Filler Consultation Form

About the treatment.

The Hyaluron Pen is a simplistic device, used for generations, that generates enough pressure to push the mixture into the skin. The mixture is made up of Hyaluronic Acid and Lydocaine. Hyaluronic acid is found in the body, it is totally safe as the human body makes the exact same chemical. There are no allergic reactions or complications from this substance. It works by retaining the water in the skin to leave it appearing plumper and more youthful.

Prior to Treatment.

- No Make-Up
- Medications, e.g. painkillers or blood thinners should be avoided 48 hours prior.
- No alcohol 48 hours prior.
- Avoid products that contain Retin A such as Tretinoin 3 days prior.
- Waxing, bleaching, tweezing or hair removal 3 days prior.
- Avoid AHA products prior and to reduce usage of anti-aging products on area for 2 weeks prior.
- Primrose oil, Garlic, Ginko Blioba, Ginseng or Vit.E should not be used 1 week prior.

It is advised not to donate blood prior or after appointment for 24 hours.

You must wait 2 weeks in-between filler treatments.
Medical History

- Are you breast feeding or pregnant? Yes / No
- Do you have a history of severe allergy/ anaphylaxis? Yes / No
  If yes please give more detail.

- Are you currently receiving any medical treatment? Yes / No
  If yes please give more detail.

- Have you previously received any anaesthetic treatments (e.g laser, peels, dermabrasion, etc)? Yes / No
  If yes please give more detail.

- Have you had any treatment with dermal fillers, absorbable dermal fillers, Semi-permanent dermal fillers or botulinum toxin? Yes / No
  If yes please give more detail.

- Have you ever suffered from auto-immune disease or disease affecting the immune system? Yes / No
- Do you have any cutaneous (skin) infections or inflammatory problems (e.g. herpes-cold sores, acne etc)? Yes / No
- Are you currently taking any steroids, aspirin or anticoagulant (e.g. warfarin ect)? Yes / No
- Do you suffer from acute rheumatic fever or recurrent sore throat? Yes / No
- Do you suffer from any allergies, particularly allergies to hyaluronic acid, amide type local anaesthetics or lidocaine? Yes / No
- Do you suffer from untreated epilepsy? Yes / No
- Do you tend to develop hypertrophic scaring? Yes / No
- Do you suffer from porphyria? Yes / No
- Do you suffer from cardiac conduction disorders? Yes / No
  If yes please give more details.

If the answer is yes to any of the above questions, your practitioner may ask for further details. Treatment may be refused if it is not in your own interest to proceed.
Advised Consent

I confirm I have been informed that:

The Dermalax plus range of products are inserted into the dermis to correct wrinkles, folds and lines of the face and skin or for lip augmentation. You should be aware that the combination of the Dermalax plus range with certain drugs that reduce or inhibit hepatic metabolism (cimetidine, beta-blockers etc.) is inadvisable. You should be made aware that this product contains 3mg/ml of lidocaine that may produce a positive result in anti-doping tests. Redness and swelling may occur during or after the procedure from the pressure/force of the insertion. This reaction may last a couple of hours. Rarely discolouration of the injection site, necrosis, abscess formation, granulomas, hypersensitivity has been reported although more with injection fillers.

If any of these symptoms persist for more than one week, or if any other side effects develop please report them to the practitioner as soon as possible so that they can advise on the best course of treatment. Whilst rare, such side-effects and their treatment may last for several months.

The aesthetic effects of the Dermalax plus range of products last for up to 4/6 months but will vary depending on the condition of the skin, area treated, amount of product inserted and lifestyle factors such as sun exposure, smoking, alcohol, water intake.

The average life of treatment in lips is less than in other areas because of the high vascularisation and action of the lip area. A touch-up procedure may be required 2 weeks after the first treatment and helps to optimise the results and maximise the duration of the results.

After treatment, please avoid extreme facial expressions, alcohol consumption and applying make up for 12 hours. Please avoid extreme sun exposure, UV Light, freezing temperatures and saunas for 1 week after treatment. You will be provided a copy of the after care advise to take home.

My treating healthcare professional has:

- Provided me with sufficient information about the treatment detailed in order to make an informed decision
- Given me the opportunity to ask all remaining questions I may have about the treatment, and has answered them to the best of their ability
- Given me the time to consider the treatment detailed overleaf
- Received the relevant medical history information from me to the best of my knowledge

I therefore consent to receiving the described treatment by my treating healthcare professional. I understand my information will be on record for 7 years in accordance with our insurance.

Signed:                                                                                                          Date:
