

First [download the Perfect Player](#) on your device.

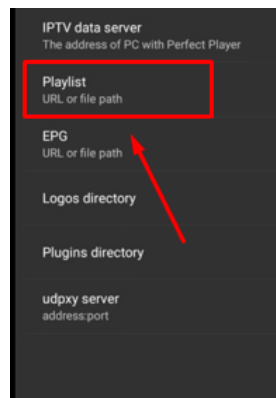

Open the Player when started go to [setup](#) and press the [cogwheel for settings](#)

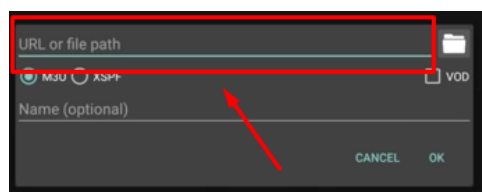

Choose [General](#):

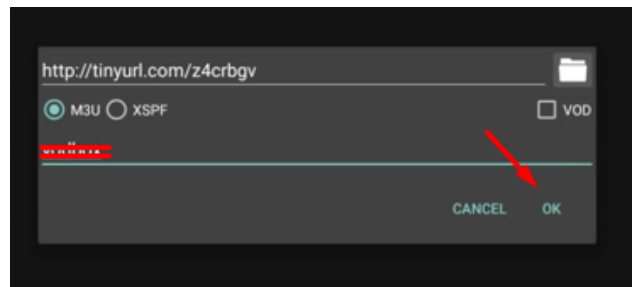

Select [playlist](#):

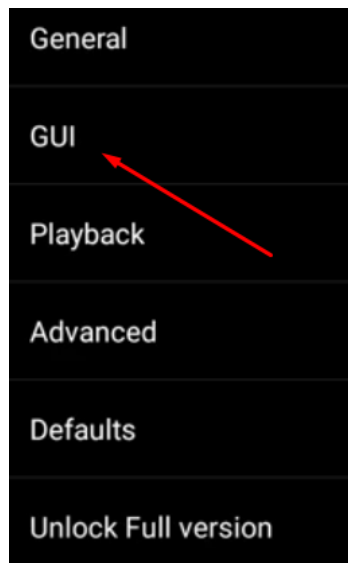

Copy past your m3u link or shorten the link with [bit.ly](#) or other site.

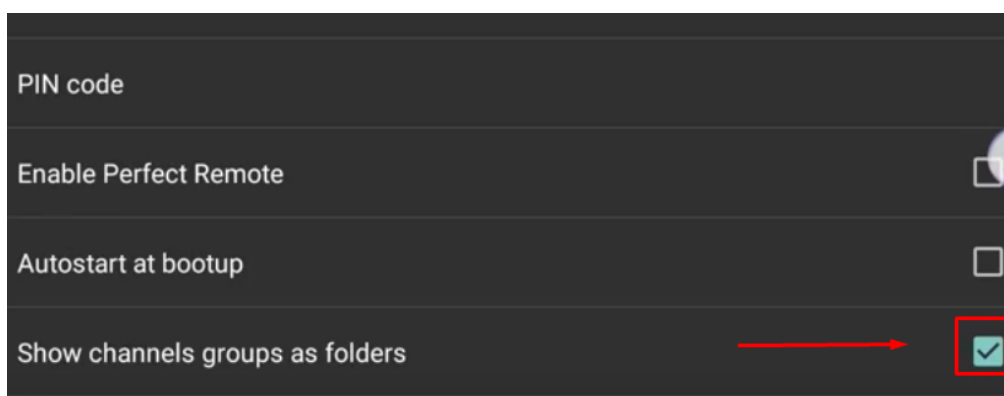

When you have filled it in , press **Ok**

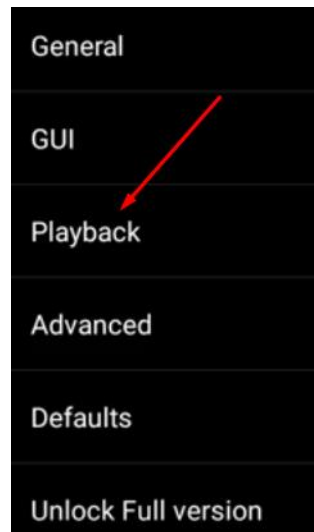

Select **GUI**.

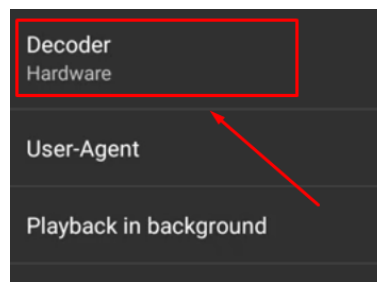

Tag the box next to **show channels groups as folder**

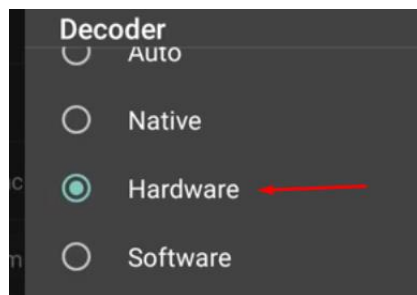

Go back, and press Playback:

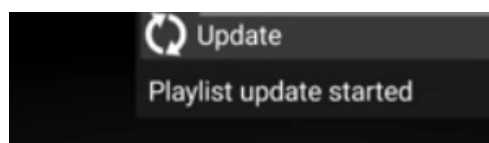

choose decoder.

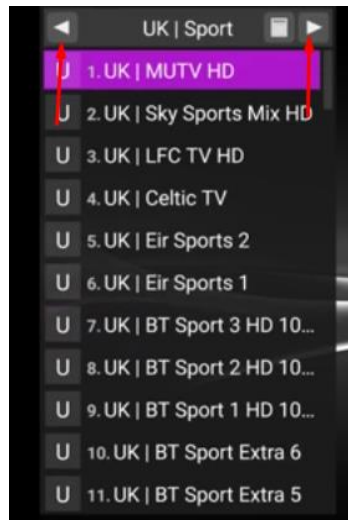

and choose for hardware, this option is different on every box. the most can work great on hardware for some the software part is better, you can try it and chage when you want.

Press back 2 time, and you will see that the program is updating the channel list:

when the channel list is loaded, you can change the channel groups with the arrows. and channel by going up and down.

when a channel is playing **press ok, up or down** to get back in the channel list.
