PermaTimber®
Eco Cladding Range

Original | WideBoard | WeatherLap

Sleek and modern, PermaTimber® is your low maintenance, composite, durable alternative to traditional fibre cement and weatherboard products.

Perma Composites® are the experts in composite timber. We've spent years researching, testing and developing products ensuring they are of the highest quality and durability. PermaTimber® is perfect for domestic and commercial applications.

The PermaTimber® Eco Cladding range is versatile, offering sleek designs which are able to be installed both horizontally and vertically. They can be applied to both new and existing structures, on walls as well as fences, and are ideal for all buildings due to their simplicity of installation and no ongoing maintenance.

Our Eco Cladding offers a flush and concealed fixing finish.

INSTALLATION

Recommended installation is onto either 25x50mm treated battens or aluminium/steel top hats, using 8g, 30 mm pan head screws. There must be at least 25mm clearance behind the cladding to allow for airflow. The area must be suitably waterproofed prior to installation.

Provision for adequate drainage and ventilation must be made along with installation of a waterproof membrane / system prior to the cladding being installed.

More information on installation can be found in our video and guide at permatimber.com.au.

COLOUR RANGE

We offer you a spectacular custom colour palette. Bespoke colours and custom profiles are available for larger quantity orders, knowing that whatever you design, we can create.

PermaTimber® contains natural timber elements. As you would be aware, timber has different natural appearances and to ensure PermaTimber® does indeed look like timber, it may also experience similar variations in colour, tone, and grain.

As a result of this Perma Composites® may have natural variations in each decking board, cladding, screening and bespoke profile and in some instances a slight difference between samples and final colour.

The customer / installer is responsible for inspecting each decking board, cladding, screening and bespoke profile for colour, finish, size and other quality issues prior to installation

Colours shown are representative only. Colour samples are available on request. Due to PermaTimber® having natural timber elements, there may be slight colour variances between different composite timber cladding batches. Should you have a large project, it is recommended that all requirements are ordered at once to avoid any chance of colour variances.
