age. This EBV is the best single estimate of an animal's genetic merit for growth to early ages.

400-Day Weight: The 400-Day Weight EBV (kg) is calculated from the weight of progeny taken between 301 and 500 days of age, adjusted to 400 days and for dam age. This EBV is the best single estimate of an animal's genetic merit for yearling weight.

600-Day Weight: The 600-Day Weight EBV (kg) is calculated from the weight of progeny taken between 501 and 900 days of age, adjusted to 600 days and for dam age. This EBV is the best single estimate of an animal's genetic merit for growth beyond yearling age.

Mature Cow Weight: The Mature Cow Weight EBV (kg) is an estimate of the genetic difference in cow weight at 5 years of age. Smaller, or more moderate EBVs are generally more favourable.

CARCASE

Carcase Weight: The Carcase Weight EBV (kg) estimates the genetic difference in carcase weight at a standard age of 650 days.

Eye Muscle Area: The EMA EBV (cm²) estimates genetic differences in eye muscle area at the 12/13th rib site of a 300kg dressed carcase. More positive EBVs indicate better muscling on animals.

Rib Fat: The Rib Fat EBV (mm) estimates the genetic differences in fat depth at the 12/13th rib in a 300kg dressed carcase. More positive EBVs indicate more subcutaneous fat and earlier maturity.

Rump Fat: The Rump Fat EBV (mm) estimates the genetic differences in fat depth at the P8 site of a 300kg dressed carcase. More positive EBVs indicate more subcutaneous fat and earlier maturity.

Retail Beef Yield Percent: The RBY% EBV (%) represents total (boned out) meat yield as a percentage of a 300kg dressed carcase. A more positive EBV indicates higher percentage yield for the 300kg carcase size.

Intramuscular Fat Percent: The IMF% EBV (%) is an estimate of the genetic difference in the percentage of intramuscular fat at the 12/13th rib site in a 300kg carcase. Depending on market targets, larger more positive values are generally more favourable.

\$INDEXES

Explained

SELECTION INDICES

Supermarket: The Supermarket Index estimates the genetic differences between animals in net profitability per cow joined for an example commercial herd targeting the domestic supermarket trade. Steers are either finished on grass or grain (eg 50-70 days). Steers are assumed marketed at 450kg live weight (250kg HSCW and 12 mm P8 fat depth) at 17 months of age. Daughters are retained for breeding. In response to industry feedback regarding eating quality and tenderness, a small premium has been placed on marbling.

Grass Fed Steer: The Grass Fed Steer Index estimates the genetic differences between animals in net profitability per cow joined for an example commercial herd targeting pasture finished steers. Steers are assumed marketed at 600 kg live weight (330 kg HSCW and 8 mm P8 fat depth) at 23 months of age. Daughters are retained for breeding. In response to industry feedback regarding eating quality and tenderness, a small premium has been placed on marbling.

Grain Fed Steer: The Grain Fed Steer Index estimates the genetic differences between animals in net profitability per cow joined for an example commercial herd targeting pasture grown steers with a 125 day feedlot finishing period for the grain fed markets. Steers are assumed marketed at 600 kg live weight (330 kg HSCW and 20 mm P8 fat) at 20 months of age. Daughters are retained for breeding. There is a significant premium if steers reach a marble score of 2 or greater.

EU: The EU Index estimates the genetic differences between animals in net profitability per cow joined for an example commercial herd targeting pasture finished steers for the EU market. Steers are assumed marketed at 620 kg live weight (340 kg HSCW and 14 mm P8 fat depth) at 24 months of age. Daughters are retained for breeding. There is no marbling requirement.

Notes: Heifers first calf. By SBT Indigo Y57 who would be 38 years old this year. We do this every so often. Use a very good old sire to see how we are going. A good long bull with a head and a good skin. His numbers wont be flash as Breedplan doesn't seem to be able to handle good stock from before their time. He looks pretty good in amongst his peers.

BEST QUOTE OF AN ERA

*"The Budget should be balanced,
the Treasury should be refilled,
public debt should be reduced,
the arrogance of officialdom should be tempered and controlled,
and the assistance to foreign lands should be curtailed,
lest Rome will become bankrupt.
People must again learn to work instead of living on public assistance."*

- CICERO, 55BC

**So, evidently we've learned bugger all over the last
2,060 years.**

HOW TO REGISTER with ELITE LIVESTOCK AUCTIONS

Welcome to the new age of
selling livestock in Australia and
"Happy Bidding"

- 1  Simply go to
www.elitelivestockauctions.com.au
using your desktop,
laptop, iPad, iPhone or
android device
- 2  Click on the
"Sign Up" page / link
- 3  Create a bidding
profile using the bidder
registration page.
(You can either register as a
livestock agent, company or
private buyer.)
- 4  Agree to the Elite
Livestock Auctions
Terms & Conditions
and the Selling
Agents Sale Terms
& Conditions as
printed in the official
Sale Catalogue
- 5  Click "Register"
- 6  You will then be
notified by email
that an account has
been created

- 7  Once an account has
been created you are
all "Set to Bid"
- 8  Each auction can then
be viewed by clicking
"Live Auction" logo
on the Elite Livestock
Auctions website
- 9  Once you receive
email notification that
your account has been
created please go to
the sale you wish to
bid at and click
"Request to Bid"
- 10  The sale agents will
then approve your
application to bid and
on the sale catalogue
you will see "✓ Bid
Request Approved"
- 11  On Sale day simply
login, click "Enter
Auction" on the
catalogue page and
you can start bidding.
(There is no need for
software download)
- 12  At the completion of
the auction, invoicing
will be carried out as
per your registration
details by the Selling
Agents.

THE FARMER'S PLIGHT

**IT ALL STARTED BACK IN '66 WHEN THEY
CHANGED FROM POUNDS TO DOLLARS -
MY OVERDRAFT DOUBLED**

**I WAS JUST GETTING USED TO THIS WHEN THEY
BOUGHT IN KILOGRAMS INSTEAD OF POUNDS AND,
MY WOOL CLIP DROPPED BY HALF**

**THEN THEY CHANGED RAIN TO MILLIMETRES
AND WE HAVEN'T HAD AN INCH OF RAIN SINCE!
SO, WHAT DO THEY DO? THEY BRING IN A
THING CALLED CELSIUS AND IT NEVER GETS
HOTTER THAN 40 DEGREES IN MID-SUMMER
NO WONDER ME WHEAT WON'T GROW**

**IF THAT WASN'T ENOUGH THEY HAD TO
CHANGE US OVER FROM ACRES TO HECTARES
AND I END UP WITH HALF THE LAND I THOUGHT
I HAD. SO ONE DAY I SAT DOWN AND HAD A
THINK. I RECKON THAT WITH DAYLIGHT SAVING
I WAS WORKING SEVEN EXTRA HOURS A WEEK
FOR NOTHING.**

SO I DECIDED TO SELL OUT

**TO CAP IT ALL OFF, I JUST GOT THE PLACE IN THE
HANDS OF THE AGENT WHEN THEY CHANGED
FROM MILES TO KILOMETRES -
NOW I'M TOO FAR OUT OF TOWN FOR
ANYONE TO BUY THE BLUDDY PLACE!**

Cows and calves.

Calves

Ruby runs them in . . .

. . . then Ruby looks after them.

Is that the right one Dad?
