

Environmental Sustainability Statement

SCC (SA) Pty Ltd is serious about its environmental responsibilities. Since 2000, we have endeavoured to use suppliers of cleaning products that are committed to their approach in producing and supplying products that have minimal environmental impact. SCC suppliers must demonstrate a strong commitment to research and development to continually improve their products and reduce environmental impacts. SCC is committed to supplying and using environmentally friendly green products on all of our sites.

All suppliers are expected to have a life cycle analysis which assesses environmental impacts associated with all stages of a products life from raw materials to recycling:

- Using the safest raw materials conforming to statutory environmental requirements.
- Biodegradable formulations.
- Not using phosphates.
- Increasing the use of natural, replenishable organic raw materials if safe and economical.
- Supplying concentrated products which are diluted and save on transport costs and pollution.
- Using trigger and squirt bottles and not aerosols.
- Packaging made of recycling materials.
- Re use and recycling of empty containers.

Over the last 5 years SCC has reduced its primary cleaning product to three main cleaning products. This means SCC is using the most diverse and effective products available which has helped with the safety of our staff, cleaning performance, reducing wastage, eliminating hazardous chemicals, environmental impacts and storage.
