Netter Pneumatic Turbine Vibrators Series NCT

- Rotary vibration
- Unrestricted, lubrication-free operation
- Nominal frequency from 4,900 min⁻¹ to 45,460 min⁻¹
- Centrifugal force from 288 N to 8,659 N
- Frequency continuously adjustable by means of air pressure
- Reduced noise level
- Maintenance-free due to continuously lubricated rolling bearing
- Available in ATEX conform or in stainless steel versions

Sifting of fine grained products

Applications

Series NCT pneumatic turbine vibrators are particularly suitable for moving bulk materials. They can be used for emptying bunkers, driving chutes, sieves and vibrating tables and for the mechanical stimulation of processes.

Special features of the NCT vibrators are high frequency at low noise level and low air consumption.

Design and functioning principle

The rotary vibration is produced by an eccentrically mounted turbine with integrated unbalance masses. The frequency and therefore the centrifugal force can be continuously regulated via the operating pressure.

A directional control valve is necessary for operation (not supplied).

ATEX conform series NCT turbine vibrators and units with stainless steel housings are available.

Permissible operating conditions

Drive medium:

Compressed air or nitrogen (filter ≤ 5µm), preferably with oil mist

Operating pressure:

200 kPa to 600 kPa

Ambient temperature:

-20°C to 120°C

VSS offers the accessories required for mounting, installation and control of vibrators and interval impactors.

VSS provides solutions.
